New Waterscapes:

New Waterscapes Herbert Dreiseitl, Dieter Grau, 2005 *Modernist Waterscapes* Marlene Dirschauer, 2023-01-04 This book identifies water as the key element of Virginia Woolf's modernist poetics. The various forms, movements and properties of water inspired Woolf's writing of reality, time and bodies and offered her an apt medium to reflect on the possibilities as well as on the exhaustion of her art. As a deeply intertextual writer, Woolf recognised how profoundly water has shaped human imagination and the landscape of the literary past. In line with recent ecocritical and ecofeminist assessments of her works, this book also shows Woolf's attraction to water as part of an indifferent nature that exists prior to and beyond the symbolic. Through close analyses that span the whole of Woolf's oeuvre and that centre on the metaphorical and the material voices of water in her works, *Modernist Waterscapes* offers a fresh perspective on a writing that is as versatile as the element from which it draws. The monograph addresses postgraduate students and scholars working in modernist studies and Woolf studies in particular.

Urban Mountain Waterscapes in Leh, Indian Trans-Himalaya Judith Müller, 2022-11-16 The city of Leh is located in the high mountain desert of Ladakh in the Indian Himalayas and access to water has always been limited there. In recent years, the town has experienced high rates of urbanisation on the one hand and tourist numbers have increased exponentially on the other, which has implications for the water supply of the people living there. Through several years of on-site research, challenges on various levels were documented and current governance approaches were analysed. This research forms the basis for future approaches to sustainable development.

Contested Waterscapes in the Mekong Region François Molle, Tira Foran, Mira Kakonen, 2012 The water resources of the Mekong river catchment area from China through Thailand, Cambodia and Laos to Vietnam are increasingly contested. Governments, companies and banks are driving new investment in roads, dams, diversions, irrigation schemes, navigation facilities, power plants and other emblems of conventional development. Their plans and interventions pose multiple burdens and risks to the livelihoods of millions of people dependent on wetlands, floodplains, fisheries and aquatic resources.

Divided Environments Jan Selby, Gabrielle Daoust, Clemens Hoffmann, 2022-09-22 What are the implications of climate change for twenty-first century conflict and security? Rising temperatures, it is often said, will bring increased drought, more famine, heightened social vulnerability and large-scale political and violent conflict. Indeed, many claim that this future is already with us. *Divided Environments* however shows that this is mistaken. Focusing especially on the links between climate change, water and security and drawing on detailed evidence from Israel, Palestine, Syria, Sudan and elsewhere, it shows both that mainstream environmental security narratives are misleading and that the actual security implications of climate change are very different from how they are often imagined. Addressing themes as wide-ranging as the politics of droughts, the contradictions of capitalist development and the role of racism in environmental change while simultaneously articulating an original international political ecology approach to the study of socio-environmental conflicts, *Divided Environments* offers a new and important interpretation of our
