Polymer Composites and Polymeric Materials ,1998 Polymer Composites and Polymeric Materials for Energy Management and Occupant Safety Society of Automotive Engineers,1999 **Automotive Application of Polymers II** A.N.A. Elliott,1991-12 This Rapra Review Report looks at the major applications of polymers in automotives excluding tyres and describes the reasons behind their adoption and development with many examples drawn from the European US and Japanese car industries The review and the 395 abstracts provided from the Rapra Polymer Library database refer primarily to developments since 1987 Properties and Performance of Natural-Fibre Composites Kim Pickering,2008-06-23 Concern about global warming has led to renewed interest in the more sustainable use of natural fibres in composite materials This important book reviews the wealth of recent research into improving the mechanical properties of natural fibre thermoplastic composites so that they can be more widely used The first part of the book provides an overview of the main types of natural fibres used in composites how they are processed and in particular the way the fibre matrix interface can be engineered to improve performance Part two discusses the increasing use of natural fibre composites in such areas as automotive and structural engineering packaging and the energy sector The final part of the book discusses ways of assessing the mechanical performance of natural fibre composites With its distinguished editor and team of contributors Properties and performance of natural fibre composites is a valuable reference for all those using these important materials in such areas as automotive and structural engineering Provides an overview of the types of natural fibres used in composites Discusses fibre matrix interface and how it can be engineered to improve performance Examines the increasing use of natural fibre composites in automotive and structural engineering and the packaging and energy sector **Composites for Automotive Applications** C. D. Rudd,2000 Various factors in the automotive sector have combined to create a favourable climate for the development of materials and fabrication techniques for polymer based composite body panels and structures The cond104 in which composites are used within the automotive industry has been reviewed in this report and those materials and processes that are used in the fabrication of components and structures are described in detail For this reason this report is essential reading for the composites plastics industries and the land transport automotive sectors An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading **Handbook of Polypropylene and Polypropylene Composites, Revised and Expanded** Harutun Karian,2003-03-25 Building on the success of its predecessor with completely revised material and six new chapters the Handbook of Polypropylene and Polypropylene Composites Second Edition responds to increasing interest and changing global trends in the manufacture and application of polypropylene resin The authors highlight viable options for the manufacture of polypropylene composites to better accommodate market requirements across various industries The second edition introduces chapters on high purity submicron talc fillers with lamellar microstructures the utilization of Wollastonite
