Realizing the Potential of C4I: Fundamental Challenges, 1999 Section 262 of the Defense Authorization Act for Fiscal Year 1996 directed the Secretary of Defense to request that the National Research Council conduct a review of current and planned service and defense wide programs for command control communications computers and intelligence C4I with a special focus on cross service and inter service issues For purposes of this report C4I systems include systems designed to support a

commander's exercise of command and control across the range of military operations and to generate information and knowledge about an adversary and friendly forces. Although the Cold War is over, new regional threats to U.S. interests are increasingly likely. The U.S. military in its traditional role as an instrument of national power will be required to deal with a more varied set of military tasks and missions, helping to both establish and maintain regional peace and stability and also coping with less traditional tasks such as humanitarian relief and disaster recovery. Budget pressures have already resulted in a significantly reduced force structure and withdrawal of U.S. military presence from many overseas locations. Joint operations are now the norm, and in many cases U.S. military operations are combined with those of allied and coalition forces. Forces responding to contingencies are likely to be employed as they are with only minimal time for preparation and deployment before entering the operational phase of a contingency. The military that must play these roles has many different C4I systems, both old and new. Older systems often were built for single purpose, stand alone applications and often rely heavily on military specific technology. In contrast, current systems are increasingly being built to meet explicit requirements for interoperability and flexibility, and the Department of Defense has been increasingly capitalizing on commercial information technologies for C4I systems.

A Review of the FBI's Trilogy Information Technology Modernization Program National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the FBI's Trilogy Information Technology Modernization Program, 2004-06-10. The Federal Bureau of Investigation (FBI) is in the process of developing a modern information technology (IT) system, the Trilogy program, that is designed to provide a high speed network, modern workstations and software, and an application, the Virtual Case File (VCF), to enhance the ability of agents to organize, access, and analyze information. Implementation of this system has encountered substantial difficulties, however, and has been the subject of much investigation and congressional concern. To help address these problems, the FBI asked the National Research Council (NRC) to undertake a quick review of the program and the progress that has been made to date. This report presents that review. The current status of four major aspects of the program, the enterprise architecture, system design, program management, and human resources, are discussed, and recommendations are presented to address the problems.

Cybersecurity Today and Tomorrow National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, 2002-04-12. This report reviews past NRC studies that have examined various dimensions of computer and network security and vulnerability and brings the results forward into the context of the current environment of security and vulnerability. The review includes work done since 1991, such as *Computers at Risk* (1991), *Cryptography's Role in Securing the Information Society* (1996), *For the Record: Protecting Electronic Health Information* (1997), *Trust in Cyberspace* (1999), *Continued Review of the Tax Systems Modernization of the Internal Revenue Service* (1996), *Realizing the Potential of C4I* (1999), and *Embedded Everywhere* (2001).

Trillions for Military Technology J. Alic, 2007-09-03. *Trillions for Military Technology* explains why the weapons purchased

by the U S Department of Defense cost so much why it takes decades to get them into production even as innovation in the civilian economy becomes ever more frenetic and why some of those weapons don t work very well despite expenditures of many billions of dollars It also explains what do about these problems The author argues that the internal politics of the armed services make weapons acquisition almost unmanageable Solutions require empowering civilian officials and reforms that will bring choice of weapons into the sunshine of public debate
