Recent Advances In Field Theory And Statistical Mechanics:

Recent advances in field theory and statistical mechanics, 1984 Recent Advances in Field Theory P. Binétruy, G. Girardi, P. Sorba, 2016-06-03 Recent Advances in Field Theory presents the proceedings of the Fourth Annecy Meeting on Theoretical Physics held in Annecy le Vieux France on March 5 9 1990 This book presents several relevant developments on the subject including quantum algebra two dimensional quantum gravity and topological quantum theories Organized into 29 chapters this book begins with an overview of the Hamiltonian quantization of the topological Chern Simons theory This text then examines the conformal affine Liouville model Other chapters consider the global analyticity properties of functions correlated with causal kernels on de Sitter space This book discusses as well the three particle models in terms of noncommutative gauge theory namely the Peccei Quinn model the Glashow Weinberg Salam model and the standard model The final chapter deals with the development on the construction of lattice integrable models corresponding to the SU N coset conformal field theories This book is a valuable resource for physicists and scientists

Topology and Geometry in Physics Eike Bick, 2005-01-18 Application of the concepts and methods of topology and geometry have led to a deeper understanding of many crucial aspects in condensed matter physics cosmology gravity and particle physics This book can be considered an advanced textbook on modern applications and recent developments in these fields of physical research Written as a set of largely self contained extensive lectures the book gives an introduction to topological concepts in gauge theories BRST quantization chiral anomalies supersymmetric solitons and noncommutative geometry It will be of benefit to postgraduate students educating newcomers to the field and lecturers looking for advanced material

Recent Developments in Quantum Field Theory J. Ambjorn, B.J. Durhuus, J.L. Petersen, 2012-12-02 Theoretical particle physicists discuss the present status and in particular the latest developments in quantum field theory in their broadest aspects This volume contains the main lectures presented at the symposium and reflects the contemporary status of a line of development one of whose initiators was Niels Bohr

Field Theory, Disorder and Simulations Giorgio Parisi, 1992 This volume is a collection of lectures and selected papers by Giorgio Parisi on the subjects of Field Theory perturbative expansions nonperturbative phenomena and phase transitions Disordered Systems mainly spin glasses and Computer Simulations lattice gauge theories The basic problems discussed in the Field Theory section concern the interplay between perturbation theory and nonperturbative phenomena which are present when one deals with infrared or ultraviolet divergences or with nonconvergent perturbative expansions The section on Disordered Systems contains a complete discussion about the replica method and its probabilistic interpretation and also includes a short paper on multifractals In the Simulations section there is a series of lectures devoted to the study of quantum chromodynamics and a review paper on simulations in complex systems The works of Giorgio Parisi have repeatedly displayed a remarkable depth of originality and innovation and have paved the way for new research in many areas This personal selection of his lectures and papers complete with an original introduction

by him undoubtedly serves as a vital reference book for physicists and mathematicians working in these fields

Soft Interfaces Lydéric Bocquet, David Quéré, Thomas A. Witten, Leticia F. Cugliandolo, 2017-09-22 Many of the distinctive and useful phenomena of soft matter come from its interaction with interfaces Examples are the peeling of a strip of adhesive tape the coating of a surface the curling of a fiber via capillary forces or the collapse of a porous sponge These interfacial phenomena are distinct from the intrinsic behavior of a soft material like a gel or a microemulsion Yet many forms of interfacial phenomena can be understood via common principles valid for many forms of soft matter Our goal in organizing this school was to give students a grasp of these common principles and their many ramifications and possibilities The Les Houches Summer School comprised over fifty 90 minute lectures over four weeks Four four lecture courses by Howard Stone Michael Cates David Nelson and L Mahadevan served as an anchor for the program A number of shorter courses and seminars rounded out the school This volume collects the lecture notes of the school

Strongly Interacting Quantum Systems out of Equilibrium Thierry Giamarchi, Andrew J. Millis, Olivier Parcollet, Hubert Saleur, Leticia F. Cugliandolo, 2016-07-07 Over the last decade new experimental tools and theoretical concepts are providing new insights into collective nonequilibrium behavior of quantum systems The exquisite control provided by laser trapping and cooling techniques allows us to observe the behavior of condensed bose and degenerate Fermi gases under nonequilibrium drive or after quenches in which a Hamiltonian parameter is suddenly or slowly changed On the solid state front high intensity short time pulses and fast femtosecond probes allow solids to be put into highly excited states and probed before relaxation and dissipation occur Experimental developments are matched by progress in theoretical techniques ranging from exact solutions of strongly interacting nonequilibrium models to new approaches to nonequilibrium numerics The summer school Strongly interacting quantum systems out of equilibrium held at the Les Houches School of Physics as its XCIX session was designed to summarize this progress lay out the open questions and define directions for future work This books collects the lecture notes of the main courses given in this summer school

Theoretical Physics to Face the Challenge of LHC Laurent Baulieu, Michael R. Douglas, Karim Benakli, Bruno Mansoulié, Eliezer Rabinovici, Leticia F. Cugliandolo, 2015 The book gathers the lecture notes of the Les Houches Summer School that was held in August 2011 for an audience of advanced graduate students and post doctoral fellows in particle physics theoretical physics and cosmology areas where new experimental results were on the verge of being discovered at CERN Every Les Houches School has its own distinct character This one was held during a summer of great anticipation that at any moment contact might be made with the most recent theories of the nature of the fundamental forces and the structure of space time In fact during the session the long anticipated discovery of the Higgs particle was announced The book vividly describes the fruitful and healthy schizophrenia that is the rule among the community of theoreticians who have split into several components those doing phenomenology and those dealing with highly theoretical problems with a few trying to bridge both domains The lectures by theoreticians covered many directions

in the theory of elementary particles from classics such as the Supersymmetric Standard Model to very recent ideas such as the relation between black holes hydrodynamics and gauge gravity duality The lectures by experimentalists explained in detail how intensively and how precisely the LHC collider has verified the theoretical predictions of the Standard Model predictions that were at the front lines of experimental discovery during the 70 s 80 s and 90 s and how the LHC is ready to make new discoveries They described many of the ingenious and pioneering techniques developed at CERN for the detection and the data analysis of billions of billions of proton proton collisions

Quantum Optics and Nanophotonics Claude Fabre,Vahid Sandoghdar,Nicolas Treps,Leticia F. Cugliandolo,2017-09-15 Quantum Optics and Nanophotonics consists of the lecture notes of the Les Houches Summer School 101 held in August 2013 Some of the most eminent experts in this flourishing area of research have contributed chapters lying at the intersection of basic quantum science and advanced nanotechnology The book is part of the renowned series of tutorial books that contain the lecture notes of all the Les Houches Summer Schools since the 1950 s and cover the latest developments in physics and related fields

Many-Body Physics with Ultracold Gases Christophe Salomon,Georgy V. Shlyapnikov,Leticia F. Cugliandolo,2013 This book provides authoritative tutorials on the most recent achievements in the field of quantum gases at the interface between atomic physics and quantum optics condensed matter physics nuclear and high energy physics non linear physics and quantum information
