Recent Advances in Prostaglandin, Thromboxane, and Leukotriene Research Helmut Sinzinger, Bengt Samuelsson, Sir John R. Vane, Rodolfo Paoletti, Peter Ramwell, Patrick Y-K Wong, 2013-11-11 The International Symposium on Prostaglandins and Related Compounds first held in Vienna 1972 revisited the city after 24 years for the 10TH Symposium For the many researchers working in this multi disciplinary field it was an opportunity to exchange their experiences and share new data with colleagues from all around the world This scientific exchange was largely encouraged by the unseasonably cold and rainy weather For the first time there was quite a large attendance from the former Communist countries Eugene Garfield prepared a key note address delivered during the meeting The Scientist 1996 12 reviewing the contribution of the Nobel Laureates U S von Euler l R Vane S K Bergstrom and B I Samuelsson discussing the relevance of the more than 40 000 papers in this area published since 1991 Overall there is still a rapidly growing interest and in particular a great variety of clinical applications of this family of compounds which were discussed in detail during the meeting Beside the lectures there were 19 workshops covering nearly all the topics of key interest All the speakers were invited to prepare a manuscript which has resulted in the volume now in your hands Special thanks to Dr Patrick Wong and the new publisher of this series who helped to publish the proceedings in the usual quality and reasonable period of time Looking forward to seeing all of you again in Florence in 1999 hopefully with much more sun

Recent Developments in Alcoholism Marc Galanter, 2012-12-06 From the President of the Research Society on Alcoholism Alcohol research has entered an era of growth which brings enhanced optimism regarding the elucidation of the biochemical and psychosocial factors which combine to produce the phenomena of alcohol abuse and alcoholism The solidification of knowledge regarding the genetic determinants of certain alcohol related problems puts on firm footing the biological approaches for developing solutions to these problems The current volume of Recent Developments in Alcoholism contains an excellent blend of information both on studies assessing the behavioral and physiological variables which may be genetically linked to an individual's risk of developing problems with alcohol and on clinical and basic science investigations of the pathological consequences of excessive ethanol ingestion Further progress in the alcoholism research area will continue to require investigation of the interactions of environmental variables with the genetically determined biology of an individual Novel techniques in the fields of molecular genetics physical chemistry and behavioral pharmacology are being brought to bear on the central issues in the field and the addition of these tools to the science of alcohol research brings closer the prospect of fruitful clinical application of our basic knowledge The Research Society on Alcoholism remains devoted to the task of promoting the generation of knowledge regarding the actions of alcohol and the mechanisms which produce alcohol abuse and alcoholism
