Lung Inflammation in Health and Disease, Volume I Yong-Xiao Wang, 2021-03-31 Respiratory diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma the most common chronic disease Each year tens of millions of people develop and can die from from respiratory infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for those affected Current treatment options for lung disease are neither effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field particularly in understanding the molecular geneses regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics

Smoking and Lung Inflammation Thomas J. Rogers, Gerard J. Criner, William D. Cornwell, 2013-10-12 Smoking and Lung

Inflammation is the first book directly related to chronic lung inflammation of its kind in several respects First the it focuses on both basic and clinical research on COPD and the inflammatory mechanisms that function in these diseases Second it is unique with respect to scope of the discussion of the unusual characteristics of the immune response which occurs in these patients Third it includes knowledge being gained from translational research conducted through clinical trials at several Medical Schools in the United States Not only is this research providing information about novel drugs and therapies but it is also advancing our understanding of the genetics of these diseases This work will illuminate the molecular basis for these diseases and hopefully will permit us to individualize the therapies for these diseases

Chronic Obstructive Pulmonary Disease Derek J. Chadwick, Jamie A. Goode, 2001-01-25 Chronic obstructive pulmonary disease COPD is the most common respiratory disorder of adults in the developed world and is the fourth main cause of death in the USA It is also associated with high morbidity and poses an enormous burden of suffering and expense Despite this the disease has received little attention compared with other respiratory conditions such as asthma and lung cancer Current treatment can offer some marginal symptomatic relief but does not address the underlying disease process Indeed smoking cessation is the only intervention known to alter the rate of disease progression There is clearly great need and potential for the development of superior therapies for symptomatic relief and disease modification This book brings together leading researchers and physicians to discuss the most recent advances in our understanding of COPD and draws together basic and clinical aspects relevant to the topic Coverage includes the basic pathology current and potential therapies and detailed consideration of the major theories for the pathogenesis of COPD

Lung Inflammation in Health and Disease, Volume II Yong-Xiao Wang, 2021-05-21 Lung diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma Each year tens of millions of people develop and can die from lung infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for some patients Current treatment options for lung disease are neither always effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field particularly in understanding the molecular geneses regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive

prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics

Chronic Obstructive Pulmonary Disease Hiroyuki Nakamura,Kazutetsu Aoshiba,2016-10-31 This book considers chronic obstructive pulmonary disease COPD not as a simple inflammation of the lung but as a systemic inflammatory disease Beginning with epidemiological studies etiology diagnosis and treatment it elaborates further illustrating some comorbidities and associations with other respiratory diseases As such it provides numerous improved and more comprehensive treatment methods including drug therapies as well as some non drug therapies There are also chapters describing the pathogenesis genetic abnormalities and newly discovered pathogenetic mechanisms that are expected to be studied further in the future Edited and written by pioneering researchers each chapter summarizes the latest trends describes future prospects and explores the unresolved and critical questions Chronic Obstructive Pulmonary Disease A Systemic Inflammatory Disease is a valuable resource to beginning researchers physicians engaged in clinical practice supervisors and basic researchers whose work includes COPD

COPD Cormac McCarthy,2018-02-21 Chronic obstructive pulmonary disease COPD is a major cause of morbidity and mortality worldwide and is estimated to become the third most common cause of death over the next decade The knowledge of COPD pathogenesis and the disease course has greatly improved this progression in understanding and continues to have significant implications in the management of this condition Novel areas of interest in COPD pathogenesis include further development of animal models a better understanding of the genetics and epigenetics the role of the microbiome and an increasing appreciation of the associated comorbidities This book intends to provide the reader with a brief overview of these topics and also provide an in depth review of the current nonpharmacological clinical approaches to managing patients with COPD

Inflammatory Disorders Mieczyslaw Pokorski,2014-11-22 The mechanistic

basis of chronic inflammation remains unclear The research sheds new light on the immune cells expressing the activation markers HLA DR and regulatory T cells Tregs and the cells expressing Siglec receptors as being key players in the immune system responsiveness to antigens and thus in lung tissue damage of chronic inflammation The results help understand the mechanisms of action of common drugs used in COPD such as formoterol tiotropium or corticosteroids and point to novel drug targets The chapters also deal with brain damaging effects by far unrecognized of inhaled corticosteroid therapy a time proven management of chronic inflammatory airway conditions asthma being a case in point Novel methods likely less producing side effects of macrolide antibiotics administration by inhalation are discussed emphasizing not only bacteriostatic but also anti inflammatory action
