Rna Biochemistry And Biotechnology:

RNA Biochemistry and Biotechnology Jan Barciszewski, Brian F.C. Clark, 1999-08-31 RNA Biochemistry and Biotechnology describes various aspects of nucleic acid and protein structure mainly RNA structure and proteins interacting with specific RNA species Papers deal with DNA protein interactions telomerase aminoacyl tRNA synthetases elongation factor Tu DNA repair RNA structure NMR technology RNA aptamer interaction of biological macromolecules with metal ions Two papers deal with theoretical aspects of RNA structure production and computer modelling Many papers describe the possibility of commercial application of RNA biotechnology One article discusses the impact of direct democracy on basic science supporting biotechnology Readership Advanced graduate students Ph D students and young scientists as well as specialists in the field RNA biochemistry & biotechnology, 1998 *RNA Nanotechnology and Therapeutics* Peixuan Guo, Kirill A. Afonin, 2022-07-18 Interest in RNA nanotechnology has increased in recent years as recognition of its potential for applications in nanomedicine has grown Edited by the world's foremost experts in nanomedicine this comprehensive state of the art reference details the latest research developments and challenges in the biophysical and single molecule approaches in RNA nanotechnology In addition the text also provides in depth discussions of RNA structure for nanoparticle construction RNA computation and modeling single molecule imaging of RNA RNA nanoparticle assembly RNA nanoparticles in therapeutics immunorecognition of RNA nanomaterials RNA chemistry for nanoparticle synthesis and conjugation and labeling Presents the latest research and discoveries in RNA nanotechnology Features contributions from world class experts in the field Covers RNA nanoparticles in therapeutics Describes self assembled RNA nanoparticles **Artificial Nucleases** Marina A. Zenkova, 2012-12-06 The development of agents capable of cleaving RNA and DNA has attracted considerable attention from researchers in the last few years because of the immediate and very important applications they can find in the emerging fields of biotechnology and pharmacology There are essentially two classes of these agents nucleases that occur naturally inside cells and synthetically produced artificial nucleases The first class includes protein enzyme nucleases and catalytic RNA structured ribozymes that perform cleavage of the phosphodiester bonds in nucleic acids according to a hydrolytic pathway in the course of different biochemical processes in the cell A different pathway is used by some antibiotics which cleave DNA via redox based mechanisms resulting in oxidative damage of nucleotide units and breakage of the DNA backbone The above molecules are indispensable tools for manipulating nucleic acids and processing RNA DNA cleaving antibiotics and cytotoxic ribonucleases have demonstrated utility as chemotherapeutic agents The second class artificial nucleases are rationally designed to imitate the active centers of natural enzymes by simple structures possessing minimal sets of the most important characteristics that are essential for catalysis A different approach in vitro selection was also used to create artificial RNA and DNA enzymes capable of cleaving RNA Being less efficient and specific as compared to the natural enzymes the primitive mimics are smaller and robust and can function in a broad range of conditions Handbook

of RNA Biochemistry Boston Carter,2023-09-19 Non coding RNAs ncRNAs are RNA molecules which are not translated into proteins They are classified into two types based on their length including short non coding RNAs comprising microRNAs miRNAs and long non coding RNAs lncRNAs They play a role in gene regulation at various levels ranging from epigenetic gene silencing to post transcriptional modulation of mRNA stability The ncRNAs contribute in the regulation of cell physiology and shape cellular functions They play an important role in brain development and function and are also associated with the pathogenesis of psychiatric disorders Several ncRNAs including circRNAs miRNAs and lncRNAs have been implicated in regulatory functions Furthermore they are believed to play a role in Alzheimer s disease and cancer This book explores all the important aspects of the biochemistry of RNA It presents researches and studies performed by experts across the globe The extensive content of this book provides the readers with a thorough understanding of this topic
