Road To Successful Crt Implantation A Stepbystep Approach:

The Road to Successful CRT Implantation Daniel Gras, Angel R. León, Westvy G. Fisher, 2008-04-15 Cardiac resynchronization therapy is a new therapy for advanced heart failure patients This therapy has been shown to improve quality of life exercise capacity NYHA classification and even reverse the detrimental reverse remodeling that occurs in advanced heart failure in patients already receiving optimal pharmacological therapy The typical patient has NYHA III IV HF symptoms a QRS 120 ms LVEDD 55 mm without any indication required for pacing The therapy is available in an ICD device too CRT has been shown to be effective in patients with both ischemic and non ischemic cardiomyopathy The implant procedure is part of a learning curve Many physicians who already perform electrophysiology procedures or PPM or ICD implants are the ideal implanters but are surprised at the challenges this implant presents This book will help flatten the learning curve for new physician implanting and will provide a guide for those who have already started implanting The success rate is about 90% so after 10 years of application we have found that there are still patients who do not get access to this great therapy because of the complexity of the patient's anatomy or physician skills The book is written by three authors with a great deal of experience culminating in over 3000 cases between them This book is intended for cardiologists who currently implant either or both pacemakers and cardioverter defibrillators with cardiac resynchronization therapy also called bi ventricular pacing or plan to implant in the future This book will be extremely useful for the new cardiologist in training who is learning to implant devices
