Nmr Spectroscopy Of Glycoconjugates:

NMR Spectroscopy of Glycoconjugates Jesús Jiménez-Barbero, Thomas Peters, 2003 NMR spectroscopy has been one of the most useful methods of analysing smaller molecules it is now an indispensable tool in determining the structure of complex biomolecules too In a clearly comprehensible manner the text summarizes the latest knowledge surrounding the use of NMR spectroscopy with such biologically important substance classes as polysaccharides glycoproteins and glycolipides as well as their interactions

NMR in Glycoscience and Glycotechnology Koichi Kato, Thomas Peters, 2017-05-15 This volume focuses on solution and solid state NMR of carbohydrates glycoproteins glyco technologies biomass and related topics It is estimated that at least 80% of all proteins are glycoproteins Because of the complexity heterogeneity and flexibility of the sugar chains the structural biology approaches for glycoconjugates have been generally avoided NMR techniques although well established for structural analyses of proteins and nucleic acids cannot be simply applied to this complex class of biomolecules Nonetheless recently developed NMR techniques for carbohydrates open the door to conformational studies of a variety of sugar chains of biological interest NMR studies on glycans will have significant impact on the development of vaccines adjuvants therapeutics biomarkers and on biomass regeneration In this volume the Editors have collected the most up to date NMR applications from experts in the field of carbohydrate NMR spectroscopy Timely and useful not only for NMR specialists it will appeal to researchers in the general field of structural biology biochemistry and biophysics molecular and cellular biology and material science

NMR Spectroscopy of Glycoconjugates Jesús Jiménez-Barbero, Thomas Peters, 2002-12-30 While for many years NMR spectroscopy was one of the most useful methods of analyzing smaller molecules nowadays it is an indispensable tool in determining the structure of complex biomolecules too One reason for this is not least the development of increasingly powerful appliances that enabled this complicated analysis using tiny amounts of the substances in the first place Just as the image of a 2D spectrum allows an insight into the spatial structure of a molecule the chronological examination of an NMR experiment enables the description of the molecular dynamics It is only by explaining such characteristics that we can really come to understand the functioning of biomolecules This book is neither a purely analytical nor bioorganic work and as such fills a gap for everybody working in determining the structure of carbohydrates and their conjugates In a clearly comprehensible manner the text summarizes the latest knowledge surrounding the use of NMR spectroscopy with such biologically important substance classes as polysaccharides glycoproteins and glycolipides Furthermore it provides an insight into the interactions with other biomolecules such as proteins nucleic acids or carbohydrates A valuable guide for all glucochemists
