R. John Williams

Shifting Gears Technology Literature Culture In Modernist America:

Shifting Gears Cecelia Tichi, 2017-10-01 *Shifting Gears* is a richly illustrated exploration of the American era of gear and girder technology. From the 1890s to the 1920s, machines and structures shaped by this technology emerged in many forms: from automobiles and harvesting machines to bridges and skyscrapers. The most casual onlooker to American life saw examples of the new technology on Main Street, on the local railway platform, and in the pages of popular magazines. A major consequence of this technology was its effect on the arts, in particular the literary arts. Three prominent American writers of the time, Ernest Hemingway, John Dos Passos, and William Carlos Williams, became designer-engineers of the word. Tichi reveals their use of prefabricated, manufactured components in poems and prose. As designers, they enacted in style and structure the new technological values. The writers, according to Tichi, thought of words themselves as objects for assembly into a design. Using materials from magazines, popular novels, movie reviews, the toy industry, and advertising, as well as the texts of the nation's major enduring writers, Tichi shows how the turn of the century technology pervaded every aspect of American culture and how this culture could be defined as a collaborative effort of the engineer, the architect, the fiction writer, and the poet. She demonstrates that a technological revolution is not a revolution only of science but of language as well. Originally published in 1987, *A UNC Press Enduring Edition*. UNC Press Enduring Editions use the latest in digital technology to make available again books from our distinguished backlist that were previously out of print. These editions are published unaltered from the original and are presented in affordable paperback formats, bringing readers both historical and cultural value. [Technology in America](#) Alan I. Marcus, Howard P. Segal, 2018-04-05

Now in a thoroughly updated new edition, this successful textbook surveys the history of technology in America from the 1600s to the 21st century. Alan I. Marcus and Howard P. Segal explore the effect society, culture, politics, and economics have had upon technological advances and place the evolution of American technology within the broader context of the development of systems such as transportation and communications. This unique book connects phenomena such as colonial printing presses with the American Revolution, early photographs with the creation of an allegedly unique American character, and high-tech advances in biotechnology with a growing desire for individual autonomy. This is an ideal resource for undergraduate and postgraduate students of the history of technology, the history of science, and American history.

Little Magazines & Modernism Adam McKible, 2016-12-05 Little magazines made modernism happen These pioneering enterprises were typically founded by individuals or small groups intent on publishing the experimental works or radical opinions of untried unpopular or underrepresented writers Recently little magazines have re emerged as an important critical tool for examining the local and material conditions that shaped modernism This volume reflects the diversity of Anglo American modernism with essays on avant garde literary political regional and African American little magazines It also presents a diversity of approaches to these magazines discussions of material practices and relations analyses of the relationship between little magazines and popular or elite audiences examinations of correspondences between texts and images feminist modifications of the traditional canon or histories and reflections on the emerging field of periodical studies All emphasize the primacy and materiality of little magazines With a preface by Mark Morrisson an afterword by Robert Scholes and an extensive bibliography of little magazine resources the collection serves both as an introduction to little magazines and a reconsideration of their integral role in the development of modernism

Technology Matters David E. Nye, 2007-08-24 Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters Technology matters writes David Nye because it is inseparable from being human We have used tools for more than 100 000 years and their central purpose has not always been to provide necessities People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks Perhaps this is because we are intimate with devices and machines from an early age as children we play with technological toys trucks cars stoves telephones model railroads Playstations Through these machines we imagine ourselves into a creative relationship with the world As adults we retain this technological playfulness with gadgets and appliances Blackberries cell phones GPS navigation systems in our cars We use technology to shape our world yet we think little about the choices we are making In Technology Matters Nye tackles ten central questions about our relationship to technology integrating a half century of ideas about technology into ten cogent and concise chapters with wide ranging historical examples from many societies He asks Can we define technology Does technology shape us or do we shape it Is technology inevitable or unpredictable Why do experts often fail to get it right How do historians understand it Are we using modern technology to create cultural uniformity or diversity To create abundance or an ecological crisis To destroy jobs or create new opportunities Should the market choose our technologies Do advanced technologies make us more secure or escalate dangers Does ubiquitous technology expand our mental horizons or encapsulate us in artifice These large questions may have no final answers yet but we need to wrestle with them to live them so that we may as Rilke puts it live along some distant day into the answers

Hubris and Hybrids Mikael Hård, Andrew Jamison, 2013-09-13 Human societies have not always taken on new technology in appropriate ways Innovations are double edged swords that transform relationships among people as

well as between human societies and the natural world Only through successful cultural appropriation can we manage to control the hubris that is fundamental to the innovative enterprising human spirit and only by becoming hybrids combining the human and the technological will we be able to make effective use of our scientific and technological achievements This broad cultural history of technology and science provides a range of stories and reflections about the past discussing areas such as film industrial design and alternative environmental technologies and including not only European and North American but also Asian examples to help resolve the contradictions of contemporary high tech civilization *Norman Bel Geddes* Nicolas P. Maffei, 2018-02-22 Norman Bel Geddes has long been considered the founder of American industrial design During his long career he worked on everything from theatre design world fairs and cars to houses and product and packaging design Nicolas P Maffei s magisterial biography draws on original material from the archive at the Harry Ransom Center University of Texas at Austin and places Bel Geddes work within the fast changing cultural and intellectual contexts of his time Maffei shows how Bel Geddes futuristic but pragmatic style his notion of practical vision was central to his work and highly influential on the professional practice of American industrial design in general **Ethics, Politics, and Whistleblowing in Engineering** Nicholas Sakellariou, Rania Milleron, 2018-11-09 The aim of this book is to generate a strong operational ethic in the work of engineers from all disciplines It provides numerous examples of engineers who sought to meet the highest ethical standards risking both professional and personal retaliations In short it presents the fields of engineering ethics in the context of actual conflict situations on the job and points to an urgent need for a strong ethical framework for the profession This book is about engineering students and practitioners truly understanding valuing and championing their wider critical role Ralph Nader the consumer advocate and champion of engineers wrote the preface Presents various viewpoints which hail from a wide variety of disciplines in the engineering science and technology communities Includes a mix of historical and contemporary examples a list of relevant television series and documentaries for engineers as well as links to informative websites for practicing engineers and engineering students Examines engineering professionalism as related to the imperative of sustainable development Provides numerous examples of corporate whistleblowing and ethical dilemmas in engineering Includes a foreword written by consumer advocate Ralph Nader **The Buddha in the Machine** R. John Williams, 2014-06-24 The writers and artists described in this book are joined by a desire to embrace Eastern aesthetics as a means of redeeming Western technoculture The assumption they all share is that at the core of modern Western culture there lies an originary and all encompassing philosophical error and that Asian art offers a way out of that awful matrix That desire this book attempts to demonstrate has informed Anglo and even Asian American debates about technology and art since the late nineteenth century and continues to skew our responses to our own technocultural environment
