

An aerial photograph of a coastline, showing waves breaking against a dark, rocky shore. The water is a deep blue-grey, and the shore is a lighter, textured grey. The perspective is from above, looking down at the ocean and the land.

Shifting Shores Rising Seas Retreating Coastlines:

Shifting Shores Jeff Hecht, 1990 Describes the various factors that change the shape of coastlines including storms natural erosion and rising sea levels Also discusses the future implications of these changes on coastal and low lying centers of population and what can be done to protect the coastlines and slow the process of change

Reading Programs for Young Adults Martha Seif Simpson, 2015-11-16 School and public libraries often provide programs and activities for children in preschool through the sixth grade but there is little available to young adults For them libraries become a place for work the place to research an assignment or find a book for a report but the thought of the library as a place for enjoyment is lost So how do librarians recapture the interest of teenagers This just might be the answer Here you will find theme based units such as Cartoon Cavalcade Log On at the Library Go in Style Cruising the Mall Space Shots Teens on TV and 44 others that are designed for young adults Each includes a display idea suggestions for local sponsorship of prizes a program game to encourage participation 10 theme related activities curriculum tie in activities sample questions for use in trivia games or scavenger hunts ideas for activity sheets a bibliography of related works and a list of theme related films The units are highly flexible allowing any public or school library to adapt them to their particular needs

Retreat from a Rising Sea Orrin H. Pilkey, Linda Pilkey-Jarvis, Keith C. Pilkey, 2016-05-24 This sobering examination of climate change and the disastrous effects of rising sea levels explains what must be done to avoid the worst outcomes By the end of this century hundreds of millions of people living at low elevations along coasts will be forced to retreat to higher and safer ground Because of sea level rise major storms will inundate areas farther inland and will lay waste to critical infrastructure such as water treatment and energy facilities creating vast irreversible pollution by decimating landfills and toxic waste sites *Retreat from a Rising Sea* explains in gripping terms what rising oceans will do to coastal cities detailing the specific threats faced by Miami New Orleans New York and Amsterdam This policy oriented book then lays out the drastic actions we must take now to remove vulnerable populations Aware of the overwhelming social political and economic challenges that would accompany effective action the authors consider the burden to the taxpayer and the logistics of moving landmarks and infrastructure including toxic waste sites They also show readers the alternative thousands of environmental refugees with no legitimate means to regain what they have lost The authors conclude with effective approaches for addressing climate change denialism and powerful arguments for reforming U S federal coastal management policies

Living with the Georgia Shore Tonya D. Clayton, 1992 The wide sandy beaches quiet maritime forests and vast Spartina marshes of the natural Georgia coast create a most spectacular albeit gentle Southern beauty Casual visitors and longtime residents alike have been charmed by this special place *Living with the Georgia Shore* provides an essential reference and guide for residents visitors developers planners and all who are concerned with the conditions and future of Georgia's coastal zone Recounting the human and natural history of the islands the authors look in particular at the phenomenon of coastal erosion and the implications of

various responses to this process In Georgia as elsewhere in the United States the future of the shore is in doubt as recreational and residential development demands increase This book provides guidelines for living with the shore as opposed to simply living on it The former requires planning and a wise choice of property or house site The latter ignores the potential hazards unique to coastal life and may make inadequate allowance for the dramatic changes that can occur on any sandy ocean shore Living with the Georgia Shore includes an introduction to each of the Georgia isles an overview of federal and state coastal land use regulations pointers on buying and building at the shore a hurricane preparation checklist a history of recent hurricanes in Georgia an extensive annotated bibliography and a guide to government agencies and private groups involved in issues of coastal development Greenhouse: Coping with Climate Change WJ Bouma,GI Pearman,MR Manning,1996-01-01 Consideration of climate change deals increasingly with impacts and responses and therefore involves a wide range of technical issues and a diverse community of experts One of the challenges faced is that of ensuring effective communication between these different areas of expertise For example climate change studies require new types of collaboration between carbon cycle modellers and economists and between meteorologists and coastal geomorphologists Furthermore there is a need to distil balanced assessments ranging across many disciplines for the benefit of all policymakers Greenhouse Coping with Climate Change brings together the contributions of many experts to the climate change debate This book is a landmark publication summarising our understanding of climate change issues as they affect Oceania It contains review papers that report on the status of knowledge methodologies and developments and a selection of focused papers that expand on specific issues and present significant new developments of wide general interest and relevance to the region **Living with the Coast of Alaska** Owen K. Mason,William J. Neal,Orrin H. Pilkey,1997 Another shore book that suggests ways to cope not only with disasters at the coast but with the frequent hazards encountered inland Part of the Living with the Shore Series **Climate Change 2014 - Impacts, Adaptation and Vulnerability: Part A: Global and Sectoral Aspects: Volume 1, Global and Sectoral Aspects** Intergovernmental Panel on Climate Change (IPCC),2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy Books for the Teen Age New York Public Library,1994 Dynamics Of Coastal Systems (Second Edition) Job Dronkers,2016-08-19 The book provides a comprehensive and up to date overview of the physical processes which according to the present state of knowledge determine the evolution of coastal systems and their response to human interventions This response depends to a large degree on the self organising properties of coastal dynamics which form a leading theme throughout the book The basic theoretical ideas are explained in text and figures and also in formulas for the more mathematically inclined reader Theories are illustrated with examples from estuaries coastal lagoons beaches and tidal

flat systems from all over the world. The rules and simple models can be used directly without relying on complex computations. Much attention is given to the strengths and weaknesses of the underlying theories and their limits of applicability. The book is fully self-contained. Some knowledge of basic physics and mathematics is recommended. The book is an upgrade of the first edition. Most parts are rewritten and chapters are added to incorporate research results, new insight and experience of the past ten years. This book is intended for everyone interested in coastal systems for professional or educational reasons.

Rising Seas Vivien Gornitz, 2013. The Earth's climate is already warming due to increased concentrations of human-produced greenhouse gases in the atmosphere and the specter of rising sea level is one of global warming's most far-reaching threats. Sea level will keep rising long after greenhouse gas emissions have ceased because of the delay in penetration of surface warming to the ocean depths and because of the slow dissipation of excess atmospheric carbon dioxide. Adopting a long perspective that interprets sea level changes both underway and expected in the near future, Vivien Gornitz completes a highly relevant and necessary study of an unprecedented age in Earth's history. Gornitz consults past climate archives to help better anticipate future developments and prepare for them more effectively. She focuses on several understudied historical events including the Paleocene-Eocene Thermal Anomaly, the Messinian salinity crisis, the rapid filling of the Black Sea which may have inspired the story of Noah's flood, and the Storrega submarine slide, an incident possibly connected to a sea level occurrence roughly 8,000 years old. By examining dramatic variations in past sea level and climate, Gornitz concretizes the potential consequences of rapid human-induced warming. She builds historical precedent for coastal hazards associated with a higher ocean level such as increased damage from storm surge flooding even if storm characteristics remain unchanged. Citing the examples of Rotterdam, London, New York City, and other forward-looking urban centers that are effectively preparing for higher sea level, Gornitz also delineates the difficult economic and political choices of curbing carbon emissions while underscoring through past geological analysis the urgent need to do so.
