Minerals Yearbook ,1989 *The Northeastern Reporter* ,1912 Cases argued and determined in the courts of Illinois Indiana Massachusetts New York Ohio with key number annotations varies *Bird Land* J. M. White,2017-06-26 They had been in space a long time They had examined every planet within their trajectory as ordered There had been six planets in their path that they examined as possible sites for colonization and a nebula off in the distance The nebula was very beautiful kind of purple and dark blue But their orders were not to examine nebulas but to find a class M planet that could be adaptable to humans This was definitely a class M planet all the readings were perfect But with all the experts on board no one could find the source of the intelligence it took to make these amazing gardens that circled the planet Some fairly large birds had been seen But there were no land animals with brains large enough to make these gardens They had to be gardens gardens with uniformed rows of growing crops There were uniformed rows of trees as well and lines of shrubs or hedge which divided the garden areas This planet was placed between three suns just right so as to have one side always warm The temperature was around 70 to 80 degrees and at night near 50 degrees The suns were orbiting in a slightly arched line with this small planet The planet and its two moons orbited around the larger sun The smaller suns being further away gave little light and a small amount of warmth just enough so the other sides of the planet were not in total darkness at any time It had water and oxygen breathable oxygen that meant no suits or helmets This planet was just what they were looking for It was a small green pearl in the vast darkness of space
