Synopsis

The University of South Florida has developed short courses of 2 to 3 days in epidemiology and biostatistics geared to public health workers. A key focus is providing skills which will assist local and State public health units to assess their status and measure progress with respect to achieving their

explicitly stated health objectives for the year 2000. The courses were developed after the identification of the training needs in health departments and other public health settings.

The training objectives were (a) to enhance the biostatistics skills of professionals involved in the analysis of health data; (b) to reinforce basic knowledge of epidemiologic methods and its practical applications in public health settings, including measures of disease frequency and association, epidemic outbreak investigations, and the identification and use of surveillance data; and (c) to demonstrate the application of the risk factor approach to select the interventions needed to reach health objectives for year 2000 and how to evaluate such interventions. A total of 43 students have taken this course series.

Professional staff in health departments cannot always enroll in formal training in epidemiology and biostatistics because of time limitations or a lack of a bachelor's degree. However, the need exists. An alternative to such training could be the short course program described in this paper.

SINCE THE DEMISE of the Applied Statistics Training Institute (ASTI) sponsored by the National Center for Health Statistics (NCHS) (1) more than a decade ago, there has been a dearth of applied statistics training for public health workers in the form of short courses.

Recognizing the need for similar training including epidemiologic methods, NCHS in 1990, funded a 1-year pilot project to develop courses of 2 to 3 days in both biostatistics and epidemiology geared to public health workers at the State and local levels. A key focus is providing skills which will assist public health units to assess their status and measure progress with respect to achieving health objectives for the year 2000 (2).

This cooperative agreement between the Association of Schools of Public Health (ASPH) and NCHS, part of the Centers for Disease Control and Prevention (CDC), is entitled, "Program to Enhance the

Statistical and Epidemiologic Capacity of State and Local Health Professionals" (3). Under this program, the Department of Epidemiology and Biostatistics, College of Public Health, at the University of South Florida (USF), offered three short courses with specific goals, using Florida public health units as a model.

This program was planned to continue only 1 year. However, it served as the pilot for the revival of the ASTI, which is now further developing this short course methodology as an established service. The short courses in epidemiology and biostatistics are oriented to State and local health workers who desire to upgrade their methodological skills in these fundamental areas. An additional emphasis is placed on the use of epidemiologic quantitative concepts and methods to evaluate intervention programs.

The courses were first offered in Tampa, FL. Four neighboring county health units supplied many of the
