

Introduction to Economic Growth

Development of Modern Growth Theory

Questions -

1. Why are some people (countries) rich and some poor?
Need to find determinants of GDP and growth rates to answer this
2. Why do some countries grow faster than others?
3. In long-run, is growth rate exogenous or endogenous?

Endogenous Variable - Determined by decisions (usually based on optimizing behavior; e.g., maximize utility leads to demand; maximize profit leads to supply); (2) something you can change through policy (e.g., tax will change P_D , P_S , and Q)

Supply & Demand - $P_D = a - bQ$ and $P_S = c + dQ$; this leads to $P_D = P_S = a - bQ = c + dQ$
 $\Rightarrow Q = (a - c)/(d + b)$ $\therefore Q$ is given (endogenous)

Growth Rate - can policies affect growth rate (i.e., is growth rate endogenous)?
neoclassical theory says yes, but only in transition, not in long-run; some newer theories say yes; others say no

Technology - technical description; production function; intuitive: instructions for how to produce things

Rice Example - cooking rice requires a pot and heat source (capital), rice and water (resources), and a recipe with directions on how to cook it (technology)

Steady State Equilibrium - also called long-run equilibrium; all variables grow at a constant rates (could be different from each other, but constant over [or independent of] time)

Brief History -

Adam Smith - focused on accumulation of capital

Carl Marx - focused on technological change and unemployment

Ricardo - focused on class structure

Neoclassical Growth Theory - Solow (1956); assumptions:

- Perfect competition in all markets
- Exogenous rate of population growth (in long-run)
- Exogenous rate of technological change (in long-run)
- Endogenous income per capita levels
- Endogenous transitional growth rates

Example - look at income per capita (y); we can change the growth rate (dy/dt) in transition, but not in the long-run (i.e., slope stays the same)

New Growth Theory - Romer (1986) & Lucas (1988); also called **endogenous growth** theory because now long-run growth rate can change; dropped perfect competition assumption and made technical change endogenous

Schumpeterian Approach to Economic Growth - new products have short lifetimes (all companies from the original Dow Industrial list are gone except General Electric); firms enjoy temporary monopoly power (imperfect competition) then are replaced (creative destruction); all used fixed population (not realistic) because introducing any population growth means economic growth unlimited (also not realistic)

Grossman & Helpman (1991), Aghion & Howitt (1992), Segerstrom, et. al. (1990) - focused on product quality

Romer (1990) - focused on product variety

Short Introduction To Modern Growth Theory:

Modern Growth Theory Dipankar Dasgupta, 2010-10-18 This book deals with Growth Theory an important subject taught as a part of economic theory Amongst other topics it introduces the literature on growth and inequality as well as a major critique of growth economics by Charles Jones These issues remained unaddressed in an earlier volume by the author Growth Theory Solow and His Modern Exponents OUP 2005 Developed on the earlier work the present volume focuses on long run growth growth and infrastructure taxation policies for growth human capital formation a unified theoretical framework to help students travel from the world of old growth theory to modern growth theory intuitive as well as rigorous development of optimal control theory using undergraduate mathematical tools analysis of India's long term growth experience For an interactive platform on updates and queries on the book and clarifications by the author please visit the Discussion Forum Modern Growth Theory OUP 2010 at this URL <http://economicsteaching.wordpress.com> 2010 10 28 modern growth theory [A Short Introduction to Modern Growth Theory](#) Ching-Yao Hsieh, Ahmad A. Abushaikh, Anne Richards, 1978 No descriptive material is available for this title **A Search for Synthesis in Economic Theory** Ching-Yao Hsieh, S.L. Magnum, Stephen L. Mangum, 2019-09-25 First published in 1986 Since the late 1960s the seeming inability of traditional monetary and fiscal policies to combat stagflation and address other macroeconomic issues has accelerated the erosion of confidence in the prevailing economic paradigm the neoclassical synthesis Dissensions among the members of the economics profession on both sides of the Atlantic have grown in number By the 1970s a majority of economists had recognized a crisis in economic theory Parallel to this development a crisis has also emerged in the Marxian camp This volume is a discussion from the various schools of thought around three of the salient common grounds follows the theory of a monetary economy the disequilibrium foundations of a general equilibrium theory and a rekindled interest in institutional factors *Economics, Philosophy and Physics* Ching-Yao Hsieh, Meng-Hua Ye, 2016-09-16 This book traces the relationship between ideas and methodological perspectives in economics to the fields of philosophy and the physical sciences It is aimed at students of economics who want to learn about the philosophical underpinnings and scientific foundations of contemporary economic theory The authors show how advances in scientific knowledge have had an impact on philosophy that in turn influenced the development of economic thought *Bridging the Gap Between Growth Theory and Policy in Asia: An Extension of the Solow Growth Model* Singh, Rup, 2014-03-31 Although economic growth is amongst the oldest of debates in Economics there has been little advancement in growth theory since the classic works of Solow As such clear cut answers to the context specific determinants of growth especially for developing countries are rare Bridging the Gap Between Growth Theory and Policy in Asia An Extension of the Solow Growth Model adds to the works of Solow by showing how his original model can be extended and used for policy discussing issues in growth econometrics including the theoretical underpinnings of growth models and some of the important challenges in empirical studies on economic growth This simpler manual will be

highly useful for applied economists policy makers and graduate students

Understanding the Creative Economy and the Future of Employment Jorge Eduardo Fernandez-Pol, Charles Harvie, 2020-04-10 The motivation of this book is simple yet fundamental No complete understanding of the modern economy is possible without a thorough grounding in the field of innovation as an economic activity The book as its title emphasizes aims at helping readers to gain a comprehension of two inextricably linked issues challenging innovation and the future of human work To this end the book integrates a triad of topics innovation as an economic activity modus operandi of an innovation driven economy and the persistent progression toward automation of human jobs The main message conveyed by this book is that a creative economy will converge to an economy governed by smart machines aka robots but will produce benefits if addressed in a rational manner As to the salient features of this book Accessibility Accessible to readers with only cursory knowledge if any in economics Style Adherence to a discursive non mathematical style Brevity Covers material in a succinct easily understandable manner drawing upon real world examples Appendices Each chapter is supplemented with appendices that elaborate upon pertinent real world examples and applications Self contained All the key concepts are defined and exemplified within the book Applicability Uses examples that resonate with a wide audience of readers concerned about the advance of robots Non mathematical diagrams Provides accessible and readily understandable figures graphs Protective stance Contains a rational response to the march of the robots which is useful for workers of all ages

Rethinking Economic Growth Theory From a Biophysical Perspective Blair Fix, 2014-12-09 Neoclassical growth theory is the dominant perspective for explaining economic growth At its core are four implicit assumptions 1 economic output can become decoupled from energy consumption 2 economic distribution is unrelated to growth 3 large institutions are not important for growth and 4 labor force structure is not important for growth Drawing on a wide range of data from the economic history of the United States this book tests the validity of these assumptions and finds no empirical support Instead connections are found between the growth in energy consumption and such disparate phenomena as economic redistribution corporate employment concentration and changing labor force structure The integration of energy into an economic growth model has the potential to offer insight into the future effects of fossil fuel depletion on key macroeconomic indicators which is already manifested in stalled or diminished growth and escalating debt in many national economies This book argues for an alternative biophysical perspective to the study of growth and presents a set of stylized facts that such an approach must successfully explain Aspects of biophysical analysis are combined with differential monetary analysis to arrive at a unique empirical methodology for investigating the elements and dependencies of the economic growth process

Productivity Convergence Edward N. Wolff, 2014 This book critically reviews the most significant works that examine the sources of economic growth

The New Introduction to Geographical Economics Steven Brakman, Harry Garretsen, Charles van Marrewijk, 2009-04-09 This revised and updated introduction to geographical economics explains the who why and where of the location of economic activity *Economic*

Growth in the Regions of Europe Sascha Sardadvar, 2011-01-12 Although interest in spatial growth regressions has been growing in recent years formal theoretical approaches that acknowledge the role of space in economic growth have been sparse In particular in a regional context the assumption of independent non interacting closed economies can lead to misinterpretations This book fills the void by discussing neoclassical growth theory in a spatial context in order to examine growth both theoretically and empirically in a system of N regional economies A formal model is presented that allows for interregional fixed capital relocations which are in turn determined by the economies relative locations in space It is shown how initial endowments with human capital play a decisive role regarding the evolution of output and how both convergence and divergence processes may occur Using a spatial econometric model specification the theoretical model is tested empirically for 255 European regions
