Francis, 1993-01-01 Crop improvement for future farming systems History of crop improvement in sustainable agriculture Choosing germplasm for breeding program success The role of seed companies in crop improvement Crop breeding objectives and methods Breeding for resistance to insects and plant pathogens Crop tolerance to weeds Tree improvement for agroforestry systems Contributions of biotechnology to crop improvement Genotype by environment interaction in crop improvement Statistical design and analysis of intercropping experiments

Achieving sustainable turfgrass management Prof Michael Fidanza, 2023-01-24 Reviews the impact of climate change on the increasing threat of biotic and abiotic stresses to the turfgrass industry as well as the challenge of treating diseased turf in the face of fungicide resistance Considers the development of alternative more sustainable management practices that utilise and or optimise fewer agricultural outputs such as fertilisers pesticides and fuel to power agricultural machinery Provides a selection of case studies that detail the establishment of good turfgrass management and maintenance in a variety of environments golf courses athletic fields sports pitches arid environments

Plant Breeding Reviews, Volume 18 Jules Janick, 2010-04-23 Plant Breeding Reviews is an ongoing series presenting state of the art review articles on research in plant genetics especially the breeding of commercially important crops Articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic This detailed analysis bridges the gap between the specialized researcher and the broader community of plant scientists

Advances in Plant Breeding Strategies: Agronomic, Abiotic and Biotic Stress Traits Jameel M. Al-Khayri, Shri Mohan Jain, Dennis V. Johnson, 2016-03-29 The basic concept of this book is to examine the use of innovative methods augmenting traditional plant breeding towards the development of new crop varieties under different environmental conditions to achieve sustainable food production This book consists of two volumes Volume 1 subtitled Breeding Biotechnology and Molecular Tools and Volume 2 subtitled Agronomic Abiotic and Biotic Stress Traits This is volume 2 which contains 18 chapters highlighting breeding strategies for specific plant traits including improved nutritional and pharmaceutical properties as well as enhanced tolerance to insects diseases drought salinity and temperature extremes expected under predicted global climate change

Genetic Improvement of Bioenergy Crops Wilfred Vermerris, 2008-08-02 Ethanol as an alternative fuel is receiving a lot of attention because it addresses concerns related to dwindling oil supplies energy independence and climate change The majority of the ethanol in the US is

produced from corn starch With the US Department of Energy's target that 30% of the fuel in the US is produced from renewable resources by 2030 the anticipated demand for corn starch will quickly exceed the current production of corn This plus the concern that less grain will become available for food and feed purposes necessitates the use of other feedstocks for the production of ethanol For the very same reasons there is increasing research activity and growing interest in many other biomass crops Genetic Improvement of Bio Energy Crops focuses on the production of ethanol from lignocellulosic biomass which includes corn stover biomass from dedicated annual and perennial energy crops and trees as well as a number of important biomass crops The biomass is typically pretreated through thermochemical processing to make it more amenable to hydrolysis with cellulolytic enzymes The enzymatic hydrolysis yields monomeric sugars that can be fermented to ethanol by micro organisms While much emphasis has been placed on the optimization of thermo chemical pretreatment processes production of more efficient hydrolytic enzymes and the development of robust microbial strains relatively little effort has been dedicated to the improvement of the biomass itself

The Tobacco Plant Genome Nikolai V. Ivanov, Nicolas Sierro, Manuel C. Peitsch, 2020-03-16 This book describes the history of tobacco genomics from its discovery by Europeans to next generation omics approaches in plant science The authors primarily focus on the allotetraploid common tobacco plant *N. tabacum* however separate chapters are dedicated to closely related *Nicotiana* species such as *N. benthamiana* and *N. attenuata* for which substantial progress in omics data analysis has been already achieved While genetic maps transcriptomes and physical maps of BAC libraries have significantly enhanced our understanding of the tobacco plant the genome of tobacco and related *Nicotiana* species has opened a new era in modern tobacco research This book addresses current and future industrial and research applications as well as central challenges in tobacco science including diseases low variability of cultivars the genome's large size polyploidy and gene duplication

C. Gomez-Campo, 1999-07-07 Brassica crop species and their allies Raphanus Sinapis Eruca etc are important sources of edible roots stems leaves buds and inflorescences as well as of edible or industrial oils condiments and forage Many well known names of plants or plant products such as kale cabbage broccoli cauliflower Brussels sprouts kohlrabi Chinese cabbage turnip rape rutabaga swede colza or rapeseed canola mustard rocket etc are directly associated to this botanical group The scientific interest for this botanical group has run parallel to its economical importance and research achievements in our days would have certainly appeared unimaginable only two decades ago As the end of the millennium approaches entirely new fields transformation somatic fusion etc have been added to the classical ones Thus nobody can doubt the opportuneness of this book which combines and presents both the basic and applied biological aspects of the Brassica species **Adaptation in Plant Breeding** P.M.A Tigerstedt, 2013-03-09 Plant adaptation is a fundamental process in plant breeding It was the first criterion in the initial domestication of plants thousands of years ago Adaptedness is generally a quantitative complex feature of the plant involving many traits many of which are quantitative Adaptation to stresses like cold drought or diseases are among the most central problems in a world grappling with global food security Modern plant breeding based on mendelian genetics has made plant improvement more effective and more precise and selective Molecular genetics and genetic engineering has considerably increased this selectivity down to single genes affecting single traits The time has come when plant breeding efficiency may cause loss of genetic resources and adaptation In these proceedings an effort is made to merge modern plant breeding efficiency with ecological aspects of plant breeding reflected in adaptation It is hoped that this merger results in more sustainable use of genetic resources and physical environments The book is based on 10 keynotes addressing a wide spectrum of themes related to adaptation In addition each subject is further elaborated in up to three case studies on particular plant species or groups of plants The keynotes do in fact overlap to some degree and there are articles in this volume that seemingly contradict each other a common aspect in advanced fields of research The keen reader may conclude that in a world where climates and environments are under continuous change and where human society is more and more polarized into a developed and a developing part adaptation of our cultivated plants has different constraints on yields depending on ecology and indeed economy **Harmonisation of Regulatory Oversight in Biotechnology Safety Assessment of Transgenic Organisms in the Environment, Volume**

5 OECD Consensus Documents OECD,2016-04-05 This series represents a compilation of the biosafety consensus documents developed by the OECD Working Group on Harmonisation of Regulatory Oversight in Biotechnology over the periods 2011 12 Volume 5 and 2013 15 Volume 6
