Rapid Guide to Trade Names and Synonyms of Environmentally Regulated Chemicals Richard P. Pohanish, 1998

Rapid Guide to Hazardous Chemicals in the Environment Richard P. Pohanish, 1997 *Rapid Guide to Hazardous Chemicals in the Environment* covers in alphabetical order by the USEPA's regulatory name approximately 1500 chemicals and chemical categories that appear in federal and state regulations. The chemicals were taken from 26 different listings including Clean Air Act, Clean Water Act, Resource Conservation and Recovery Act, Safe Drinking Water Act, Comprehensive Environmental Response Compensation and Liability Act, Emergency Planning and Community Right to Know Act, United States Department of Transportation's list of Marine Pollutants, and California's Proposition 65 list of Hazardous Chemicals known to cause cancer and reproductive toxicity. Each chemical record includes EPA name, Chemical Abstract Service (CAS) number, regulatory documents, citations to the regulations, and values related to the impact of the regulations. Helpful notations such as administrative stays, EPA Category Codes, and Federal Register volume, page numbers, and dates for deletion of chemicals from a specific regulatory list are also provided. This book also contains EPA contact numbers, hotlines, and bulletin boards, and a general summary of federal environmental regulations.

Walford's Guide to Reference Material: Science and technology Albert John Walford, Library Association, 1999. A revised and updated guide to reference material. It contains selective and evaluative entries to guide the enquirer to the best source of reference in each subject area, be it journal article, CD-ROM, on-line database, bibliography, encyclopaedia, monograph, or directory. It features full critical annotations and reviewers' comments and comprehensive author, title, and subject indexes. The contents include mathematics, astronomy, and surveying, physics, chemistry, earth sciences, palaeontology, anthropology, biology, natural history, botany, zoology, patents, and interventions, medicine, engineering, transport, vehicles, agriculture, and livestock, household management, communication, chemical industry, manufactures, industries, trades, and crafts, and the building industry.

The New Walford Guide to Reference Resources Ray Lester, 2005. The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, The New Walford naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services, and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might, The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result, the resource evaluations in each subject area are prefaced by an

introductory overview of the structure of the relevant literature This ensures that The New Walford is clear easy to use and intuitive Publisher Books In Print 2004-2005 Ed Bowker Staff,Staff Bowker, Ed,2004 Information Resources in Toxicology, Volume 1: Background, Resources, and Tools ,2020-05-16 This new fifth edition of Information Resources in Toxicology offers a consolidated entry portal for the study research and practice of toxicology Both volumes represents a unique wide ranging curated international annotated bibliography and directory of major resources in toxicology and allied fields such as environmental and occupational health chemical safety and risk assessment The editors and authors are among the leaders of the profession sharing their cumulative wisdom in toxicology s subdisciplines This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools Due to the increasing size of the hardcopy publication the current edition has been divided into two volumes to make it easier to handle and consult Volume 1 Background Resources and Tools arranged in 5 parts begins with chapters on the science of toxicology its history and informatics framework in Part 1 Part 2 continues with chapters organized by more specific subject such as cancer clinical toxicology genetic toxicology etc The categorization of chapters by resource format for example journals and newsletters technical reports organizations constitutes Part 3 Part 4 further considers toxicology s presence via the Internet databases and software tools Among the miscellaneous topics in the concluding Part 5 are laws and regulations professional education grants and funding and patents Volume 2 The Global Arena offers contributed chapters focusing on the toxicology contributions of over 40 countries followed by a glossary of toxicological terms and an appendix of popular quotations related to the field The book offered in both print and electronic formats is carefully structured indexed and cross referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed Among the many timely topics receiving increased emphasis are disaster preparedness nanotechnology omics risk assessment societal implications such as ethics and the precautionary principle climate change and children s environmental health Introductory chapters provide a backdrop to the science of toxicology its history the origin and status of toxicoinformatics and starting points for identifying resources Offers an extensive array of chapters organized by subject each highlighting resources such as journals databases organizations and review articles Includes chapters with an emphasis on format such as government reports general interest publications blogs and audiovisuals Explores recent internet trends web based databases and software tools in a section on the online environment Concludes with a miscellany of special topics such as laws and regulations chemical hazard communication resources careers and professional education K 12 resources funding poison control centers and patents Paired with Volume Two which focuses on global resources this set offers the most comprehensive compendium of print digital and organizational resources in the toxicological sciences with over 120 chapters contributions by experts and leaders in the field **Essential Resources for Industrial Hygiene** Michael K.
