extreme levels Four in ten American workers say that their jobs are very or extremely stressful Job stress is recognized as an epidemic in the workplace and its economic and health care costs are staggering by some estimates over 1 billion per year in lost productivity absenteeism and worker turnover and at least that much in treating its health effects ranging from anxiety and psychological depression to cardiovascular disease and hypertension Why are so many American workers so stressed out by their jobs Many psychologists say stress is the result of a mismatch between the characteristics of a job and the personality of the worker Many management consultants propose reducing stress by redesigning jobs and developing better individual strategies for coping with their stress But these explanations are not the whole story They don't explain why some jobs and some occupations are more stressful than other jobs and occupations regardless of the personalities and coping strategies of individual workers Why do auto assembly line workers and air traffic controllers report more job stress than university professors self-employed business owners or corporate managers yes managers The authors of *Work and Mental Health in Social Context* take a different approach to understanding the causes of job stress Job stress is systematically created by the characteristics of the jobs themselves by the workers occupation the organizations in which they work their placements in different labor markets and by broader social economic and institutional structures processes and events And disparities in job stress are systematically determined in much the same way as are other disparities in health income and mobility opportunities In taking this approach the authors draw on the observations and insights from a diverse field of sociological and economic theories and research These go back to the nineteenth century writings of Marx Weber and Durkheim on the relationship between work and well being They also include the more contemporary work in organizational sociology structural labor market research from sociology and economics research on unemployment and economic cycles and research on institutional environments This has allowed the authors to develop a unified framework that extends sociological models of income inequality and status attainment or allocation to the explanation of non economic health related outcomes of work Using a multi level structural model this timely and comprehensive volume explores what is stressful about work and why specifically address these and questions and more What characteristics of jobs are the most stressful what characteristics reduce stress Why do work organizations structure some jobs to be highly stressful and some jobs to be much less stressful Is work in a bureaucracy really more stressful How is occupational status occupational power and authority related to the stressfulness of work How does the segmentation of labor markets by occupation industry race gender and citizenship maintain disparities in job stress Why is unemployment stressful to workers who don't lose their jobs How do public policies on employment status collective bargaining overtime affect job stress Is work in the current Post neo Fordist era of work more or less stressful than work during the Fordist era In addition to providing a new way to understand the sociological causes of job stress and mental health the model that the authors provide has broad applications to further study of this important area of research This volume will be of key interest to sociologists and other researchers studying

social stratification public health political economy institutional and organizational theory Treadmill of Production Kenneth A. Gould, David N. Pellow, Allan Schnaiberg, 2015-11-17 Schnaiberg's concept of the treadmill of production is arguably the most visible and enduring theory to emerge in three decades of environmental sociology. Elaborated and tested, it has been found to be an accurate predictor of political economic changes in the global economy. In the global South, it has figures prominently in the work of structural environmental analysts and has been used by many political economic movements. Building new extensions and applications of the treadmill theory, this new book shows how and why northern analysts and governments have failed to protect our environment and secure our future. Using an empirically based political economic perspective, the authors outline the causes of environmental degradation, the limits of environmental protection policies, and the failures of institutional decision makers to protect human well-being. Relational Inequalities Donald Tomaskovic-Devey, Dustin Robert Avent-Holt, 2019 Organizations are the dominant social invention for generating resources and distributing them. *Relational Inequalities* develops a general sociological and organizational analysis of inequality, exploring the processes that generate inequalities in access to respect, resources, and rewards. Framing their analysis through a relational account of social and economic life, Donald Tomaskovic-Devey and Dustin Avent-Holt explain how resources are generated and distributed both within and between organizations. They show that inequalities are produced through generic processes that occur in all social relationships: categorization and their resulting status hierarchies, organizational resource pooling, exploitation, social closure, and claims making. Drawing on a wide range of case studies, Tomaskovic-Devey and Avent-Holt focus on the workplace as the primary organization for generating inequality and provide a series of global goals to advance both a comparative organizational research model and to challenge troubling inequalities. Work Steven Vallas, 2013-12-23 This book provides a critical overview of the myriad literatures on work, viewed not only as a product of the marketplace but also as a social and political construct. Drawing on theoretical and empirical contributions from sociology, history, economics, and organizational studies, the book brings together perspectives that too often remain balkanized, using each to explore the nature of work today. Outlining the fundamental principles that unite social science thinking about work, Vallas offers an original discussion of the major theoretical perspectives that inform workplace analysis, including Marxist, interactionist, feminist, and institutionalist schools of thought. Chapters are devoted to the labor process, to workplace flexibility, to gender and racial inequalities at work, and to the link between globalization and the structure of work and authority today. Major topics include the relation between work and identity, the relation between workplace culture and managerial control, and the performance of emotional labor within service occupations. This concise book will be invaluable to students at all levels as it explores a range of insights to make sense of pressing issues that drive the social scientific study of work today. **Citizenship** Peter Kivisto, Thomas Faist, 2015-08-12 A significant addition to the growing body of literature on citizenship, this wide-ranging overview focuses on the importance and changing nature of citizenship. It introduces the varied

discourses and theories that have arisen in recent years and looks toward future scholarship in the field Offers an analytical assessment of the various thematic discourses and provides guidance in pulling together those discrete themes into a larger more comprehensive framework Identifies the four broadly conceived themes that shape the many discourses on contemporary citizenship inclusion erosion withdrawal and expansion Includes a thorough introduction to the subject
