Ships For The Seven Seas Philadelphia Shipbuilding In The Age Of Industrial Capitalism:

Ships for the Seven Seas Thomas Heinrich, 2020-03-24 Thomas R Heinrich explores American shipbuilding from the workshop level to subcontracting networks spanning the Delaware Valley Winner of the North American Society for Oceanic History's John Lyman Book Award Originally published in 1996 Sustained by a skilled work force and the Pennsylvania iron and steel industry Philadelphia shipbuilders negotiated the transition from wooden to iron hull construction earlier and far more easily than most other builders Between the Civil War and World War I Philadelphia emerged as the vital center of American shipbuilding constructing a wide variety of vessel types such as passenger liners freighters battleships and cruisers In *Ships for the Seven Seas* Thomas R Heinrich explores this complex industry from the workshop level to subcontracting networks spanning the Delaware Valley He describes entrepreneurial strategies and industrial change that facilitated the rise of major shipbuilding firms how naval architecture marine engineering and craft skills evolved as iron and steel overtook wood as the basic construction material and how changes in domestic and international trade and the rise of the American steel navy helped generate vessel contracts for local builders Heinrich also examines the formation of the military industrial complex in the context of naval contracting Contributing to current debates in business history *Ships for the Seven Seas* explains how proprietary ownership and batch production strategies enabled late nineteenth century builders to supply volatile markets with custom built steamships But large scale naval construction in the 1920s eroded production flexibility Heinrich argues and since then ill conceived merchant marine policies and naval contracting procedures have brought about a structural crisis in American shipbuilding and the demise of the venerable Philadelphia shipyards *Ships for the Seven Seas* Thomas R. Heinrich, 1997-03-01 Sustained by a skilled work force and the PA iron and steel I how naval arch marine eng g and craft skills evolved as I and how changes in domestic and internat trade and the rise of the Amer steel navy helped generate vessel contracts for local builders But large scale naval construction in the 1920s brought about the demise of the Phila shipyards Ships for the Seven Seas Thomas R. Heinrich, 1993 **Sweatshops at Sea** Leon Fink, 2011-03-14 As the main artery of international commerce merchant shipping was the world's first globalized industry often serving as a vanguard for issues touching on labor recruiting the employment relationship and regulatory enforcement that crossed national borders In *Sweatshops at Sea* historian Leon Fink examines the evolution of laws and labor relations governing ordinary seamen over the past two centuries The merchant marine offers an ideal setting for examining the changing regulatory regimes applied to workers by the United States Great Britain and ultimately an organized world community Fink explores both how political and economic ends are reflected in maritime labor regulations and how agents of reform including governments trade unions and global standard setting authorities grappled with the problems of applying land based national principles and regulations of labor discipline and management to the sea going labor force With the rise of powerful nation states in a global marketplace in the nineteenth century recruitment and regulation of a mercantile labor

force emerged as a high priority and as a vexing problem for Western powers The history of exploitation reform and the evolving international governance of sea labor offers a compelling precedent in an age of more universal globalization of production and services

Civil War Ironclads William H. Roberts, 2007-08-30 Honorable Mention Science and Technology category John Lyman Book Awards North American Society for Oceanic History Civil War Ironclads supplies the first comprehensive study of one of the most ambitious programs in the history of naval shipbuilding In constructing its new fleet of ironclads William H Roberts explains the U S Navy faced the enormous engineering challenges of a largely experimental technology In addition it had to manage a ship acquisition program of unprecedented size and complexity To meet these challenges the Navy established a project office that was virtually independent of the existing administrative system The office spearheaded efforts to broaden the naval industrial base and develop a marine fleet of ironclads by granting shipbuilding contracts to inland firms Under the intense pressure of a wartime economy it learned to support its high technology vessels while incorporating the lessons of combat But neither the broadened industrial base nor the advanced management system survived the return of peace Cost overruns delays and technical blunders discredited the embryonic project office while capital starvation and never ending design changes crippled or ruined almost every major builder of ironclads When Navy contracts evaporated so did the shipyards Contrary to widespread belief Roberts concludes the ironclad program set Navy shipbuilding back a generation

Differences Between Military and Commercial Shipbuilding, 2005 This monograph is one of a set of three addressing related issues in UK shipbuilding Funded by the Defence Procurement Agency DPA the three studies have the common goal of contributing to better understanding the warship building industry within the United Kingdom and to improving management processes therein *The Way of the Ship* Alex Roland, W. Jeffrey Bolster, Alexander Keyssar, 2008 The Way of the Ship offers a global perspective and considers both oceanic shipping and domestic shipping along America's coasts and inland waterways with explanations of the forces that influenced the way of the ship The result is an eye opening authoritative look at American maritime history and the ways it helped shape the nation's history
