The Protection of the Underwater Cultural Heritage Anastasia Stratē, 1995 The marine environment is almost ideal for the preservation of artefacts and until relatively recently it also provided complete protection from destruction by man However the aqualung has made most shallow underwater sites accessible leading to widespread plundering Current deep sea bed technology now threatens deep water sites There is a need for immediate international action to preserve the man made environment alongside the natural one The enunciation of legal rules to protect the underwater cultural heritage is a complex issue involving a matrix of interests and laws both international and national

Submerged Prehistory in the Americas John M. O'Shea, 2023-05-08 This book presents an overview of the exciting new developments in underwater research in North America ranging from new approaches for discovering submerged sites to an assessment of how these findings challenge the understanding of the North American past Archaeological sites preserved on the world's continental shelves are relevant to a wide range of major research questions and their importance increases with the heightened awareness of climate change and rising modern sea levels Once thought lost forever these sites survive

underwater preserved from the ravages of modern farming and development To investigate the submerged landscapes archaeologists use many of the same technologies developed for discovery of shipwrecks but couple them with anthropological and environmental models to identify and study the way of life of people residing in these ancient lands In this book leading figures associated with submerged site exploration share an emphasis on the conduct and results of underwater research It will be a fascinating read for advanced students of Archaeology History and Environmental Studies This volume was originally published as a special issue of The Journal of Island and Coastal Archaeology Fishing and Shipwreck Heritage Sean A. Kingsley, 2015-11-19 For 250 years encrusted wonders have been turning up in fishermen s nets everything imaginable from prehistoric animal bones to priceless Roman statues Fishing trawlers annually sweep an area equivalent in size to half the world s continental shelves Everything in the wake of these bulldozers of the deep is battered A devastating trail of smashed shipwrecks runs from the North Sea to Malaysia The profound threat of the global fishing industry remains a black hole in marine archaeology poorly understood and unmanaged Fishing and Shipwreck Heritage is the first global analysis of the threat of bottom fishing to underwater cultural heritage examining the diversity scale and implications on endangered finds and sites Throughout the key questions of whether it is too late to save the planet s three million wrecks and how sustainable management is achievable are debated **Dictionary Catalog of the Department Library** United States.
