Shock Detonation Waves:

Shock and Detonation Waves John G. Kirkwood, 1968 **Shock Waves Science and Technology Library, Vol. 6** F. Zhang, 2012-03-28 This book as a volume of the Shock Wave Science and Technology Reference Library is primarily concerned with the fundamental theory of detonation physics in gaseous and condensed phase reactive media The detonation process involves complex chemical reaction and fluid dynamics accompanied by intricate effects of heat light electricity and magnetism a contemporary research field that has found wide applications in propulsion and power hazard prevention as well as military engineering The seven extensive chapters contained in this volume are Chemical Equilibrium Detonation S Bastea and LE Fried Steady One Dimensional Detonations A Higgins Detonation Instability HD Ng and F Zhang Dynamic Parameters of Detonation AA Vasiliev Multi Scaled Cellular Detonation D Desbordes and HN Presles Condensed Matter Detonation Theory and Practice C Tarver Theory of Detonation Shock Dynamics JB Bdzil and DS Stewart The chapters are thematically interrelated in a systematic descriptive approach though each chapter is self contained and can be read independently from the others It offers a timely reference of theoretical detonation physics for graduate students as well as professional scientists and engineers *Interaction of Oblique Shock and Detonation Waves* Y. Sheng, Jean Pascal; Sislian, 1982 **Shock Waves** Klaus Hannemann, Friedrich Seiler, 2009-04-01 The 26th International Symposium on Shock Waves in G ttingen Germany was jointly organised by the German Aerospace Centre DLR and the French German Research Institute of Saint Louis ISL The year 2007 marked the 50th anniversary of the Symposium which first took place in 1957 in Boston and has since become an internationally acclaimed series of meetings for the wider Shock Wave Community The ISSW26 focused on the following areas Shock Propagation and Reflection Detonation and Combustion Hypersonic Flow Shock Boundary Layer Interaction Numerical Methods Medical Biological and Industrial Applications Richtmyer Meshkov Instability Blast Waves Chemically Reacting Flows Diagnostics Facilities Flow Visualisation Ignition Impact and Compaction Multiphase Flow Nozzles Flows Plasmas and Propulsion The two Volumes contain the papers presented at the symposium and serve as a reference for the participants of the ISSW 26 and individuals interested in these fields Excitation of Detonation by Shock Waves (Selected Portions). A. S. Derzhavets, FOREIGN TECHNOLOGY DIV WRIGHT-PATTERSON AFB OH., 1972 Current theoretical views on the mechanism of excitation of detonation are first discussed Excitation by shock waves is then treated at length The effects of various parameters such as shock wave velocity temperature pressure duration of action distance and dimensions of passive charge etc on initiation of detonation are considered and appropriate formulas and relations are given The impulse initiation of detonation of explosives is characterized by 3 phases shock wave initiation of chemical reactions growth of this reaction in the solid explosive and appearance of the detonation wave *History of Shock Waves, Explosions and Impact* Peter O. K. Krehl, 2008-09-24 This unique and encyclopedic reference work describes the evolution of the physics of modern shock wave and detonation from the earlier and classical percussion The history of this

complex process is first reviewed in a general survey. Subsequently the subject is treated in more detail and the book is richly illustrated in the form of a picture gallery. This book is ideal for everyone professionally interested in shock wave phenomena.

Unsteady Interaction of Shock and Detonation Waves in Gases Viktor Pavlovich Korobeinikov, 1989 *Dynamics of Shock Waves, Explosions, and Detonations* J. Raymond Bowen, 1984 **Shock Waves** Zonglin Jiang, 2010-05-30

The 24th International Symposium on Shock Waves (ISSW24) was held at the Beijing Friendship Hotel during July 11-16, 2004 in Beijing. It was a great pleasure for the Local Organizing Committee to organize the ISSW in China for the first time because forty-seven years have passed since the First Shock Tube Symposium was held in 1957 at Albuquerque. The ISSW24 had to be postponed for one year because of the SARS outbreak in Beijing shortly before the Symposium was scheduled to be held in 2003, but it has achieved success due to the continuous support and kind understanding from all the delegates. It is very heartwarming to have had such an experience and I am very happy to have served as chairman for the Symposium. I would like to thank all for the contributions and help that they have given us over the past three years without which we would not have had the Symposium. A total of 460 abstracts were submitted to the ISSW24. Each of the abstracts was evaluated by three members of the Scientific Review Committee and the decision on acceptance was made based on the reviewers' reports. 195 oral papers, including 9 plenary lectures, were accepted to be presented in three parallel sessions and 135 poster papers in three dedicated poster sessions. Topics discussed in these papers cover all aspects of shock wave research.

Shock Waves in Condensed Matter Y. M. Gupta, 2012-12-06

The Fourth American Physical Society Topical Conference on Shock Waves in Condensed Matter was held in Spokane, Washington, July 22-25, 1985. Two hundred and fifty scientists and engineers representing thirteen countries registered at the conference. The countries represented included the United States of America, Australia, Canada, The People's Republic of China, France, India, Israel, Japan, Republic of China, Taiwan, United Kingdom, U.S.S.R., Switzerland, and West Germany. One hundred and sixty-two technical papers covering recent developments in shock wave and high pressure physics were presented. All of the abstracts have been published in the September 1985 issue of the Bulletin of the American Physical Society. The topical conferences held every two years since 1979 have become the principal forum for shock wave studies in condensed materials. Both formal and informal technical discussions regarding recent developments conveyed a sense of excitement. Consistent with the past conferences, the purpose of this conference was to bring together scientists and engineers studying the response of condensed matter to dynamic high pressures and temperatures. Papers covering experimental, theoretical, and numerical studies of condensed matter properties were presented. A noteworthy feature of this conference was the participation by several leading scientists engaged in static high pressure research. Donald Curran served as the Master of Ceremonies at the conference banquet, which was attended by two hundred and seventy-five conference participants and guests, including Dr. Samuel Smith, the new President of Washington State University. Dr.
