Shocks In Astrophysics:

Shocks in Astrophysics T.J. Millar,A.C. Raga,2012-12-06 This volume contains the proceedings of an international conference on Shocks in Astrophysics held at UMIST Manchester England from January 9 12 1995 The study of interstellar and circumstellar gas dynamics has a long and distinguished history in Manchester and has been almost entirely concentrated in the school founded by Franz Kahn in the Astronomy Department University of Manchester In January 1993 one of us AR was appointed to the faculty of the Astrophysics Group in the Department of Mathematics at UMIST and astrophysical gas dynamics became a major interest of the Group The subject of this conference was chosen partly for the topicality of the subject matter and partly to help synthesise this expertise with the expertise in interstellar chemistry already present in the Group The first fruits of this synthesis are contained in this volume As it happened this conference celebrated not so much the beginnings of a long and fruitful collaboration but rather gave many of Alex's friends the chance to say a fond farewell as he departed UMIST at the end of January 1995 to take up a chair at UNAM Mexico City The core of this volume consists of twelve review articles marked R in the list of contents incorporating observational and theoretical studies of shock waves in a variety of situations from Herbig Haro objects to Supernova Remnants to Active Galactic Nuclei We have also included the contributed C and poster P papers

Physics of Collisionless Shocks André Balogh,Rudolf A. Treumann,2013-01-04 The present book provides a contemporary systematic treatment of shock waves in high temperature collisionless plasmas as are encountered in near Earth space and in Astrophysics It consists of two parts Part I develops the complete theory of shocks in dilute hot plasmas under the assumption of absence of collisions among the charged particles when the interaction is mediated solely by the self consistent electromagnetic fields Such shocks are naturally magnetised implying that the magnetic field plays an important role in their evolution and dynamics This part treats subcritical shocks which dissipate flow energy by generating anomalous resistance or viscosity The main emphasis is however on super critical shocks where the anomalous dissipation is insufficient to retard the upstream flow These shocks depending on the direction of the upstream magnetic field are distinguished as quasi perpendicular and quasi parallel shocks which exhibit different behaviours reflecting particles back upstream and generating high electromagnetic wave intensities Particle acceleration and turbulence at such shocks become possible and important Part II treats planetary bow shocks and the famous Heliospheric Termination shock as examples of two applications of the theory developed in part I

The Physics of Astrophysics Frank H. Shu,1991 This two volume text is for new graduates on astronomy courses who need to get to grips with the physics involved in the subject Four problem sets averaging three problems per set accompany each volume The problems expand on the material covered in the texts and represent the level of calculational skill needed to write scientific papers in contemporary astrophysics

Collisionless Shocks in Space Plasmas David Burgess (Astrophysicist),M. Scholer,2015

High Energy Density Laboratory Astrophysics George A. Kyrala,2005-12-14 During the past several years research teams

around the world have developed astrophysics relevant utilizing high energy density facilities such as intense lasers and z pinches Research is underway in many areas such as compressible hydrodynamic mixing strong shock phenomena radiation flow radiative shocks and jets complex opacities equations of state and relativistic plasmas Beyond this current research and the papers it is producing plans are being made for the application to astrophysics relevant research of the 2 MJ National Ignition Facility NIF laser at Lawrence Livermore National Laboratory the 600 kJ Ligne d'Intégration Laser LIL and the 2 MJ Laser Mégajoule LMJ in Bordeaux France petawatt range lasers now under construction around the world and current and future Z pinches The goal of this conference and these proceedings is to continue focusing attention on this emerging research area The conference brought together different scientists interested in this emerging new field with topics covering Hydrodynamic instabilities in astrophysics Supernovae and supernova remnant evolution Astrophysical shocks blast waves and jets Stellar opacities Radiation and thermal transport Dense plasma atomic physics and EOS X ray photoionized plasmas Ultrastrong magnetic field generation

Collisionless Plasmas in Astrophysics Gérard Belmont, Roland Grappin, Fabrice Mottez, Filippo Pantellini, Guy Pelletier, 2013-09-10 Collisionless Plasmas in Astrophysics examines the unique properties of media without collisions in plasma physics Experts in this field the authors present the first book to concentrate on collisionless conditions in plasmas whether close or not to thermal equilibrium Filling a void in scientific literature Collisionless Plasmas in Astrophysics explains the possibilities of modeling such plasmas using a fluid or a kinetic framework It also addresses common misconceptions that even professionals may possess on phenomena such as collisionless Landau damping Abundant illustrations are given in both space physics and astrophysics

An Introduction to Astrophysical Hydrodynamics Steven N. Shore, 2012-12-02 This book is an introduction to astrophysical hydrodynamics for both astronomy and physics students It provides a comprehensive and unified view of the general problems associated with fluids in a cosmic context with a discussion of fluid dynamics and plasma physics It is the only book on hydrodynamics that addresses the astrophysical context Researchers and students will find this work to be an exceptional reference Contents include chapters on irrotational and rotational flows turbulence magnetohydrodynamics and instabilities

Fundamentals of Astrophysical Fluid Dynamics Shoji Kato, Jun Fukue, 2020-06-19 This book offers an overview of the fundamental dynamical processes which are necessary to understand astrophysical phenomena from the viewpoint of hydrodynamics magnetohydrodynamics and radiation hydrodynamics The book consists of three parts The first discusses the fundamentals of hydrodynamics necessary to understand the dynamics of astrophysical objects such as stars interstellar gases and accretion disks The second part reviews the interactions between gases and magnetic fields on fluid motions the magnetohydrodynamics highlighting the important role of magnetic fields in dynamical phenomena under astrophysical environments The third part focuses on radiation hydrodynamics introducing the hydrodynamic phenomena characterized by the coupling of radiation and gas motions and further on relativistic radiation hydrodynamics Intended as a pedagogical

introduction for advanced undergraduate and graduate students it also provides comprehensive coverage of the fundamentals of astrophysical fluid dynamics making it an effective resource not only for graduate courses but also for beginners wanting to learn about hydrodynamics magnetohydrodynamics and radiation hydrodynamics in astrophysics independently

Physics and Astrophysics of Neutrinos Masataka Fukugita, Atsuto Suzuki, 2013-12-14

Observations of neutrinos being emitted by the supernova SN1987A star neutrinos and atmospheric neutrinos by means of underground detectors have provided new insights into astronomy These observations have brought to light new unresolved phenomena such as the solar neutrino problem spurring investigative studies among particle physicists and astrophysicists Today intense interaction and continual cooperation between specialists in the field of particle physics and astronomy cosmology are a pre requisite for conducting further studies This book provides detailed elaborations on selected topics One of the most important features of this book is its enumeration of a number of basic properties of neutrinos and their relationship to Grand Unified Theories It does not cover all aspects of neutrino theory but rather focuses on the origin of the neutrino s mass and the generation mixing of neutrinos The neutrino experiments described were carried out mainly by Japanese researchers All the kamiokande results detector performances and complete references are included Experiments regarding the neutrino s mass are represented in the direct mass measurement the double beta decay experiment and the neutrino oscillation experiment The detection of low energy astrophysical neutrinos is discussed Particle acceleration mechanisms in astrophysics and the detection of high energy gamma rays and neutrinos are also represented
