Shoot The Project Manager:

Shoot the Project Manager Robert Brents, 2002-04-01 Forget about project management The paradigm has shifted for the better Shoot the Project Manager illuminates a model for project leadership

The Data-Driven Project Manager Mario Vanhoucke, 2018-03-27 Discover solutions to common obstacles faced by project managers Written as a business novel the book is highly interactive allowing readers to participate and consider options at each stage of a project The book is based on years of experience both through the author's research projects as well as his teaching lectures at business schools The book tells the story of Emily Reed and her colleagues who are in charge of the management of a new tennis stadium project The CEO of the company Jacob Mitchell is planning to install a new data driven project management methodology as a decision support tool for all upcoming projects He challenges Emily and her team to start a journey in exploring project data to fight against unexpected project obstacles Data driven project management is known in the academic literature as dynamic scheduling or integrated project management and control It is a project management methodology to plan monitor and control projects in progress in order to deliver them on time and within budget to the client Its main focus is on the integration of three crucial aspects as follows

Baseline Scheduling Plan the project activities to create a project timetable with time and budget restrictions Determine start and finish times of each project activity within the activity network and resource constraints Know the expected timing of the work to be done as well as an expected impact on the project's time and budget objectives

Schedule Risk Analysis Analyze the risk of the baseline schedule and its impact on the project's time and budget Use Monte Carlo simulations to assess the risk of the baseline schedule and to forecast the impact of time and budget deviations on the project objectives

Project Control Measure and analyze the project's performance data and take actions to bring the project on track Monitor deviations from the expected project progress and control performance in order to facilitate the decision making process in case corrective actions are needed to bring projects back on track Both traditional Earned Value Management EVM and the novel Earned Schedule ES methods are used

What You'll Learn Implement a data driven project management methodology also known as dynamic scheduling which allows project managers to plan monitor and control projects while delivering them on time and within budget Study different project management tools and techniques such as PERT CPM schedule risk analysis SRA resource buffering and earned value management EVM Understand the three aspects of dynamic scheduling baseline scheduling schedule risk analysis and project control
