Arstila, 2013-10-22 Pathobiology of Cell Membranes Volume I represents the first in a multivolume treatise designed for pathologists and cell biologists interested in the role of membrane alterations in disease processes The treatise will emphasize concepts related to membrane alterations in cell injury as well as methods for elucidating such changes The book begins with a discussion of the general conceptual aspects of cell injury and some details about the role of membrane alterations in the pathogenesis of both lethal and sublethal cellular reactions. This is followed by separate chapters on applications of circular dichroism to the study of membranes a cell injury mechanism involving membrane components at the molecular level and fundamental aspects of cell volume regulation and the modification of this regulation by primary or secondary damage of the cell membrane Subsequent chapters deal with comparative roles of lysosomal and other membrane damage in cell injury the role of membrane movements and various types of lysosome formation toxic effects on mitochondrial membranes and the concept of a biological membrane in health and disease at the Mammalian protein metabolism Hamish N. Munro, 2013-09-24 Mammalian Protein Metabolism Volume III provides an overview of the state of knowledge on mammalian protein metabolism It enlarges and adds depth to the picture of protein metabolism provided by Volumes I and II The present volume covers two aspects of protein metabolism not specifically considered in the earlier parts of the treatise First there is a section of three chapters dealing with changes in protein metabolism during evolution and during growth and development At its most fundamental level this part deals in reality with an aspect of regulation of protein metabolism since differences in metabolism between species and changes occurring during growth are both outward expressions of genetic control mechanisms that determine the form and characteristics of an animal The other section in this volume is a survey of methods appropriate to the study of protein metabolism in mammals This part of the work should prove of special interest to investigators who require a critical evaluation of the possibilities and limitations of methods applicable to intact animals
