**Mathematical Sciences in Canada** Klaus P. Beltzner, Gordon D. Edwards, Albert John Coleman, 1976     Mathematical Sciences in Canada ,1975     **Mathematical Sciences in Canada** Klaus P. Beltzner, Gordon D. Edwards, Albert John Coleman, 1976     **The Mathematical Sciences in 2025** National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on the Mathematical Sciences in 2025, 2013-06-13 The mathematical sciences are part of nearly all aspects of everyday life the discipline has underpinned such beneficial modern capabilities as Internet search medical imaging computer animation numerical weather predictions and all types of digital communications The Mathematical Sciences in 2025 examines the current state of the mathematical sciences and explores the changes needed for the discipline to be in a strong position and able to maximize its contribution to the nation in 2025 It finds the vitality of the discipline excellent and that it contributes in expanding ways to most areas of science and engineering as well as to the nation as a whole and recommends that training for future generations of mathematical scientists should be re assessed in light of the increasingly cross disciplinary nature of the mathematical sciences In addition because of the valuable interplay between ideas and people from all parts of the mathematical sciences the report emphasizes that universities and the government need to continue to invest in the full spectrum of the mathematical sciences in order for the whole enterprise to continue to flourish long term     *Mathematical sciences in Canada* A. John Coleman, Gordon D. Edwards, Klaus P. Beltzner, 1975     *A History of Mathematics in the United States and Canada* David E. Zitarelli, Della Dumbaugh, Stephen F. Kennedy, 2022-07-28 This is the first truly comprehensive and thorough history of the development of a mathematical community in the United States and Canada This second volume starts at the turn of the twentieth century with a mathematical community that is firmly established and traces its growth over the next forty years at the end of which the American mathematical community is pre eminent in the world In the preface to the first volume of this work Zitarelli reveals his animating philosophy I find that the human factor lends life and vitality to any subject History of mathematics in the Zitarelli conception is not just a collection of abstract ideas and their development It is a community of people and practices joining together to understand perpetuate and advance those ideas and each other Telling the story of mathematics means telling the stories of these people their accomplishments and triumphs the institutions and structures they built their interpersonal and scientific interactions and their failures and shortcomings One of the most hopeful developments of the period 1900 1941 in American mathematics was the opening of the community to previously excluded populations Increasing numbers of women were welcomed into mathematics many of whom including Anna Pell Wheeler Olive Hazlett and Mayme Logsdon are profiled in these pages Black mathematicians were often systemically excluded during this period but in spite of the obstacles Elbert Frank Cox Dudley Woodard David Blackwell and others built careers of significant accomplishment that are described here The effect on the substantial

community of European immigrants is detailed through the stories of dozens of individuals In clear and compelling prose Zitarelli Dumbaugh and Kennedy spin a tale accessible to experts general readers and anyone interested in the history of science in North America      **Companion Encyclopedia of the History and Philosophy of the Mathematical Sciences**

**Methods in Seismic Exploration and Reservoir Modeling** William Edward Fitzgibbon, 1986-01-01     *Stochastic Chemical Reaction Systems in Biology* Hong Qian, Hao Ge, 2021-10-18 This book provides an introduction to the analysis of stochastic dynamic models in biology and medicine The main aim is to offer a coherent set of probabilistic techniques and mathematical tools which can be used for the simulation and analysis of various biological phenomena These tools are illustrated on a number of examples For each example the biological background is described and mathematical models are developed following a unified set of principles These models are then analyzed and finally the biological implications of the mathematical results are interpreted The biological topics covered include gene expression biochemistry cellular regulation and cancer biology The book will be accessible to graduate students who have a strong background in differential equations the theory of nonlinear dynamical systems Markovian stochastic processes and both discrete and continuous state spaces and who are familiar with the basic concepts of probability theory     **Meta-Ecosystem Dynamics** Frederic Guichard, Justin Marleau, 2021-09-25 This book presents current meta ecosystem models and their derivation from classical ecosystem and metapopulation theories Specifically it reviews recent modelling efforts that have emphasized the role of nonlinear dynamics on spatial and food web networks and which have cast their implications within the context of spatial synchrony and ecological stoichiometry It suggests that these recent advances naturally lead to a generalization of meta ecosystem theories to spatial fluxes of matter that have both a trophic and non trophic impact on species Ecosystem dynamics refers to the cycling of matter and energy across ecological compartments through processes such as consumption and recycling Spatial

dynamics established its ecological roots with metapopulation theories and focuses on scaling up local ecological processes through the limited movement of individuals and matter Over the last 15 years theories integrating ecosystem and spatial dynamics have quickly coalesced into meta ecosystem theories the focus of this book The book will be of interest to graduate students and researchers who wish to learn more about the synthesis of ecosystem and spatial dynamics which form the foundation of the theory of meta ecosystems

*Introduction to Reaction-Diffusion Equations* King-Yeung Lam, Yuan Lou, 2022-12-01 This book introduces some basic mathematical tools in reaction diffusion models with applications to spatial ecology and evolutionary biology It is divided into four parts The first part is an introduction to the maximum principle the theory of principal eigenvalues for elliptic and periodic parabolic equations and systems and the theory of principal Floquet bundles The second part concerns the applications in spatial ecology We discuss the dynamics of a single species and two competing species as well as some recent progress on  $N$  competing species in bounded domains Some related results on stream populations and phytoplankton populations are also included We also discuss the spreading properties of a single species in an unbounded spatial domain as modeled by the Fisher KPP equation The third part concerns the applications in evolutionary biology We describe the basic notions of adaptive dynamics such as evolutionarily stable strategies and evolutionary branching points in the context of a competition model of stream populations We also discuss a class of selection mutation models describing a population structured along a continuous phenotypical trait The fourth part consists of several appendices which present a self contained treatment of some basic abstract theories in functional analysis and dynamical systems Topics include the Krein Rutman theorem for linear and nonlinear operators as well as some elements of monotone dynamical systems and abstract competition systems Most of the book is self contained and it is aimed at graduate students and researchers who are interested in the theory and applications of reaction diffusion equations
