Mathematical Methods in Time Series Analysis and Digital Image Processing Rainer Dahlhaus, Jürgen Kurths, Peter Maass, Jens Timmer, 2007-12-20 This coherent and articulate volume summarizes work carried out in the field of theoretical signal and image processing It focuses on non linear and non parametric models for time series as well as on adaptive methods in image processing The aim of this volume is to bring together research directions in theoretical signal and imaging processing developed rather independently in electrical engineering theoretical physics mathematics and the computer sciences *A First Course in Numerical Analysis* Anthony Ralston, Philip Rabinowitz, 2001-01-01 Outstanding text oriented toward computer solutions stresses errors in methods and computational efficiency Problems some strictly mathematical others requiring a computer appear at the end of each chapter **Mathematical Methods for Digital Computers Vol 1?** Anthony Ralston, 1960 Journal of Research of the National Bureau of Standards, 1970 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1978 **Journal of Research of the National Bureau of Standards** United States. National Bureau of Standards, 1970 Advances in Hydrosience Ben Chie Yen, 2013-10-22 *Advances in Hydrosience* Volume 14 1986 covers topics on the frontiers of hydrosience including urban hydrology remote sensing sewer hydraulics and computational hydraulics The book presents articles on state of the art theory and practice in sewer hydraulics and the passive microwave remote sensing of soil moisture An article on the numerical modeling of unsteady open channel flow is also encompassed Hydraulic engineers hydrologists earth scientists agricultural engineers soil scientists environmental engineers and urban designers and planners will find the text invaluable **Mathematical Methods for Engineering Applications** Deolinda M. L. D. Rasteiro, Fatih Yilmaz, Araceli Queiruga-Dios, Jesús Martín Vaquero, Ion Mierlus Mazilu, 2025-08-02 This proceedings volume compiles papers presented at the 5th International Conference on Mathematics and its Applications in Science and Engineering ICMASE 2024 held on September 16 18 2024 by the Polytechnic Institute of Coimbra Portugal The ICMASE 2024 was a hybrid conference featuring both in person and virtual attendance The works in this volume explore recent developments in the application of mathematics to science and engineering focusing on mathematical and computational modeling of real world problems Topics include algebra and number theory analysis geometry statistics computational and discrete mathematics as well as their intersections with engineering applications Additionally educational aspects of mathematics in engineering fields are addressed This volume is intended for researchers practitioners and graduate students particularly those interested in advanced methods for applying mathematics across various contexts and fields New Digital Signal Processing Methods Raoul R. Nigmatullin, Paolo Lino, Guido Maione, 2020-05-23 This book is intended as a manual on modern advanced statistical methods for signal processing The objectives of signal processing are the analysis synthesis and modification of signals measured from different natural phenomena including engineering applications as well Often the measured signals are affected by noise distortion

and incompleteness and this makes it difficult to extract significant signal information The main topic of the book is the extraction of significant information from measured data with the aim of reducing the data size while keeping the basic information knowledge about the peculiarities and properties of the analyzed system to this aim advanced and recently developed methods in signal analysis and treatment are introduced and described in depth More in details the book covers the following new advanced topics and the corresponding algorithms including detailed descriptions and discussions the Eigen Coordinates ECs method The statistics of the fractional moments The quantitative universal label QUL and the universal distribution function for the relative fluctuations UDFRF the generalized Prony spectrum the Non orthogonal Amplitude Frequency Analysis of the Smoothed Signals NAFASS the discrete geometrical invariants DGI serving as the common platform for quantitative comparison of different random functions Although advanced topics are discussed in signal analysis each subject is introduced gradually with the use of only the necessary mathematics and avoiding unnecessary abstractions Each chapter presents testing and verification examples on real data for each proposed method In comparison with other books here it is adopted a more practical approach with numerous real case studies
