Mathematical Chess Dr George Ho,2017-06-28 Mathematical chess is a two player educational and entertaining game played on ten digit pieces 0 1 2 3 4 5 6 7 8 9 and six operator pieces addition subtraction multiplication division power and root The chessboard is a grid made up of nine vertical and nine horizontal lines It is flexible and suitable for all students from middle and high schools to universities The excessive use of electronic calculators and games has caused a negative impact on the alertness of the minds and the numerical abilities of students at all levels Dr Ryan said In numeracy the young teenage student in 2003 was approximately a quarter of a grade level behind his or her counterpart in 1964 This was reported in the article Grade Worse Than in 1960s SMH 11 February 2008 Students love challenges and competitions Dr Robert C Ferguson writes A learning environment organised around games has a positive effect on students attitudes towards learning Teachers Guide Research and Benefits of Chess 11 October 2006 The above statements drive the implementation of this mathematical chess game Like European chess and Chinese chess mathematical chess teaches strategy planning problem solving memory improvement decision making concentration perseverance observation analysis and organisation skill Mathematical chess itself also promotes numerical abilities mental alertness and speedy calculation The numeracy performance of students in many countries has not improved since 1960 not because of the incompetence of the teachers but because an educational game interesting and challenging enough to attract students attention did not exist Mathematical chess can help resolve this drawback The authors dream is to see mathematical chess become a popular game in all middle and high schools and to see the love and passion of mathematics flowering in the minds of young people around the world New Math Chess Dr.

Watkins,2004 Publisher Description **Learning Chess To Improve Math**

Amanda Ho, Frank Ho,2020-01-24 How did I start to write this Learning Chess to Improve Math workbook I started to teach my son chess when he was five years old At that time a lot of information I had read indicated that there was a strong relationship between mathematics and chess My son was interested in chess so what would happen if he carried the same interest in chess on to a subject which would require him to use his chess knowledge What could chess offer in mathematics

education These kinds of questions sparked my interest in studying the relationship between chess and math What I had found was there had been many chess or math puzzles published but I was not able to find a collection of mathematical chess problems that was specifically created for youngsters In 1995 I was involved in teaching math and chess at the same time and I started to seriously look into the possibility of creating some math and chess hybrid problems This is how my son and I started to create the first generation of Math and Chess integrated workbook titled Mathematical Chess Puzzles for Juniors ISBN 0 9683967 0 4 and it was archived at National Library of Canada It is designed and written for the purpose of learning all kinds of problem solving skills through over 100 mind provoking and sometimes mind boggling mathematical chess puzzles The uniqueness of this book is that only the basic chess knowledge and the elementary math ability are needed to solve most of these puzzles I have been working on refining the contents ever since and after almost 20 years of working the first math and chess workbook I have incorporated many math concepts and today s version is the fourth generation This workbook of integrating chess and math puzzles could be used as a supplemental or enriched material to supplement math curriculum World s first and copyrighted Mathematical Chess Puzzles for Juniors workbook The first edition of workbook Mathematical Chess Puzzles for Juniors created in 1995 was a world s first I did a thorough literature and library catalogues searches and publicized my workbook on the internet including rec games chess misc resulted in nothing similar to my workbook had ever been published There was no integrated chess and math workbook ever published for the elementary students at the time when I published my workbook in 1995 In addition I have updated the workbook since I published the first one 20 years ago with many new and innovative ideas still my workbook is the only one on the market It would be devastating for me if some copycat just copied my ideas and formats of worksheets and started to commercialize it To protect my intellectual property I am the world s first on the following ideas and concepts and I am the original creator of unique formats of worksheets *Ho Math, Chess, and Puzzles for Grade 1 and Under* Frank Ho, Amanda Ho, 2017-12-28 Many books have suggested chess related math projects for teachers to use but this workbook is the world firstly created for students under grade 1 to combine chess directly into math computation worksheets This workbook teaches basic computations in addition and subtraction mostly for one digit operations It also includes mathematical puzzles and mathematical chess puzzles Some puzzles combine arithmetic chess and Sudoku all in one This special puzzle is called Frankho ChessDoku A world s first invention maze called Frankho ChessMaze is also included in this workbook To understand a bit more about Ho Math Chess teaching philosophy and its worksheet watch the following video <https://www.youtube.com/watch?v=Td3SKp7cukA> Please email Frank Ho at fho1928@gmail.com for any problems suggestions or concerns I started to get involved in chess teaching at the time when my son was about 6 years old He showed interest in a set of chess placed on the table in the living room He was excited about finding out that by making a right move he was rewarded with taking his opponent s piece Later we studied chess together and he became a Canadian junior chess champion and a FIDE chess master My interest shifted

from playing chess itself to studying the relation between chess and mathematics Eventually I created this Ho Math Chess and Puzzles for Grade 1 and Under workbook There are many pure math puzzles or chess puzzles only workbooks on the market How this Ho Math Chess and Puzzles for Grade 1 and Under workbook sets itself apart from others is that it contains one of a kind mathematical chess puzzles in which math concepts and chess knowledge are integrated using my invention of SCL Symbolic Chess Language to link math and chess and this discovery is the world's first SCL is based on the chess set which I created using a geometry concept of line segments and lines This workbook is a revolutionary breakthrough in teaching math using game based teaching method Many problems require children to look for problems using spatial relations and patterns also find their answers by computing in multi step As a result this math and chess integrated workbook takes the boredom and repetitions away from computing practice Ho Math Chess teaching method can improve children's math scores and problem solving ability develop children's logic and critical thinking skills It is a natural health food for improving brainpower Most of the teaching organizations use a very classic teaching method that is to teach basic numeracy or counting skills they do not know how to systematically integrate a chess game into math worksheets Ho Math Chess is the only one and the world's first to have integrated chess and puzzles into math calculation worksheets to make math learning fun This workbook uses chess pieces chess points and chessboard etc to instill mathematical concepts related to the pattern logic geometry transformation number theory and many many other math concepts This workbook is created with the ideas of learning math in multi concept multi sensory multi direction and hands on approach It is an innovative product of supplementing elementary mathematics The purposes of this workbook are to develop and train the skills of the following areas

Corridors (The Geometry, Physics and Mathematics of Chess) Vol 1 Herman Tolbert Sr., 2011-09-14 Chess enthusiast Herman Tolbert Sr takes three of the four elements of chess space time force and parallels a one to one mapping that relates Geometry Physics and Mathematics in a unique theme he terms Corridors Compiling over the board tournament experience along with online worldwide games as well as friendly pick up games Corridors is a repeated process which eventually zones in on the King or significant material which has game winning advantages This work hopes to demonstrate Mr Tolbert's classroom teaching skills and his keen analytical ability to breakdown the complex into simpler forms Corridors is a combination of whole or partial rank's file's and square's which are controlled to a lasting degree which yield advantageous results Many chess concepts are conveyed by novice to Grandmasters but this unique work though not for the very beginner can be applied by the many eager to improve players no matter the skill level It is with this spirit that Mr Tolbert wishes to share what he feels is a path of enlightenment whose fruits of labor is a growth in understanding chess which can only lead to more victories
