“How is math used in packaging candy?”

When marketing a product such as candy, how the product is packaged can be as important as how it tastes. A marketer must decide what shape container is best, how much candy the container should hold, and how much material it will take to make the chosen container. To make these decisions, you must be able to identify three-dimensional objects, calculate their volumes, and calculate their surface areas.

You will solve problems about packaging in Lesson 7-5.
