Mathematical Methods for Economic Theory 2 James C. Moore, 2013-03-14 This is the second of a two volume work intended to function as a textbook well as a reference work for economic for graduate students in economics as scholars who are either working in theory or who have a strong interest in economic theory While it is not necessary that a student read the first volume before tackling this one it may make things easier to have done so In any case the student undertaking a serious study of this volume should be familiar with the theories of continuity convergence and convexity in Euclidean space and have had a fairly sophisticated semester s work in Linear Algebra While I have set forth my reasons for writing these volumes in the preface to Volume 1 of this work it is perhaps in order to repeat that explanation here I have undertaken this project for three principal reasons In the first place I have collected a number of results which are frequently useful in economics but for which exact statements and proofs are rather difficult to find for example a number of results on convex sets and their separation by hyperplanes some results on correspondences and some results concerning support functions and their duals Secondly while the mathematical topics taken up in these two volumes are generally taught somewhere in the mathematics curriculum they are never insofar as I am aware done in a two course sequence as they are arranged here
