Mathematische Annalen Band 155:

Proceedings of the London Mathematical Society London Mathematical Society, 1926 Papers presented to J E Littlewood on his 80th birthday issued as 3d ser v 14 A 1965 Mathematische Annalen Alfred Clebsch, Carl Neumann, Felix Klein. Adolph Mayer, David Hilbert, Otto Blumenthal, Albert Einstein, Constantin Carathéodory, Erich Hecke, Bartel Leendert Waerden, Heinrich Behnke, 1921 Publishes original contributions from the entire field of mathematics AN ESSAY ON THE MATHEMATICAL METHODS OF THEORY OF GENERAL RELATIVITY Edoardo Confalonieri, 2019-01-21 The basic concepts of a method for a general integral of the Field Equations of the Theory of General Relativity are outlined An extended and revised version is currently in preparation and it will be uploaded as soon as ready for publication Markov's Theorem and 100 Years of the Uniqueness Conjecture Martin Aigner, 2013-07-18 This book takes the reader on a mathematical journey from a number theoretic point of view to the realm of Markov's theorem and the uniqueness conjecture gradually unfolding many beautiful connections until everything falls into place in the proof of Markov s theorem What makes the Markov theme so attractive is that it appears in an astounding variety of different fields from number theory to combinatorics from classical groups and geometry to the world of graphs and words On the way there are also introductory forays into some fascinating topics that do not belong to the standard curriculum such as Farey fractions modular and free groups hyperbolic planes and algebraic words The book closes with a discussion of the current state of knowledge about the uniqueness conjecture which remains an open challenge to this day All the material should be accessible to upper level undergraduates with some background in number theory and anything beyond this level is fully explained in the text This is not a monograph in the usual sense concentrating on a specific topic Instead it narrates in five parts Numbers Trees Groups Words Finale the story of a discovery in one field and its many manifestations in others as a tribute to a great mathematical achievement and as an intellectual pleasure contemplating the marvellous unity of all mathematics Mathematische Annalen ,1887 Ernst Zermelo - Collected Works/Gesammelte Werke Ernst Zermelo, 2010-01-20 Ernst Zermelo 1871 1953 is regarded as the founder of axiomatic set theory and best known for the first formulation of the axiom of choice However his papers include also pioneering work in applied mathematics and mathematical physics. This edition of his collected papers will consist of two volumes Besides providing a biography the present Volume I covers set theory the foundations of mathematics and pure mathematics and is supplemented by selected items from his Nachlass and part of his translations of Homer's Odyssey Volume II will contain his work in the calculus of variations applied mathematics and physics The papers are each presented in their original language together with an English translation the versions facing each other on opposite pages Each paper or coherent group of papers is preceded by an introductory note provided by an acknowledged expert in the field which comments on the historical background motivations accomplishments and influence Around Caspar Wessel and the Geometric Representation of Complex Numbers Jesper Lützen, 2001 The Emergence of

the American Mathematical Research Community, 1876-1900 Karen Hunger Parshall, David E. Rowe, 1994 This volume traces the transformation of the United States from a mathematical backwater to a major presence during the guarter century from 1876 to 1900 Presenting a detailed study of the major figures involved in this transformation it focuses on the three most influential individuals the British algebraist James Joseph Sylvester the German standard bearer Felix Klein and the American mathematician Eliakim Hastings Moore and on the principal institutions with which they were associated the Johns Hopkins University Gottingen University and the University of Chicago This book further analyzes the research traditions these men and their institutions represented the impact they had on the second generation of American mathematical researchers and the role of the American Mathematical Society in these developments This is the first work ever written on the history of American mathematics during this period and one of the few books that examines the historical development of American mathematics from a wide perspective By placing the development of American mathematics within the context of broader external factors affecting historical events the authors show how the character of American research was decisively affected by the surrounding scientific educational and social contexts of the period Aimed at a general mathematical audience and at historians of science this book contains an abundance of unpublished archival material numerous rare photographs and an extensive bibliography Springer-Verlag: History of a Scientific Publishing House Heinz Götze, 2008-12-10 A chronicle written only by someone for whom the present important Goethe Maximen und Reflexionen The second volume of our company s history differs from the first in several ways With a great appreciation of history Heinz Sarkowski has impressively reconstructed the company cor spondence which is fortunately almost completely preserved and made it speak There is an inexhaustible amount of c respondence pertaining to the period I have taken it upon myself to cover and working through it properly not only would have required many years but also would have detracted from the immediacy of the account Thus I decided to proceed from personal experience to describe what has happened and to provide details gleaned from the correspondence I have counted here by no means only my own but rather the personal experiences of the many company members and employees who are mentioned below With the founding of the New York firm developments branch out becoming parallel but separate and the change from one scene to another repeatedly interrupts the continuing course of events and the chronological flow of the report In this connection the occasional repetition of certain facts was avoidable In some places however it seemed more appropriate not to interrupt particular lines of development but to describe them in continuity without regard to specific periods of time Variational Principles of Continuum Mechanics Victor Berdichevsky, 2009-09-18 There are about 500 books on variational principles. They are concerned mostly with the mathematical aspects of the topic The major goal of this book is to discuss the physical origin of the variational principles and the intrinsic interrelations between them For example the Gibbs principles appear not as the rst principles of the theory of thermodynamic equilibrium but as a consequence of the Einstein formula for thermodynamic uctuations The mathematical

issues are considered as long as they shed light on the physical outcomes and or provide a useful technique for direct study of variational problems Thebookisacompletely rewritten version of the author smonograph Variational Principles of Continuum Mechanics which appeared in Russian in 1983 I have been postponing the English translation because I wished to include the variational pr ciples of irreversible processes in the new edition Reaching an understanding of this subject took longer than I expected In its nal form this book covers all aspects of the story The part concerned with irreversible processes is tiny but it determines the accents put on all the results presented The other new issues included in the book are entropy of microstructure variational principles of vortex line dynamics va ational principles and integration in functional spaces some stochastic variational problems variational principle for probability densities of local elds in composites with random structure variational theory of turbulence these topics have not been covered previously in monographic literature The Eightfold Way Silvio Levy, 2001-05-28 Expository and research articles by renowned mathematicians on the myriad properties Annales Scientifiques de L'École Normale Supérieure ,1891 of the Klein quartic Annales Scientifiques de L'École Normale Supérieure École normale supérieure (France),1891 Annales scientifiques de l'Ecole Normale Supérieure ,1891 Springer-Verlag: History of a Scientific Publishing House Heinz Sarkowski, Heinz Götze,1996-10-07 A chronicle written only by someone for whom the present important Goethe Maximen und Reflexionen The second volume of our company s history differs from the first in several ways With a great appreciation of history Heinz Sarkowski has impressively reconstructed the company cor spondence which is fortunately almost completely preserved and made it speak There is an inexhaustible amount of c respondence pertaining to the period I have taken it upon myself to cover and working through it properly not only would have required many years but also would have detracted from the immediacy of the account Thus I decided to proceed from personal experience to describe what has happened and to provide details gleaned from the correspondence I have counted here by no means only my own but rather the personal experiences of the many company members and employees who are mentioned below With the founding of the New York firm developments branch out becoming parallel but separate and the change from one scene to another repeatedly interrupts the continuing course of events and the chronological flow of the report In this connection the occasional repetition of certain facts was avoidable In some places however it seemed more appropriate not to interrupt particular lines of development but to describe them in continuity without regard to specific periods of time From Groups to Categorial Algebra Dominique Bourn, 2017-06-13 This book gives a thorough and entirely self contained in depth introduction to a specific approach to group theory in a large sense of that word The focus lie on the relationships which a group may have with other groups via universal properties a view on that group from the outside This method of categorical algebra is actually not limited to the study of groups alone but applies equally well to other similar categories of algebraic objects By introducing protomodular categories and Mal tsev categories which form a larger class the structural properties of the category Gp of groups show how

they emerge from four very basic observations about the algebraic litteral calculus and how studied for themselves at the conceptual categorical level they lead to the main striking features of the category Gp of groups Hardly any previous knowledge of category theory is assumed and just a little experience with standard algebraic structures such as groups and monoids Examples and exercises help understanding the basic definitions and results throughout the text and Tensor Categories Nicolás Andruskiewitsch, Juan Cuadra, Blas Torrecillas, 2013-02-21 This volume contains the proceedings of the Conference on Hopf Algebras and Tensor Categories held July 4 8 2011 at the University of Almeria Almeria Spain The articles in this volume cover a wide variety of topics related to the theory of Hopf algebras and its connections to other areas of mathematics In particular this volume contains a survey covering aspects of the classification of fusion categories using Morita equivalence methods a long comprehensive introduction to Hopf algebras in the category of species and a summary of the status to date of the classification of Hopf algebras of dimensions up to 100 Among other topics discussed in this volume are a study of normalized class sum and generalized character table for semisimple Hopf algebras a contribution to the classification program of finite dimensional pointed Hopf algebras relations to the conjecture of De Concini Kac and Procesi on representations of quantum groups at roots of unity a categorical approach to the Drinfeld double of a braided Hopf algebra via Hopf monads an overview of Hom Hopf algebras and several discussions on the crossed product construction in different settings The Selected Correspondence of L.E.J. Brouwer Dirk von Dalen, 2011-07-25 L E J Brouwer 1881 1966 is best known for his revolutionary ideas on topology and foundations of mathematics intuitionism The present collection contains a mixture of letters university and faculty correspondence has been included some of which shed light on the student years and in particular on the exchange of letters with his PhD adviser Korteweg Acting as the natural sequel to the publication of Brouwer's biography this book provides instrumental reading for those wishing to gain a deeper understanding of Brouwer and his role in the twentieth century Striking a good balance of biographical and scientific information the latter deals with innovations in topology Cantor Schoenflies style and the new topology and foundations The topological period in his research is well represented in correspondence with Hilbert Schoenflies Poincar Blumenthal Lebesque Baire Koebe and foundational topics are discussed in letters exchanged with Weyl Fraenkel Heyting van Dantzig and others There is also a large part of correspondence on matters related to the interbellum scientific politics This book will appeal to both graduate students and researchers with an interest in topology the history of mathematics the foundations of mathematics philosophy and general science **Vector Fields with Applications to Thermodynamics and** Irreversibility Luis Manuel Braga da Costa Campos, Luís António Raio Vilela, 2022-11-30 Vector Fields with Applications to Thermodynamics and Irreversibility is part of the series Mathematics and Physics for Science and Technology which combines rigorous mathematics with general physical principles to model practical engineering systems with a detailed derivation and interpretation of results Volume V presents the mathematical theory of partial differential equations and

methods of solution satisfying initial and boundary conditions and includes applications to acoustic elastic water electromagnetic and other waves the diffusion of heat mass and electricity and their interactions This is the first book of the volume The second book of volume V continues this book on thermodynamics focusing on the equation of state and energy transfer processes including adiabatic isothermal isobaric and isochoric These are applied to thermodynamic cycles like the Carnot Atkinson Stirling and Barber Brayton cycles that are used in thermal devices including refrigerators heat pumps and piston jet and rocket engines In connection with jet propulsion adiabatic flows and normal and oblique shock waves in free space and nozzles with variable cross section are considered. The equations of fluid mechanics are derived for compressible two phase flow in the presence of shear and bulk viscosity thermal conduction and mass diffusion The thermodynamic cycles are illustrated by detailed calculations modelling the operation of piston turbojet and rocket engines in various ambient conditions ranging from sea level the atmosphere of the earth at altitude and vacuum of space for the propulsion of land sea air and space vehicles The book is intended for graduate students and engineers working with mathematical models and can be applied to problems in mechanical aerospace electrical and other branches of engineering dealing with advanced technology and also in the physical sciences and applied mathematics This book Simultaneously covers rigorous mathematics general physical principles and engineering applications with practical interest Provides interpretation of results with the help of illustrations Includes detailed proofs of all results L M B C Campos was chair professor and the Coordinator of the Scientific Area of Applied and Aerospace Mechanics in the Department of Mechanical Engineering and also the director and founder of the Center for Aeronautical and Space Science and Technology until retirement in 2020 L A R Vilela is currently completing an Integrated Master's degree in Aerospace Engineering at Institute Superior Tecnico 1ST of Lisbon University
