Maths In The Mind A Process Approach To Mental Strategies:

Maths in the Mind Ann Baker, 1991 Maths in the Mind suggests starting points for encouraging children to become fluent and independent thinkers in math lessons It presents ideas for building on strategies that children acquire naturally before they come to school and outlines a rich variety of strategies that research has found children develop as they become more competent at mathematics The activities presented in this book encourage children to use and develop these strategies as part of their mathematical thinking across the full range of the primary school The activities have been extensively trialled in the classroom as the photographs which accompany the text demonstrate Maths in the Mind emphasizes the processes involved in mathematical thinking rather than the right answer Children are encouraged to explore to delve into what they do know and this reduces the sense of helplessness that can occur when they don't know what to do Maths in the Mind complements Mathematics in Process also written by Ann and Johnny Baker *Talking Mathematics* Rebecca B. Corwin, Judith Storeygard, Sabra Price, 1996 The book is designed for experienced elementary teachers and education students who are interested in supporting talk and building a culture of mathematical inquiry in the classroom **Language in the Mathematics Classroom** Rachel Griffiths, Margaret Clyne, 1994 What do children's responses tell us about their understanding of mathematics How do children's interpretations of mathematical language affect their performance What are the implications for teaching and learning Language in the Mathematics Classroom provides imaginative and varied suggestions for extending children's responses in all modes of communication spoken written graphic and active allowing them to broaden and deepen their mathematical understanding Language in the Mathematics Classroom explores the connections between mathematics and language looking at the many ways that children talk about represent and record mathematics Teaching the Language Arts Cathy Collins Block, 2001 This book explains and demonstrates with a clear step by step approach how communication and thinking competencies can be enhanced through instruction This revision elaborates further on a language arts program built to focus on the needs of individual students Each of the fourteen chapters is divided into three sections covering theoretical foundations practice and professional development giving the text a practical usable organization The second and third sections apply the principles from the first section to the classroom Features in these sections show specific teaching strategies that offer practical ideas for teachers to develop an ongoing and successful teaching repertoire For Language Arts teachers *Effective Strategies in the Teaching of Mathematics* Velta Clarke, 2003 Effective Strategies in the Teaching of Mathematics is essential reading for candidates intending to be teachers of middle and high school mathematics It provides a standard based approach to the teaching of mathematics in realistic situations and should be part of the library collection of all those who wish to teach well Indiana Media Journal, 1995 *Elementary and Middle School Mathematics* John A. Van de Walle, 1998 John A Van de Walle has written a book that helps readers make sense of mathematics and become confident in their ability to teach mathematics to children K to 8

Elementary and Middle School Mathematics consists of 16 chapters reflecting the view that all mathematics can be taught through a problem solving approach that motivates children and builds their confidence as they learn. This book thoroughly discusses the new standards and clearly develops four key aspects of teaching mathematics: the nature of mathematics as a science of pattern and order; an understanding of how children learn mathematics; a problem solving view of teaching mathematics; and specific methods for integrating assessment with instruction. Simple yet effective classroom activities are woven throughout the chapters as well as suggestions for technology and literature.
