West, 2017-09-11 Complexity increases with increasing system size in everything from organisms to organizations The nonlinear dependence of a system s functionality on its size by means of an

allometry relation is argued to be a consequence of their joint dependency on complexity information. In turn, complexity is proven to be the source of allometry and to provide a new kind of force entailed by a system's information gradient. Based on first principles, the scaling behavior of the probability density function is determined by the exact solution to a set of fractional differential equations. The resulting lowest order moments in system size and functionality gives rise to the empirical allometry relations. Taking examples from various topics in nature, the book is of interest to researchers in applied mathematics as well as investigators in the natural, social, physical and life sciences.

Contents: Complexity, Empirical allometry, Statistics, scaling and simulation, Allometry theories, Strange kinetics, Fractional probability calculus.

Nature-Inspired Networking Phan Cong-Vinh, 2018-02-13. Nature inspired includes roughly speaking bio inspired, physical inspired, social inspired and so on. This book contains highly original contributions about how nature is going to shape networking systems of the future. Hence it focuses on rigorous approaches and cutting edge solutions which encompass three classes of major methods: 1 Those that take inspiration from nature for the development of novel problem solving techniques; 2 Those that are based on the use of networks to synthesize natural phenomena; and 3 Those that employ natural materials to compute or communicate.

Nature-Inspired Computing Applications in Advanced Communication Networks Gupta, Govind P., 2019-12-27. With the rapid growth of technology in society, communication networks have become a heavily researched topic. Implementing these advanced systems is a challenge, however, due to the abundance of optimization problems within these networks. The use of meta heuristic algorithms and nature inspired computing has become a prevalent technique among researchers for solving these complex problems within communication networks. Despite its popularity, this specific computing technique lacks the appropriate amount of research that is needed for professionals to grasp a definite understanding. *Nature Inspired Computing Applications in Advanced Communication Networks* is a collection of innovative research on the methods and applications of natural computation techniques and algorithms within communication systems such as wireless sensor networks, vehicular adhoc networks and internet of things. While highlighting topics including mobile sensor deployment, routing optimization and sleep scheduling, this book is ideally designed for researchers, network professionals, computer scientists, mathematicians, developers, scholars, educators and students seeking to enhance their understanding of nature inspired computing and its solutions within various advanced communication networks.

Nature-inspired Methods in Chemometrics: Genetic Algorithms and Artificial Neural Networks Riccardo Leardi, 2003-12-03. In recent years, Genetic Algorithms (GA) and Artificial Neural Networks (ANN) have progressively increased in importance amongst the techniques routinely used in chemometrics. This book contains contributions from experts in the field, is divided in two sections: GA and ANN. In each part, tutorial chapters are included in which the theoretical bases of each technique are expertly but simply described. These are followed by application chapters in which special emphasis will be

given to the advantages of the application of GA or ANN to that specific problem compared to classical techniques and to the risks connected with its misuse This book is of use to all those who are using or are interested in GA and ANN Beginners can focus their attentions on the tutorials whilst the most advanced readers will be more interested in looking at the applications of the techniques It is also suitable as a reference book for students Subject matter is steadily increasing in importance Comparison of Genetic Algorithms GA and Artificial Neural Networks ANN with the classical techniques Suitable for both beginners and advanced researchers
