Norman Friedman

Naval Weapon Systems:

The Naval Institute Guide to World Naval Weapons Systems Norman Friedman, 1989 Lists and describes the weapons systems of all the world's navies including surface antiaircraft antisubmarine and mine warfare *Principles of Naval Weapon Systems* Craig M. Payne, 2006 Designed for present and future officers Payne's U S Naval Academy text provides a broad overview of naval weapon systems focusing on how a weapon system interacts within the physical constraints of the environment The publication is based on material drawn from previous texts of the same title Jane's Naval Weapon Systems E. R. Hooton, 1989 *The Naval Institute Guide to World Naval Weapon Systems* Norman Friedman, 2006 This guide remains the only complete reference to the weapons currently in service in ships submarines and naval aircraft around the world It is the only book of its type to explain the transformation of the U S Navy into a network centric force a transformation that has had immense consequences for choices of tactics weapons services and the systems coordinating them This guide also offers unparalleled coverage of the weapons sensors and command systems of the world's navies both those the U S Navy works with and those it may have to fight For the most complete and up to date information about weapons in every navy in the world this is the essential resource a work that in effect can serve as a textbook of modern naval technology BOOK JACKET *Naval Weapons Systems and the Contemporary Law of War* James J. Busuttil, 1998 This book provides the first comprehensive critical analysis of the regulation of naval weapons during armed conflict It examines the experience this century with the use of naval mines submarines and anti ship missiles the three main naval weapons The sources of international law relevant to an assessment of the law that is the extant conventions state practice military manuals war crimes prosecutions and the opinions of publicists are each extensively examined so that a clear picture of the law emerges The book examines the impact of agreements drawn up in peacetime on wartime conduct and focuses on the growth of law through customary practice While stating the law as it is today it also provides suggestions for the practical development of the law **Principles of**, 1985 **The Naval Institute Guide to World Naval Weapons Systems 1994 Update** Norman Friedman, 1994 **Principles of Naval Weapons Systems Workbook** David R. Directed Energy and Fleet Defense:

Implications for Naval Warfare, 2000 The introduction of directed energy weapons into twenty first century naval forces has the potential to change naval tactics as fundamentally as the transition from sail to steam Recent advances in directed energy technologies have made the development of both high energy laser and high power microwave weapons technically feasible This study examines the potential adaptation of such weapons for the defense of naval forces This study considers options for using directed energy systems on naval vessels in the context of the U S maritime strategy and emerging threats in international politics The framework for this study is an integrated system of microwave devices high energy lasers and surface to air missiles which are evaluated in terms of their ability to enhance anti ship cruise missile defense tactical air defense and fast patrol boat defense This study also examines collateral capabilities such as non lethal defensive measures and countersurveillance operations The global proliferation of increasingly sophisticated weapons and the expanding demands placed on its ever smaller navy require the United States to reassess its current approach to fleet operations This study concludes that directed energy technology has made sufficient progress to warrant the development of sea based weapons systems for deployment in the first two decades of the next century For operational and technical reasons a Nimitz class aircraft carrier may be the preferred platform for the initial implementation of directed energy weapons If successful the robust self defense capability provided by directed energy weapons will permit a fundamental shift in carrier battle group operations from a massed attrition oriented defense to a more dynamic dispersed offense
