Biologically-Inspired Collaborative Computing Mike Hinchey, Anastasia Pagnoni, Franz J. Rammig, Hartmut Schmeck, Look deep into nature and you will understand everything better advised Albert Einstein In recent years the research communities in Computer Science Engineering and other disciplines have taken this message to heart and a relatively new field of biologically inspired computing has been born Inspiration is being drawn from nature from the behaviors of colonies of ants of swarms of bees and even the human body This new paradigm in computing takes many simple autonomous objects or agents and lets them jointly perform a complex task without having the need for centralized control In

this paradigm these simple objects interact locally with their environment using simple rules Applications include optimization algorithms communications networks scheduling and decision making supply chain management and robotics to name just a few There are many disciplines involved in making such systems work from artificial intelligence to energy aware systems Often these disciplines have their own field of focus have their own conferences or only deal with specialized problems e g swarm intelligence biologically inspired computation sensor networks The Second IFIP Conference on Biologically Inspired Collaborative Computing aims to bridge this separation of the scientific community and bring together researchers in the fields of Organic Computing Autonomic Computing Self Organizing Systems Pervasive Computing and related areas We are very pleased to have two very important keynote presentations Swarm Robotics The Coordination of Robots via Swarm Intelligence Principles by Marco Dorigo Universit Libre de Bruxelles Belgium of which an abstract is included in this volume

Designing Enterprise Information Systems Boris Shishkov, 2019-11-21 This book brings together enterprise modeling and software specification providing a conceptual background and methodological guidelines that concern the design of enterprise information systems In this two corresponding disciplines enterprise engineering and software engineering are considered in a complementary way This is how the widely recognized gap between domain experts and software engineers could be effectively addressed The content is on the one hand based on a conceptual invariance embracing concepts whose essence transcends the barriers between social and technical disciplines while on the other the book is featuring a modeling duality by bringing together social theories that are underlying with regard to enterprise engineering and computing paradigms that are underlying as it concerns software engineering In addition the proposed approach as well as its guidelines and related notations further foster such enterprise software modeling by facilitating modeling generations and transformations Considering unstructured business information in the beginning the modeling process would progress through the methodological construction of enterprise models to reach as far as a corresponding derivation of software specifications Finally the enterprise software alignment is achieved in a component based way featuring a potential for re using modeling constructs such that the modeling effectiveness and efficiency are further stimulated For the sake of grounding the presented studies a case study and illustrative examples are considered They are not only justifying the idea of bringing together in a component based way enterprise modeling and software specification but they are also demonstrating various strengths and limitations of the proposed modeling approach The book was mainly written for researchers and graduate students in enterprise information systems and also for professionals whose work involves the specification and realization of such systems In addition researchers and practitioners entering these fields will benefit from the blended view on enterprise modeling and software specification for the sake of an effective and efficient design of enterprise information systems
