methodologies stability and speciation analysis The book highlights advanced analytical techniques such as gas chromatography and atomic absorption spectrometry providing a thorough understanding of the latest approaches for evaluating OMC levels in marine environments Particular attention is given to the fate and behaviour of OMCs in various environmental compartments their ecotoxicology and molecular modelling studies describing toxicity mechanisms The book also addresses global distribution patterns with a focus on hotspots and evaluates joint efforts for prevention and sustainability This volume is indispensable for researchers in marine chemistry postgraduate students industry scientists working on environmental pollutants ecologists studying marine ecosystems and policymakers involved in environmental protection It invites readers to think critically about sustainable development goals related to clean water SDG 6 and life below water SDG 14 emphasizing the need for continued research to mitigate the impact of hazardous materials like OMCs and for policy development

The Importance of Chemical "Speciation" in Environmental Processes M. Bernhard, F.E. Brinckman, P.J. Sadler, 2012-12-06 Report the editors replaced the term speciation wherever it occurred by identification and quantification or description of abundance or reactivity or transformation of a chemical species according to whichever one of the four meanings the author had evidently meant to convey In line with the Dahlem Workshop Model this Report comprises the background papers written in advance of the meeting on the current status of problems in environmental research and on advanced analytical techniques for the identification and quantification of chemical species as well as the group reports summarizing the results of the discussions held during the meeting Each group report was prepared during the meeting by one rapporteur with the help of members of that group and finalized by the rapporteur listed as the first author of the group report after the meeting taking into account both verbal comments made during the presentation of the reports in the plenary session at the end of the workshop and written comments received afterwards

Organic Metal and Metalloid Species in the Environment Alfred V. Hirner, Hendrik Emons, 2013-03-14 This book presents contributions by experts from diverse disciplines estimating the global levels of biogenic and anthropogenic emissions of organometalloid compounds and thus presenting insight into processes which influence the genesis as well as the distribution and stability of these species and their interaction with each other and other matrix compounds The authors evaluate identify potential hotspots of organometalloids which can negatively influence ecosystems and human health
