Origin Of The Earth And Moon:

Origin of the Earth and Moon Robin M. Canup, Kevin Righter, 2000-11-01 The age old question of how our home planet and its satellite originated has in recent times undergone a minor revolution The emergence of the giant impact theory as the most successful model for the origin of the Moon has been difficult to reconcile with some aspects of the Earth and the development of an integrated model for the origin of the Earth Moon system has been difficult for this reason However recent technical advances in experimental and isotopic work together with intensified interest in the modeling of planetary dynamics have produced a wealth of new results requiring a rethinking of models for the origin of the Earth and Moon This book is intended to serve as a resource for those scientists working closely in this field while at the same time it provides enough balance and depth to offer an introduction for students or technically minded general readers Its thirty chapters address isotopic and chemical constraints on accretion the dynamics of terrestrial planet formation the impact triggered formation of the Earth Moon system differentiation of the Earth and Moon the origin of terrestrial volatiles and conditions on the young Earth and Moon Covering such subjects as the history and origin of the Moon s orbit water on the Earth and the implications of Earth Moon interactions for terrestrial climate and life the book constitutes a state of the art overview of the most recent investigations in the field Although many advances have been made in our ability to evaluate competing models of the formation of the Earth Moon system there are still many gaps in our understanding This book makes great strides toward closing those gaps by highlighting the extensive progress that has been made and pointing toward future research

Origin of the Earth and Moon Alfred E. Ringwood, 2012-12-06 Since the beginning of civilization the origins of the Earth and Moon have been the subjects of continuing interest speculation and enquiry These are also among the most challenging of all scientific problems They are perhaps to a unique degree interdisciplinary having attracted the attention of philosophers astronomers mathematicians geologists chemists and physicists A large and diverse literature has developed far beyond the capacity of individuals to assimilate adequately Consequently most of those who attempt to present review syntheses in the area tend to reflect the perspectives of their own particular disciplines The present author s approach is that of a geochemist strongly influenced by the basic philosophy of Harold Urey Whereas most astronomical phenomena are controlled by gravitational and magnetic fields and by nuclear interactions Urey 1952 emphasized that the formation of the solar system occurred in a pressure temperature regime wherein the chemical properties of matter were at least as important as those of gravitational and magnetic fields This was the principal theme of his 1952 book *The Planets* which revolutionized our approach to this subject In many subsequent papers Urey strongly emphasized the importance of meteorites in providing critical evidence of chemical conditions in the primordial solar nebula and of the chemical fractionation processes which occurred during formation of the terrestrial planets This approach has been followed by most subsequent geochemists and cosmochemists

New Views of the Moon Bradley L. Jolliff, Mark A. Wieczorek, Charles K. Shearer, Clive R. Neal, 2018-12-17 Volume 60 of *Reviews in Mineralogy and Geochemistry* assesses the current state of knowledge of lunar geoscience given the data sets provided by missions of the 1990 s and lists remaining key questions as well as new ones for future exploration to address It documents how a planet or moon other than the world on which we live can be studied and understood in light of integrated

suites of specific kinds of information The Moon is the only body other than Earth for which we have material samples of known geologic context for study This volume seeks to show how the different kinds of information gained about the Moon relate to each other and also to learn from this experience thus allowing more efficient planning for the exploration of other worlds

Earth System History Steven M. Stanley, 2004-10-29 Designed for a new generation of readers Stanley's Earth System History is a reforging of his Exploring Earth and Life Through Time Adopting an earth system approach throughout Earth System History shows students how Earth's ecosystem has developed over time and how events in the past provide a perspective for dealing with present and future changes Clear and concise the new Second Edition of this introduction to historical geology is perfect for one term non majors courses and contains lots of new content and improved visuals

Origin of the Earth Horton E. Newsom, John H. Jones, Lunar and Planetary Institute, 1990 This volume includes contributions from 28 experts in their respective areas who present a broad range of information on planetary accretion and the origin and earliest history of the Earth The central theme of the book is the Giant Impact model for the formation of the moon which if correct has important implications regarding the early history of the Earth The book is being co published with the Lunar and Planetary Institute Houston

The Earth-Moon System B. G. Marsden, 2012-12-06 On January 20 21 1964 the Institute for Space Studies of the Goddard Space Flight Center National Aeronautics and Space Administration was host to an international group of astronomers physicists and Earth scientists gathered to discuss the Earth Moon system This was the sixth in a continuing series of interdisciplinary meetings on topics in space physics held at the Institute The conference was organized by G J F MacDonald of the University of California at Los Angeles and by R H Dicke of Princeton University The working title of the conference was The Dynamics of the Earth Moon System and indeed much of the contents of this proceedings volume is concerned with dynamical problems but the conference dealt with many other topics concerning the Earth Moon system and hence we have adopted the shorter title for this volume The conference proceedings have been somewhat rearranged from the order in which the papers were actually presented In doing this the editors are exercising hindsight to bring together closely related discussions The first paper by D Brouwer discusses the motions and moments of inertia of the Moon and their relation to the lunar figure and composition From this discussion it emerges there remain many uncertainties in the motion of the Moon associated with the lunar composition and the distribution of its mass

Readings from the Treatise on Geochemistry Heinrich D Holland, Karl K. Turekian, 2010-05-25 Readings from the Treatise on Geochemistry offers an interdisciplinary reference for scientists researchers and upper undergraduate and graduate level geochemistry students that is more affordable than the full Treatise For professionals this volume will provide an overview of the field as a whole For students it will provide more in depth introductory content than is found in broad based geochemistry textbooks Articles were selected from chapters across all volumes of the full Treatise and include The Origin and Earliest History of the Earth Compositional Evolution of the Mantle Evolution of Sedimentary Rocks Soil Formation

Geochemistry of Groundwater Geologic History of Seawater Hydrothermal Processes and Biogeochemistry of Primary Production in the Sea Comprehensive interdisciplinary and authoritative content selected by leading subject experts Robust illustrations figures and tables Affordably priced sampling of content from the full Treatise on Geochemistry **New View of the Moon 2** Clive R. Neal, Lisa R. Gaddis, Bradley L. Jolliff, Samuel J. Lawrence, Stephen J. Mackwell, Charles K. Shearer, Sarah N. Valencia, 2024-05-06 Much has happened in the world in the 17 years since the first New Views of the Moon was published as volume 60 of the Mineralogical Society of America in 2006 An exciting new era of lunar exploration has begun including the promise of resuming human lunar exploration exploring the lunar Poles and missions to many other high priority science targets It is fitting therefore to now summarize the current state of knowledge to the degree possible at a time when advancements in knowledge of the Moon are proceeding at a breakneck pace Therefore during this period of unprecedented lunar exploration activity and as we continue to rebound from a global pandemic we now happily announce this New Views of the Moon 2 volume summarizing the advances in lunar science and exploration since 2006 The Steering Committee is eternally grateful to all contributors and especially the chapter leads and to Professor Makiko Ohtake University of Aizu Japan and Dr David Blewett Johns Hopkins University Applied Physics Laboratory U S A for organizing the New Views of the Moon 2 Electronic Annex We deeply appreciate the hard work and dedication of everyone involved in the production of this volume especially Rachel Russell and Ian Swainson at the Mineralogical Society of America This volume helps to frame our knowledge and expectations for an exciting future of lunar science and exploration and the new discoveries to be made Having humans return to the Moon now seems more likely than it ever has since the last humans left the Moon on 14 December 1972 *Treatise on Geophysics, Volume 9* David Stevenson, 2010-05-18 Evolution of the Earth focuses on the formation of Earth Topics include the differentiation of the core mantle and crust the formation of the ocean basins and continents outgassing and volcanism the initiation of plate tectonics the origin and persistence of Earth's magnetic field the growth of the inner core changes in mantle convection through time and the impact of life on the planet The volume takes an interdisciplinary viewpoint that emphasizes the interplay of geophysics other aspects of earth science and biological evolution Some outstanding questions are identified and debated Self contained volume starts with an overview of the subject then explores each topic with in depth detail Extensive reference lists and cross references with other volumes to facilitate further research Full color figures and tables support the text and aid in understanding Content suited for both the expert and non expert **Radioactive Geochronometry** Heinrich D Holland, Karl K. Turekian, 2010-09-30 The history of Earth in the Solar System has been unraveled using natural radioactivity The sources of this radioactivity are the original creation of the elements and the subsequent bombardment of objects including Earth in the Solar System by cosmic rays Both radioactive and radiogenic nuclides are harnessed to arrive at ages of various events and processes on Earth This collection of chapters from the Treatise on Geochemistry displays the range of radioactive geochronometric studies that have

been addressed by researchers in various fields of Earth science These range from the age of Earth and the Solar System to the dating of the history of Earth that assists us in defining the major events in Earth history In addition the use of radioactive geochronometry in describing rates of Earth surface processes including the climate history recorded in ocean sediments and the patterns of circulation of the fluid Earth has extended the range of utility of radioactive isotopes as chronometric and tracer tools Comprehensive interdisciplinary and authoritative content selected by leading subject experts Robust illustrations figures and tables Affordably priced sampling of content from the full Treatise on Geochemistry

Treatise on Geochemistry, 2013-10-19 This extensively updated new edition of the widely acclaimed Treatise on Geochemistry has increased its coverage beyond the wide range of geochemical subject areas in the first edition with five new volumes which include the history of the atmosphere geochemistry of mineral deposits archaeology and anthropology organic geochemistry and analytical geochemistry In addition the original Volume 1 on Meteorites Comets and Planets was expanded into two separate volumes dealing with meteorites and planets respectively These additions increased the number of volumes in the Treatise from 9 to 15 with the index appendices volume remaining as the last volume Volume 16 Each of the original volumes was scrutinized by the appropriate volume editors with respect to necessary revisions as well as additions and deletions As a result 27% were republished without major changes 66% were revised and 126 new chapters were added In a many faceted field such as Geochemistry explaining and understanding how one sub field relates to another is key Instructors will find the complete overviews with extensive cross referencing useful additions to their course packs and students will benefit from the contextual organization of the subject matter Six new volumes added and 66% updated from 1st edition The Editors of this work have taken every measure to include the many suggestions received from readers and ensure comprehensiveness of coverage and added value in this 2nd edition The esteemed Board of Volume Editors and Editors in Chief worked cohesively to ensure a uniform and consistent approach to the content which is an amazing accomplishment for a 15 volume work 16 volumes including index volume

Earth-Moon Relationships Cesare Barbieri, Francesca Rampazzi, 2013-06-29 Sediments and sedimentary processes on the Moon and Earth are very different In the absence of water an atmosphere the magnetosphere and much less oxygen in its rocks the Moon has neither clay minerals nor carbonates and no Fe₃ Mechanical weathering by impacts is the principal process of sediment generation on the Moon on Earth chemical weathering predominates Whereas processes of sediment transport are principally ballistic on the Moon movement by air water and ice prevail on the Earth The radical differences between Earth and Moon sediments make them useful end members between which all sediments of all terrestrial planetary bodies are expected to lie The purpose of this paper is 1 to compare and contrast major characteristics of the origin transportation deposition and preservation of sediments especially dust in the Earth and the Moon and 2 to suggest how sediments of other rocky planetary bodies especially Mars may fit in between the sediments of the Earth and the Moon

System Kent C. Condie, 2011-08-11 Kent C Condie **Structure and Dynamics of the Earth's Interior 1** Julien Monteux, 2025-04-15 The silicate mantle and its dynamics have controlled the Earth's internal cooling for over four billion years. Today these dynamics are rather slow but this was not always the case shortly after the core-mantle separation this reservoir was significantly melted with dynamics like those of a magma ocean. Despite advances in analytical and numerical tools and a better understanding of the Earth's internal structure the Earth's mantle currently remains a mystery. *Structure and Dynamics of the Earth's Interior 1* presents the evolution of mantle dynamics throughout Earth's history from its formation to the present day. It examines the contributions of numerical modeling as well as the seismological, petrological and geochemical data used to constrain dynamic models. Finally the book analyzes the manifestations of mantle dynamics in terms of surface cooling, volcanism and coupling with the atmosphere.

Scientific and Technical Aerospace Reports, 1985 *Water Worlds in the Solar System* Antony Joseph, 2022-11-25 *Water Worlds in the Solar System* In Search of Habitable Environments and Life is a comprehensive reference on the formation, availability, habitability potential and astrobiological implications of water in the Solar System. The book provides understanding of the importance of water on Earth to elucidate potential water and biosignature sources on other bodies in the Solar System. It covers processes involved in the formation of Earth and its Moon, genesis of water on those bodies, events on early Earth and other processes that are applicable to celestial bodies in the Solar System, directly correlating data available on water on other bodies to over 15 Earth analogue sites. This book forms a comprehensive overview on water in the Solar System from formation to biosignature and habitability considerations. It is ideal for academics, researchers and students working in the field of planetary science, extraterrestrial water research and habitability potential. Presents a comprehensive reference on water in the Solar System, developing readers' understanding of the importance and occurrence of water on Earth and beyond, all from an oceanographer's perspective. Contrasts terrestrial analogues in relation to their roles in understanding and exploring ocean worlds and habitability. Includes numerous figures, illustrations, tables and videos to help readers better understand concepts covered.
