Origin Of The Human Species:

Origin of the Human Species Dennis Bonnette, 2021-11-08 This book evaluates the claims of scientific creationism versus materialistic evolution while examining other scenarios Consistently philosophical in methodology and perspective the book is radically interdisciplinary in content examining data and arguments drawn from natural science philosophy and theology This work challenges the limits of human knowledge regarding every major question touching on human origins The Origin of the Human Species Dylan Brown, 2005-01-01 **The Human Species** Armand de Quatrefages, 2025-09-21 Reprint of the original first published in 1883 The Antigonus publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage *The Human Species* Armand Quatrefages de Bréau (i.e. Jean Louis Armand de), 1890 **The Human Species** Armand de Quatrefages, 1879 The Origins of Human Society Peter Bogucki, 2000-01-04 The Origins of Human Society traces the development of human culture from its origins over 2 million years ago to the emergence of literate civilization In addition to a global coverage of prehistoric life the book pays specific attention to the origins and dispersal of anatomically modern humans the development of symbolic expression the transition from mobile foraging bands to sedentary households early agriculture and its consequences the emergence of social differentiation and hereditary ranking and the prehistoric roots of ancient states and empires The Blackwell History of the World Series The goal of this ambitious series is to provide an accessible source of knowledge about the entire human past for every curious person in every part of the world It will comprise some two dozen volumes of which some provide synoptic views of the history of particular regions while others consider the world as a whole during a particular period of time The volumes are narrative in form giving balanced attention to social and cultural history in the broadest sense as well as to institutional development and political change Each provides a systematic account of a very large subject but they are also both imaginative and interpretative The Series is intended to be accessible to the widest possible readership and the accessibility of its volumes is matched by the style of presentation and production The Secret Origin of the Human Species Elliott M. Hughes, 2010-01-01 Until Darwin, Science, Human Variety and the Origins of Race B Ricardo Brown, 2015-10-06 This work fills a gap in recent studies on the history of race and science Focusing on both the classification systems of human variety and the development of science as the arbiter of truth Brown looks at the rise of the emerging sciences of life and society biology and sociology as well as the debate surrounding slavery and abolition *Evolution of the Human Genome II* Naruya Saitou, 2021-05-27 This two volume set provides a general overview of the evolution of the human genome The first volume overviews the human genome with descriptions of important gene groups This second volume provides up to date concise yet ample knowledge on the genome evolution of modern humans It comprises twelve chapters divided into two parts discussing Non neutral Evolution on Human Genes Part I and Evolution of Modern Human Populations Part II The most significant feature of this book is the continent wise discussion

of modern human dispersal using human genomic data in Part II Recent results such as introgression of paleogenomes to modern humans new methods such as computer simulation of global human dispersals and new information on genes for humanness will be of particular interest to the readers Since the euchromatin regions of the human genome was sequenced in 2003 a huge number of research papers were published on modern human evolution for a variety of populations It is now time to summarize these achievements This book stands out as the most comprehensive book on the modern human evolution focusing on genomic points of view with a broad scope Primary target audiences are researchers and graduate students in evolutionary biology

The Emergence of Humans Patricia J. Ash, David J. Robinson, 2011-09-20 The Emergence of Humans is an accessible informative introduction to the scientific study of human evolution It takes the reader through time following the emergence of the modern human species *Homo sapiens* from primate roots Acknowledging the controversy surrounding the interpretation of the fossil record the authors present a balanced approach in an effort to do justice to different views Each chapter covers a significant time period of evolutionary history and includes relevant techniques from other disciplines that have applications to the field of human evolution Self assessment questions linked to learning outcomes are provided for each chapter together with further reading and reference to key sources in the primary literature The book will thus be effective both as a conventional textbook and for independent study Written by two authors with a wealth of teaching experience The Emergence of Humans will prove invaluable to students in the biological and natural sciences needing a clear balanced introduction to the study of human evolution

The Primate Origins of Human Nature Carel P. Van Schaik, 2016-01-22 The Primate Origins of Human Nature Volume 3 in The Foundations of Human Biology series blends several elements from evolutionary biology as applied to primate behavioral ecology and primate psychology classical physical anthropology and evolutionary psychology of humans However unlike similar books it strives to define the human species relative to our living and extinct relatives and thus highlights uniquely derived human features The book features a truly multi disciplinary multi theory and comparative species approach to subjects not usually presented in textbooks focused on humans such as the evolution of culture life history parenting and social organization

Evolution of the Human Diet Peter S. Ungar, 2007 We are interested in the evolution of hominin diets for several reasons. One is the fundamental concern over our present day eating habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others. Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth. The third and the reason why most paleoanthropologists are interested in this question is that a species' trophic level and feeding adaptations can have a strong effect on body size, locomotion, life history strategies, geographic range, habitat choice, and social behavior. Diet is key to understanding the ecology and evolution of our distant ancestors and their kin, the early hominins. A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today. This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors. Paleontologists, archaeologists, primatologists, nutritionists, and other researchers all contribute pieces to the puzzle. This volume has at its core four main sections: Reconstructed diets based on hominin fossils (tooth size, shape, structure, wear, and chemistry; mandibular biomechanics); Archaeological evidence of subsistence (stone tools and modified bones); Models of early hominin diets based on the diets of living primates (both human and non-human); paleoecology and energetics; Nutritional analyses and their implications for evolutionary medicine. New techniques for gleaned information from fossil teeth, bones, and stone tools; new theories stemming from studies of paleoecology and new models coming from analogy with modern humans and other primates all contribute to our understanding. When these approaches are brought together, they offer an impressive glimpse into the lives of our distant ancestors. The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns, the unknowns, and the unknowables of the evolution of hominin diets.
