Gnosticism Through the Prism of the Third Millennium Alexander Maistrovoy, 2018-04-27 In the epoch of the late antiquity Gnostic schools gave their own exhaustive answers for the eternal questions of humankind Who are we Where did we come from and why do we exist What gives rise to endless and inescapable evil and suffering Jorge Borges describes the Gnostic view of life that we are a careless or criminal blunder the fruit of engagement of the flawed deity and crude material Thus the Gnostic answers to these questions were radically different from those espoused by traditional religions of the time Gnosticism through the Prism of the Third Millennium explores this Gnostic view of life and how they viewed a material world as a distortion of celestial spheres and how in humanity they saw a being doomed to suffering yet carrying inside the spark of the supreme divine world Author Alexander Maistrovoy offers a history of Gnosticism and its confrontation with the church showing how despite the crash of Gnostic schools its teachings and its questions did not disappear Today we can make sense of Gnostic philosophy not through the prism of mysticism or mythology but from the point of view of rationalism scientific knowledge and historical experience And what we will discover is that Gnostic thought has meaning and relevancy today shedding light on fundamental questions about the universe ourselves and the divine

Beyond Mechanism Brian G. Henning, Adam Scarfe, 2013-02 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences

Evolution Dissected Fredric P. Nelson, 2003 Evolution Dissected separates biological evolution into distinct categories and examines the characteristics of each category The vast majority of scientific data concerning biological evolution refers to the alteration of existent and functional DNA and pertains to only one of the categories of evolution Each of the remaining categories of biological evolution encompasses a unique set of mechanisms for the origin of functionally new information within the DNA

molecule The complexity of the origin of this new information is many many orders of magnitude greater than the complexity of the alteration of existent information Two categories of biological evolution lack unique supporting scientific data and are found to be highly irrational scientific hypotheses As you work your way through the pages of Evolution Dissected you will discover what could be and what could not be the basis for biological evolutionary change Evolution Dissected is a must read for all high school and college students teachers and the scientific community **The Case for a Creator** Lee Strobel,2004 Charts Lee Strobel s personal journey from spiritual skepticism to a profound faith in God **Extraterrestrials** Ben Zuckerman,Michael H. Dembski,2016-04-15 For a thing to be real it must be able to communicate with other things If this is so then the problem of being receives a straightforward resolution to be is to be in communion So the fundamental science indeed the science that needs to underwrite all other sciences is a theory of communication Within such a theory of communication the proper object of study becomes not isolated particles but the information that passes

between entities In Being as Communion philosopher and mathematician William Dembski provides a non technical overview of his work on information Dembski attempts to make good on the promise of John Wheeler Paul Davies and others that information is poised to replace matter as the primary stuff of reality With profound implications for theology and metaphysics Being as Communion develops a relational ontology that is at once congenial to science and open to teleology in nature All those interested in the intersections of theology philosophy and science should read this book **The Design of Life** William A Dembski,Jonathan Wells,2008 The Design of Life written by two leading intelligent design theorists offers the clearest most comprehensive treatment of intelligent design on the market with answers to Darwinists objections drawn unrelentingly from the recent science literature **The Proterozoic Biosphere** J.
