Origins Of Fear The Origins Of Behavior:

Beyond the Dyad Michael Lewis, K. Takahashi, 2005-01-01 There is consensus among social scientists that human beings from infants to elderly people develop social relationships with multiple significant others. In fact, everyday observations of individuals reveal that even infants interact not only with their mother but also with a variety of significant others. However, the attachment theory which has dominated theories and empirical studies of social relationships has argued for a narrower framework. In this special issue, four theoretical papers each of which provides models of social interaction that go beyond the mother-child dyad are presented. They theoretically contrast the attachment with the mother to relationships with multiple significant others and show that models assessing multiple relationships to others are more predictive of subsequent social and emotional adjustment. Commentaries including attachment theorists and anthropologists to deepen the discussion are also presented. Researchers and students in developmental psychology, clinical psychology and psychiatry as well as teachers, nurses and parents interested in these discussions will find in this issue essential theories that go beyond the mother-child dyad.

Origins of Intelligence M. Lewis, 2013-11-11 A preface is an excellent opportunity for an editor to speak directly to the reader and share with him the goals, hopes, struggles and production of a volume such as this. It seems to me that I have an important obligation to tell you the origins of this volume. This is no idle chatter but rather an integral part of scientific inquiry. It is important before delving into content, theory and methodology to talk about motivation, values and goals. Indeed, it is always necessary to explicate from the very beginning of any intellectual and scientific inquiry the implicit assumptions governing that exercise. Failure to do so is not only an ethical but a scientific failure. We learn, albeit all too slowly, that science is a moral enterprise and that values must be explicitly stated, removing from the shadows those implicit beliefs that often motivate and determine our results. No better or more relevant example can be found than in the review of the implicit assumptions of the early IQ psychometricians in this country; see Kamin's book *The Science and Politics of IQ* 1975.

Behavior, Health, and Environmental Stress Sheldon Cohen, Gary W. Evans, Daniel Stokols, David S. Krantz, 2013-06-29 Eight years ago four psychologists with varying backgrounds but a common interest in the impact of environmental stress on behavior and health met to plan a study of the effects of aircraft noise on children The impetus for the study was an article in the Los Angeles Times about architectural interventions that were planned for several noise impacted schools under the air corridor of Los Angeles International Airport These interventions created an opportunity to study the same children during noise exposure and then later after the exposure had been attenuated The study was designed to test the generality of several noise effects that had been well established in laboratory experimental studies It focused on three areas the relationship between noise and personal control noise and attention and noise and cardiovascular response Two years later a second study designed to replicate and extend findings from the first was conducted

Death Anxiety and Religious Belief Jonathan Jong, Jamin Halberstadt, 2016-08-25 There are no atheists in foxholes or so we hear The thought that the fear of death motivates religious belief has been around since the earliest speculations about the origins of religion There are hints of this idea in the ancient world but the theory achieves prominence in the works of Enlightenment critics and Victorian theorists of religion and has been further developed by contemporary cognitive scientists Why do people believe in gods Because they fear death Yet despite the abiding appeal of this simple hypothesis there has not been a systematic attempt to evaluate its central claims

and the assumptions underlying them Do human beings fear death If so who fears death more religious or nonreligious people Do reminders of our mortality really motivate religious belief Do religious beliefs actually provide comfort against the inevitability of death In *Death Anxiety and Religious Belief* Jonathan Jong and Jamin Halberstadt begin to answer these questions drawing on the extensive literature on the psychology of death anxiety and religious belief from childhood to the point of death as well as their own experimental research on conscious and unconscious fear and faith In the course of their investigations they consider the history of ideas about religion s origins challenges of psychological measurement and the very nature of emotion and belief
