Foods of Plant Origin Michael E. Netzel,Yasmina Sultanbawa,2020-04-02 It is now well accepted that the consumption of plant based foods is beneficial to human health Fruits vegetables grains and derived products can be excellent sources of minerals vitamins and fiber and usually have a favorable nutrient to energy ratio Furthermore plant foods are also a rich source of phytochemicals such as polyphenols carotenoids and betalains with potential health benefits for humans Many epidemiological studies have made a direct link between the consumption of plant foods and health Human intervention studies have also shown that higher intake consumption of plant foods can reduce the incidence of metabolic syndrome and other chronic diseases especially in at risk populations such as obese people In addition to its health benefits plant foods are also used as functional ingredients in food applications such as antioxidants antimicrobials and natural colorants The Special Issue Foods of Plant Origin covers biodiscovery functionality the effect of different cooking preparation methods on bioactive plant food ingredients and strategies to improve the nutritional quality of plant foods by adding other food components using novel alternative food sources or applying non conventional preparation techniques

Authenticity of Foods of Plant Origin Konstantinos Kotsanopoulos,2022-06-15 Food is adulterated to increase profit or due to negligence Adulteration can compromise food safety and quality and harm consumers This may undermine consumer trust and the reputation of the food industry As such it is very important to monitor control and detect adulteration A number of techniques have been developed for the authentication of food and verifying its quality and

associated claims Foods of plant origin are the source of nutrients for billions of people around the globe Due to the huge variety of plants and the lack of visual characteristics as a result of processing advanced techniques are required to detect adulteration This book reviews the latest developments in the field of authenticity of foods of plant origin examining concepts such as traceability and how they are applied to facilitate the support of claims as well as legislative requirements in the major economies around the world The basic techniques used nowadays in verifying authenticity of these types of foods are reviewed and discussed and their applications are summarized The book also focuses on categories of foods most prone to adulteration attempts due to their characteristics properties and production methods commonly followed thus allowing the reader to more easily identify the chapter that is of interest in each case The book will be of interest to food industrialists chemists quality control scientists and technologists microbiologists analytical chemists and food physical chemists within the food industry It is also aimed at academicians who are interested in the authenticity of foods of plant origin and the advancements in the analytical fields that support relevant legal and marketing requirements Chemometrics and Authenticity of Foods of Plant Origin Sofia Agriopoulou, Maria Tarapoulouzi, Theodoros Varzakas, 2022-12-22 One of the challenges facing the world is feeding the ever increasing population with food security being a growing 21st century problem This stresses the need for coordinated international systems to prevent and mitigate food fraud in global food supply chains Food fraud which is usually financially motivated has significant consequences including unfair competition major damage to markets and organizations loss of consumer confidence and it raises food safety issues A shift toward a more plant based diet can be endorsed to promote sustainability but also to improve public health and minimize animal suffering The aim of this book is to deal with issues related to authenticity and chemometrics of the most important food products of plant origin such as cereals nuts legumes table olives and olive oil coffee tea fruits and vegetables fruit juices spices mushrooms beers and wines and honey using state of the art analytical techniques and instrumentation coupled with available chemometric tools Foods of Plant Origin D.K. Salunkhe, S.S. Deshpande, 2012-12-06 The present world population of about five billion and its projected growth create enormous pressures and demands for food and industrial raw materials It is to crop plants one of our precious few renewable resources that we must look to meet most of these needs Globally about 88% of our caloric requirements and 90% of our protein ultimately derive from plant sources ample evidence of their importance to humankind Our survival will therefore continue to depend on the world's largest and certainly most important industry agriculture Yet in spite of our long history of domestication and civilization the number of crop species involved in sustaining human life is strictly limited Essentially some twenty four crops protect us from starvation To know these basic food crop plants to study how they function and how their productivity may be improved is the first step in solving the world food problem The primary objectives in writing this book were to address this challenge and to review comprehensively the wealth of available yet scattered information on food crop productivity and processing Unlike several other texts and

monographs in this field the present work was intended to give in a single volume a quick informative view of the various problems from field to table concerning the major food crops worldwide
