## Origins Of Humankind:

*The Origin Of Humankind* Richard Leakey, 2008-08-05 The name Leakey is synonymous with the study of human origins wrote The New York Times The renowned family of paleontologists Louis Leakey Mary Leakey and their son Richard Leakey has vastly expanded our understanding of human evolution The Origin of Humankind is Richard Leakey's personal view of the development of Homo Sapiens At the heart of his new picture of evolution is the introduction of a heretical notion once the first apes walked upright the evolution of modern humans became possible and perhaps inevitable From this one evolutionary step comes all the other evolutionary refinements and distinctions that set the human race apart from the apes In fascinating sections on how and why modern humans developed a social organization culture and personal behavior Leakey has much of interest to say about the development of art language and human consciousness *The Origins of Humankind* Stephen Tompkins, 1998-07-23 The text starts explaining the theory of evolution and further chapters discuss the human journey **The First Humans** Göran Burenhult, 1993 Examines theories of evolution the Great Apes the origins of language extinct species and the global expansion that precipitated adaptation and diversity Sapiens [Tenth Anniversary Edition] Yuval Noah Harari, 2025-02-18 New York Times Readers Pick Top 100 Books of the 21st Century The tenth anniversary edition of the internationally bestselling phenomenon that cemented Yuval Noah Harari as one of the most prominent historians of our time featuring a new afterword from the author One hundred thousand years ago at least six human species inhabited the earth Today there is just one Us Homo sapiens How did our species succeed in the battle for dominance Why did our foraging ancestors come together to create cities and kingdoms How did we come to believe in gods nations and human rights to trust money banks and laws and to be enslaved by bureaucracy timetables and consumerism And what will our world be like in the millennia to come In Sapiens Professor Yuval Noah Harari spans the whole of human history from the very first humans to walk the earth to the radical and sometimes devastating breakthroughs of the Cognitive Agricultural and Scientific Revolutions Drawing on insights from biology anthropology paleontology and economics and incorporating full color illustrations throughout the text he explores how the currents of history have shaped our human societies the animals and plants around us and even our personalities Can we ever free our behavior from the legacy of our ancestors And what if anything can we do to influence the course of the centuries to come Bold wide ranging and provocative Sapiens integrates history and science to challenge everything we thought we knew about being human our thoughts our actions our heritage and our future **Evolution** Raymond Hawkey, 1987-09-01 Devised by an award winning designer and a team of experts from the British Museum of Natural History here is the story of humankind in a breathtaking series of three dimensional pop up illustrations Full color illustrations Born in Africa Martin Meredith, 2012-05-08 Africa does not give up its secrets easily Buried there lie answers about the origins of humankind And yet though vital clues still remain hidden scientists have over the last century transformed our understanding about the beginnings of human life In Born in Africa

Martin Meredith follows scientists trail of discoveries about human origins recounting their intense rivalry personal feuds and fierce controversies as well as their feats of skill and endurance And he limns their momentous accomplishments Scientists have identified more than twenty species of extinct humans They have firmly established Africa as the birthplace not only of humankind but also of modern humans They have revealed how early technology language ability and artistic endeavour all originated in Africa and they have shown how small groups of Africans spread out from Africa in an exodus sixty thousand years ago to populate the rest of the world

**Evolution** Raymond Hawkey,1987 Animated three dimensional illustrations present the evolution of mankind from the earliest animal in the earliest days of life on Earth History of Humanity UNESCO,2008-12-31 This is the seventh and final volume in this comprehensive guide to the history of world cultures throughout historical times

**The Leakeys** Margaret Poynter,2001-07 Louis and Mary Leakey were pioneers in the study of human origins Their discoveries of ancient skulls and pre human footprint trails have given us a greater understanding of how the human race evolved Their son Richard has also contributed to our understanding of human origins with his discoveries of the skeletons of prehistoric humans This story will captivate and inspire your readers People of the Past Göran Burenhult,2004 This book tells the human story from the origins of humankind to the end of the Stone Age around 2000 BC It explores our links with other primates and examines theories of evolution the beginnings of language the rise of art and religion and the global expansion that precipitated remarkable adaption and diversity Then follows a survey of the revolutionary upheaval associated with the development of agriculture a story of dramatic climate change the domestication of plants and animals massive population increase the founding of urban centres and long distance trade networks This momemtous transition is followed from Europe to the highlands of New Guinea and lowland Maya farmers from Africa to Asia and the New World

**Fossil Men** Kermit Pattison,2020-11-10 Riveting Pattison s uncanny ability is to write evocatively about science In this he is every bit as good as the best scientist writers New York Times Book Review Editors Choice Brilliant A work of staggering depth Minneapolis Star Tribune A decade in the making Fossil Men is a scientific detective story played out in anatomy and the natural history of the human body the first full length account of the discovery of a startlingly unpredicted human ancestor more than a million years older than Lucy It is the ultimate mystery where do we come from In 1994 a team led by fossil hunting legend Tim White uncovered a set of ancient bones in Ethiopia s Afar region Radiometric dating of nearby rocks indicated the resulting skeleton classified as *Ardipithecus ramidus* nicknamed Ardi was an astounding 4 4 million years old more than a million years older than the world famous Lucy The team spent the next 15 years studying the bones in strict secrecy all while continuing to rack up landmark fossil discoveries in the field and becoming increasingly ensnared in bitter disputes with scientific peers and Ethiopian bureaucrats When finally revealed to the public Ardi stunned scientists around the world and challenged a half century of orthodoxy about human evolution how we started walking upright how we evolved our nimble hands and most significantly whether we were descended from an

ancestor that resembled today's chimpanzee. But the discovery of Ardi wasn't just a leap forward in understanding the roots of humanity; it was an attack on scientific convention and the leading authorities of human origins triggering an epic feud about the oldest family skeleton. In *Fossil Men*, acclaimed journalist Kermit Pattison brings us a cast of eccentric obsessive scientists including White, an uncompromising perfectionist whose virtuoso skills in the field were matched only by his propensity for making enemies; Gen Suwa, a Japanese savant whose deep expertise about teeth rivaled anyone on Earth; Owen Lovejoy, a onetime creationist turned paleoanthropologist with radical insights into human locomotion; Berhane Asfaw, who survived imprisonment and torture to become Ethiopia's most senior paleoanthropologist; Don Johanson, the discoverer of Lucy, who had a rancorous falling out with the Ardi team; and the Leakeys, for decades the most famous family in paleoanthropology. Based on a half decade of research in Africa, Europe, and North America, *Fossil Men* is not only a brilliant investigation into the origins of the human lineage but also the oldest of human emotions: curiosity, jealousy, perseverance, and wonder.

**Origins of Humankind Articles: General Topics**, Features articles on general topics presented on the Origins of Humankind site. Includes: Selective Brain Cooling in Early Hominids, One Less Missing Link, Rewriting the Book on Human Evolution, On Its Own Two Feet, and The Origins of Our Species. **The Origins of Life**, Anna-Teresa

Tymieniecka, 2012-12-06. Understanding life through its origins reveals the groundwork underlying the differentiations of its autonomous generative matrixes. Following the primogenital matrix of generation, the three generative matrixes of the specifically human sense of life establish humanness within the creative human condition as the existential sphere of sharing in life.

**Our Occulted History**, Jim Marrs, 2013-02-12. The author of *Alien Agenda* illustrates how human civilization may have originated with non-humans who visited Earth eons ago and may still be here. For years we've been taught that human progress has been a long, slow climb from the primordial ooze to hunter-gatherers to empires. But what if that's only part of the story? Bestselling author and legendary conspiracy researcher Jim Marrs, who has investigated the recent financial crisis, the JFK assassination, and the national socialist takeover of America, now takes on his biggest subject: the history of mankind. *Our Occulted History* overturns conventional knowledge and beliefs, presenting compelling evidence that the Earth once hosted prehistoric civilizations using technologies that very well may have surpassed our own. Sound unbelievable? Just a few hundred years ago so was the concept that the Earth revolved around the sun. Marrs sifts through the historical scientific and cultural record, showing how numerous ancient texts and tablets tell of visitors from the stars colonizing the Earth. From the flying vimanas of the Hindu Vedic literature and the flying shields reported by the Romans to the mysterious airships of the 1800s and the UFOs of today, he argues that someone other than us is still present on this planet. But are these visitors simply observers, or do they play a much more active and controlling role? Jim Marrs raises this shocking question and more in the provocative and persuasive *Our Occulted History*. The truth is out there and in here. *Ideas in History Vol. 6:1*, Ben

Dorfman, 2013-04-02. This issue of *Ideas in History* marks our continuing attempt to internationalize the journal at the same

time that we publish scholarship of pressing international interest from scholars based in Scandinavia Ideas in History 6 no 1 is an open issue though its pieces lay emphasis on the late nineteenth and twentieth centuries The articles in this issue emphasize intersections between culture morality and politics Mikkel Thorup investigates genealogies of radical terrorist philosophy and practice Ben Dorfman looks into plays of historical thought in human rights and the problem of alienation in both human rights and philosophy of history Benjamin C Sax regrounds Nietzschean concepts of the Will to Power and Will to Truth via new understandings of Nietzschean genealogy and Elisabeth Stubb takes on problems of nation building in Finland and the role of intellectuals in the creation of world opinion We hope our readers find Ideas in History 6 no 1 enriching **A**
