## Origins Of Genius:

*Origins of Genius* Dean Keith Simonton, 1999-07-08 How can we account for the sudden appearance of such dazzling artists and scientists as Mozart Shakespeare Darwin or Einstein How can we define such genius What conditions or personality traits seem to produce exceptionally creative people Is the association between genius and madness really just a myth These and many other questions are brilliantly illuminated in *The Origins of Genius* Dean Simonton convincingly argues that creativity can best be understood as a Darwinian process of variation and selection The artist or scientist generates a wealth of ideas and then subjects these ideas to aesthetic or scientific judgment selecting only those that have the best chance to survive and reproduce Indeed the true test of genius is the ability to bequeath an impressive and influential body of work to future generations Simonton draws on the latest research into creativity and explores such topics as the personality type of the genius whether genius is genetic or produced by environment and education the links between genius and mental illness Darwin himself was emotionally and mentally unwell the high incidence of childhood trauma especially loss of a parent amongst Nobel Prize winners the importance of unconscious incubation in creative problem solving and much more Simonton substantiates his theory by examining and quoting from the work of such eminent figures as Henri Poincare W H Auden Albert Einstein Marie Curie Charles Darwin Niels Bohr and many others For anyone intrigued by the spectacular feats of the human mind *The Origins of Genius* offers a revolutionary new way of understanding the very nature of creativity

*Art, Origins, Otherness* William Desmond, 2012-02-01 Though our time is often said to be post religious and post metaphysical many continue to seek some encounter with otherness and transcendence in art This book deals diversely with the issues of art origins and otherness both in themselves and in philosophical engagements with the works of Plato Kant Hegel Schopenhauer Nietzsche and Heidegger Addressing themes such as eros and mania genius and the sublime transcendence and the saving power of art William Desmond tries to make sense of the paradox that too much has been asked of art that now almost nothing is asked of it He argues that there is more to be said philosophically of art and claims that art has the power to open up mindfulness beyond objectifying knowledge as well as beyond thinking that claims to be entirely self determining

*The Idea of Creativity* Michael Krausz, Denis Dutton, Karen Bardsley, 2009 Seventeen philosophers scientists and artists consider questions about the intriguing idea of creativity Is creativity essentially mysterious Is creativity essentially inspirational or rationalistic What role does skill play in creativity What are the criteria of creativity Should we assign logical priority to creative persons creative processes or creative products How do forms of creativity relate to different domains of human activity How does creativity relate to self transformation How does our knowledge of the circumstances of creativity effect our appreciation of its products Can a recipient of a creative work also be a creator of it Contributors include Margaret Boden Larry Briskman John M Carvalho David Davies Berys Gaut Rom Harré Carl R Hausman Albert Hofstadter Arthur Koestler Michael Krausz Peter Lamarque Thomas Leddy Paisley Livingston Michael
