**Diseases and Their Management** N.R. Galloway,2013-11-11 This book is intended for the medical student and non specialist postgraduate It is being published at a time when hospital waiting lists for eye care in Great Britain have reached record levels and the need for more teaching at medical student level is becoming imperative In many medical schools the students have very little exposure to the specialty some students none at all This may be because in past years the emphasis has been on teaching ophthalmology at a postgraduate level and a considerable development of postgraduate teaching has occurred It had been inferred that more exposure of qualified general practitioners to the subject would reduce the hospital waiting lists since more eye care would take place in general practice It would appear that the reverse has taken place general practitioners being now more aware of eye problems send even more cases to the hospitals In the absence of an expansion of the hospital service there is an urgent need to improve primary care ophthalmology and this can best be done by placing more emphasis on the teaching of medical students It is against this background that the need to provide a new basic textbook in ophthalmology arises The book is therefore aimed primarily at the medical student It does however aim to make preliminary reading for the postgraduate student      **Current Catalog** National Library of Medicine (U.S.),1993 First multi year cumulation covers six years 1965 70      **The Eye in Pediatric Systemic Disease** Alex V.
