Twentieth-Century Building Materials Thomas C. Jester, 2014-08-01 Over the concluding decades of the twentieth century the historic preservation community increasingly turned its attention to modern buildings including bungalows from the 1930s, gas stations and diners from the 1940s, and office buildings and architectural homes from the 1950s. Conservation efforts, however, were often hampered by a lack of technical information about the products used in these structures and to fill this gap *Twentieth Century Building Materials* was developed by the U.S. Department of the Interior's National Park Service and first published in 1995. Now this invaluable guide is being reissued with a new preface by the book's original editor. With more than 250 illustrations, including a full color photographic essay, the volume remains an indispensable reference on the history and conservation of modern building materials. Thirty-seven essays written by leading experts offer insights into the history, manufacturing processes, and uses of a wide range of materials including glass block, aluminum, plywood, linoleum, and gypsum board. Readers will also learn about how these materials perform over time and discover valuable conservation and repair techniques. Bibliographies and sources for further research complete the volume. The book is intended for a wide range of conservation professionals including architects, engineers, conservators, and material scientists engaged in the conservation of modern buildings as well as scholars in related disciplines. **Extruding Plastics** D.V.

Rosato, 2013-11-27 Worldwide extrusion lines successfully process more plastics into products than other processes by consuming at least 36 wt% of all plastics. They continue to find practical solutions for new products and/or problems to meet new product performances. This book, with its practical industry reviews, is a unique handbook, the first of its kind that covers over a thousand of the potential combinations of basic variables or problems with solutions that can occur from upstream to downstream equipment. Guidelines are provided for maximizing processing efficiency and operating at the lowest possible cost. It has been prepared with an awareness that its usefulness will depend greatly upon its simplicity and provision of essential information. It should be useful to: 0 those already extruding and desiring to obtain additional information for their line and/or provide a means of reviewing other lines that can provide their line with operating improvements; 2 those processing or extruding plastics for the first time; 3 those considering going into another extrusion process; 4 those desiring additional information about employing the design of various products more efficiently with respect to both performance and cost; 5 those contemplating entering the business of extrusion; 6 those in new venture groups, materials development, and/or market development; 7 those in disciplines such as nonplastics manufacturers, engineers, designers, quality control, financial, and management; and 8 those requiring a textbook on extrusion in trade schools and high schools or colleges. *Plastics*
