dimensions in Interstellar to life as a mental projection in The Matrix But these imaginings seem downright tame compared with the mind bending science now coming out of physics and astronomy and in this eBook Physics New Frontiers we look at the strange and fascinating discoveries shaping and reshaping the field today In the world of astrophysics the weirdness begins at the moment of creation In The Black Hole at the Beginning of Time the authors discuss theories of what might have come before the big bang Could our 3 D universe have sprung from the formation of a black hole in a 4 D cosmos The math says maybe Later in The Giant Bubbles of the Milky Way the authors describe massive structures dubbed Fermi bubbles at its center structures that no one noticed until recently Technological innovations make much of this new science possible as we see again in Neutrinos at the Ends of the Earth where 5 000 odd sensors frozen deep within a cubic kilometer of ice in Antarctica aim to catch neutrinos in order to study distant cosmic phenomena Scientists are also dissecting molecules with the most powerful x ray laser in the world as explored in The Ultimate X ray Machine Even our most fundamental notions of what reality is are up for debate as examined in Does the Multiverse Really Exist and the aptly named What Is Real in which the authors question whether particles are indeed material things at all While all of this abstraction might seem like a fun exercise in mental gymnastics living things must also abide by the laws of physics which according to The Limits of Intelligence may prevent our brains from evolving further Then again as we've learned things could be different than they appear

A Question of Time Scientific American Editors, 2012-11-30 A Question of Time The Ultimate Paradox by the Editors of Scientific American What time is it That simple question is probably asked more often in contemporary society than ever before In our clock studded world the answer is never more than a glance away and so we can blissfully partition our days into ever smaller increments for ever more tightly scheduled tasks Modern scientific revelations about time however make the question endlessly frustrating If we seek a precise knowledge of the time the infinitesimal flash of now dissolves into a scattering flock of nanoseconds Because we are bound by the speed of light and the velocity of nerve impulses our perception of the present reflects the world as it occurred an instant ago for all that human consciousness pretends otherwise we can never catch up Even in principle perfect synchronicity escapes us Relativity dictates that like a strange syrup time flows slower on moving trains than in the stations and faster in the mountains than in the valleys The time for our wristwatch is not exactly the same as the time for our head This eBook A Question of Time summarizes what science has discovered about how time permeates and guides both our physical world and our inner selves That knowledge should enrich the imagination and provide practical advantages to anyone hoping to beat the clock or at least to stay in step with it Synchronize your watches

In Motion: 10 Fun Experiments Exploring Forces Scientific American Editors, 2023-07-30 What are forces These are the pushes and pulls on something that come from the world around them Gravity friction lift and drag are all forces explored in this title presented by Scientific American Young scientists have a chance to test centripetal force using marbles make a paper rocket and examine how a hovercraft hovers among other questions and ideas in
