Neuroinformatics Stephen H. Koslow, Michael F. Huerta, 2013-03-07 Modern neuroscience is providing profound insights into nature's most mysterious puzzle the human brain while applications of information and computer science are transforming the way people interact with each other and with the world around them The new science of neuroinformatics which sits at the junction integrates knowledge and promises to catalyze progress in these dynamic and seemingly disparate areas of study Neuroinformatics research will allow brain and behavioral scientists to make better sense and use of their data through advanced information tools and approaches These include new ways to acquire store visualize analyze integrate synthesize and share data as well as the means for electronic scientific collaboration In this country the principal source of support for neuroinformatics research is the Human Brain Project The project which is led by the National Institute of Mental Health now supports neuroinformatics research performed by over 60 scientists This volume presents the findings of the first group of researchers Their efforts will begin to arm the next generation of brain and behavioral scientists with tools to attack the serious problem of information overload and ultimately relate their findings to those obtained from different species levels of biological organization methods and laboratories And the challenges presented by the amount diversity and complexity of brain and behavioral data will give informatics researchers the impetus to test and expand the limits of their own science The work described in this volume signals a change in the way scientists interact with data instruments and each other and points the way to a very different and richer future understanding of the human brain and mind **Policy**

progress in agricultural technology development has remained persistently blind to social and gender inequalities Creating
agricultural research ecosystems and institutions that address gender inequality requires structural and systemic analysis
One of the major areas of investment in agricultural innovation is plant breeding Integrating social welfare objectives in plant
breeding is a good starting point to catalyze progress towards gender equality objectives in research for development at a
global scale yet devoid of structural change these efforts risk falling short of expectations Intentionally addressing gender in
plant breeding research can reshape the technical options goals and intended impact of breeding programs Improving the
benefits delivered to rural women through plant breeding can be achieved through new methods and learning critically
analyzing systematic barriers to equitable plant breeding research and documenting experiences that demonstrate positive
change There is a wide diversity of global experiences where gender research has analyzed how gender differences influence
needs preferences and potential benefits from crop varieties and crop specific traits Some of these experiences were able to
successfully integrate results and learning from gender research into breeding processes and decisions while some have
failed to demonstrate concrete actionable results in breeding programs *Information Quality in e-Health* Andreas

Viewpoint-based Flexible Information System Architectures Dmitri Valeri Panfilenko,2021-06-07

Information system architecture ISA specification as a part of software engineering field has been an information systems research topic since the 60 s of the 20th century There have been manifold specification methodologies over the recent decades developed newly or adapted in order to target the domains of software modelling legacy systems steel production and automotive safety Still there exist considerable issues constituting the need for a flexible ISA development e g incomplete methodology for requirements in model driven architectures lacking qualitative methods for thorough definition and usage of viewpoints Currently existing methods for information system architecture specification usually devise the target architectures either addressing only a part of software life cycles or neglecting less structured information The method for flexible information system architectures FISA specification uses the viewpoint concept for mediating the domain expert and technical system levels The FISA method defines construction and application reference models based on the ANSI IEEE Standard 1471 2000 viewpoints with model transformations based on OMG Standard Model Driven Architecture MDA and four different approaches for ISA specification thus providing for flexibility both in construction and refactoring procedures The development of FISA method has been based on a thorough analysis of the ISA specification method field and constructs a comprehensive procedure and reference engineering models for flexible ISA specification The genericity of the conceived construction and application procedure models of FISA allows for its usage not only in research but also in industry settings as presented on illustrative scenarios in steel manufacturing and automotive safety
