World Cities, City Worlds William Solesbury, 2018-12-17 When living and working in cities we need to make sense of them in order to get by. We must delve below their surface to understand what makes them tick and how we can best engage with them. This book argues that three tropes can help us namely metaphors icons and perspectives. Metaphorically we can see the city as a community a battleground a marketplace a machine or an organism. Some cities are iconic they present us with characteristics that are more generally true of cities and city life such as Venice Mumbai New York Tokyo Paris and Los Angeles. Cities can also be viewed from different perspectives those of artists analysts rulers and citizens. This book explores these ways of understanding cities drawing on rich accounts of cities across the world and through time.

How To Think About Cities Deborah G. Martin, Joseph Pierce, 2022-11-29 Cities are raucous cacophonous and complex. Many dimensions of life play out and conflict across cities intricate landscapes be they political cultural economic or social. Urban policy makers and analysts often attempt to cut through the noise of

urban disagreement by emphasizing a dominant lens for understanding the key central logic of the city *How To Think About Cities* sees this tendency to selective vision as misleading and ultimately unjust cities are many things at once to different people and communities This book describes the various ways of seeing the functions and landscapes of the city as place frames and the constant process of negotiating which place frames best explain the city as place making Martin and Pierce call for an explicitly hybrid perspective that shifts between many different frames for making sense of cities This approach highlights how any given stance opens up some lines of inquiry and understanding while closing off others Thinking of cities as sites of contested perspectives promotes a synthetic approach to urban analysis that emphasizes difference and political possibility This mosaic view of the city will be a welcome read for those within urban studies geography and social sciences exploring the many faces of urban life

The New Science of Cities Michael Batty, 2017-07-28 A proposal for a new way to understand cities and their design not as artifacts but as systems composed of flows and networks In *The New Science of Cities* Michael Batty suggests that to understand cities we must view them not simply as places in space but as systems of networks and flows To understand space he argues we must understand flows and to understand flows we must understand networks the relations between objects that compose the system of the city Drawing on the complexity sciences social physics urban economics transportation theory regional science and urban geography and building on his own previous work Batty introduces theories and methods that reveal the deep structure of how cities function Batty presents the foundations of a new science of cities defining flows and their networks and introducing tools that can be applied to understanding different aspects of city structure He examines the size of cities their internal order the transport routes that define them and the locations that fix these networks He introduces methods of simulation that range from simple stochastic models to bottom up evolutionary models to aggregate land use transportation models Then using largely the same tools he presents design and decision making models that predict interactions and flows in future cities These networks emphasize a notion with relevance for future research and planning that design of cities is collective action
