Male Call:

Male Call Jonathan Auerbach, 1996 When Jack London died in 1916 at age forty he was one of the most famous writers of his time Eighty years later he remains one of the most widely read American authors in the world The first major critical study of London to appear in a decade *Male Call* analyzes the nature of his appeal by closely examining how the struggling young writer sought to promote himself in his early work as a sympathetic romantic man of letters whose charismatic masculinity could carry more significance than his words themselves Jonathan Auerbach shows that London's personal identity was not a basis of his literary success but rather a consequence of it Unlike previous studies of London that are driven by the author's biography *Male Call* examines how London carefully invented a trademark self in order to gain access to a rapidly expanding popular magazine and book market that craved authenticity celebrity power and personality Auerbach demonstrates that only one fact of London's life truly shaped his art his passionate desire to become a successful author Whether imagining himself in stories and novels as a white man on trail in the Yukon a sled dog a tramp or a professor or engaging questions of manhood and mastery in terms of work race politics class or sexuality London created a public persona for the purpose of exploiting the conventions of the publishing world and marketplace Revising critical commonplaces about both Jack London's work and the meaning of nature within literary naturalism and turn of the century ideologies of masculinity Auerbach's analysis intriguingly complicates our view of London and sheds light on our own postmodern preoccupation with celebrity *Male Call* will attract readers with an interest in American studies American literature gender studies and cultural studies

Special Scientific Report--wildlife, 1969 **Encyclopedia of Entomology** John L. Capinera, 2008-08-11 This text brings together fundamental information on insect taxa morphology ecology behavior physiology and genetics Close relatives of insects such as spiders and mites are included

The North American Quails, Partridges, and Pheasants Paul Johnsgard, 2017-10-10 This book documents the biology of six species of New World quails that are native to North America north of Mexico mountain scaled Gambel's California and Montezuma quails and the northern bobwhite three introduced Old World partridges chukar Himalayan snowcock and gray partridge and the introduced common ring necked pheasant Collectively quails partridges and pheasants range throughout all of the continental United States and the Canadian provinces Two of the species the northern bobwhite and ring necked pheasant are the most economically important of all North American upland game birds All of the species are hunted extensively for sport and are highly popular with naturalists birders and other outdoor enthusiasts

Duetting and Turn-Taking Patterns of Singing Mammals: From Genes to Vocal Plasticity, and Beyond Patrice Adret, Dena Jane Clink, Charles T. Snowdon, Sofya Dolotovskaya, 2023-10-23 Mammalian vocal duets and turn taking exchanges long coordinated acoustic signals exchanged between two individuals are primarily found in family living pair bonded mammals with a socially monogamous lifestyle some rodents some lemurs tarsiers titi monkeys a Mentawai langur gibbons and siamangs Duetting and turn taking patterns

combine visual chemical tactile and auditory cues to produce some of the most exuberant displays in the realm of animal communication How and why such phenotypes evolved independently across main lineages are fundamental questions at the core of the nature nurture debate Duetting styles ranging from antiphonal non overlapping to simultaneous overlapping emissions have now been documented in various taxa some of which are quite reminiscent of turn taking rules in human conversation Nonetheless much remains to be learned about this complex motor skill and at all four levels of analysis namely 1 developmental processes 2 causal mechanisms 3 functional properties and 4 evolutionary history Given the strong link between this form of coordinated singing and pair bonding gaining a deeper understanding of this kind of cooperative behavior will likely shed more light on the deep evolutionary roots of human culture language and music **Animal**

Communication Networks P. K. McGregor, 2005-03-31 Most animal communication has evolved and now takes place in the context of a communication network i e several signallers and receivers within communication range of each other This idea follows naturally from the observation that many signals travel further than the average spacing between animals This is self evidently true for long range signals but at a high density the same is true for short range signals e g begging calls of nestling birds This book provides a current summary of research on communication networks and appraises future prospects It combines information from studies of several taxonomic groups insects to people via fiddler crabs fish frogs birds and mammals and several signalling modalities visual acoustic and chemical signals It also specifically addresses the many areas of interface between communication networks and other disciplines from the evolution of human charitable behaviour to the psychophysics of signal perception via social behaviour physiology and mathematical models **Nocturnal Malagasy**

primates P. Charles-Dominique, 2012-12-02 Nocturnal Malagasy Primates Ecology Physiology and Behavior is composed of different studies investigating the strategies adopted by lesser known nocturnal species of Marosalaza forest to cope with the contrasted seasonal conditions In general it defines the relationship between ecology and physiology of these species The book is divided into two parts The first part is comprised of five chapters detailing field studies conducted during the seven successive and overlapping field trips from November 1973 to July 1974 This part is focused on dietary adaptations growth and reproductive cycles activity rhythms social structures and interspecific competition in five sympatric prosimian species The second part is also comprised of five chapters but describes the laboratory studies conducted at Brunoy in simulated climatic conditions It centers on the relationships and comparisons between species of annual variations in feeding body weight activity and reproduction with supplementary investigations of social interactions marking and learning abilities Altogether the field and laboratory studies presented in this book constitute a comprehensive approach to elucidate the problem of ecophysiology **The Eagle Owl** Vincenzo Penteriani, María del Mar Delgado, 2019-06-27 SHORTLISTED FOR

THE 2021 TWS WILDLIFE PUBLICATION AWARDS The definitive work on Europe's largest and most spectacular owl The Eagle Owl is one of the largest owls in the world and is considered the most eclectic in terms of habitat nest site and diet An

undisputed top predator it can prey on a range of mammals up to the size of a fox and almost every species of bird reptile amphibian and fish as well as a wide spectrum of invertebrates Surprisingly this owl can breed almost anywhere the female laying her eggs on a variety of natural and artificial structures over an array of altitudes Despite being so adaptable however it is still a vulnerable species and has suffered widely from persecution as well as other threats including electrocution on power lines decreasing prey availability the effects of pesticides and pollutants and habitat alteration Vincenzo Penteriani and Mar a del Mar Delgado have studied this fascinating bird extensively across its vast Eurasian range In this book they detail its intriguing ecology covering distribution foraging and breeding behaviour interspecific interactions dispersal and conservation issues The final two chapters provide a remarkable insight into vocal and visual communication Scientists have long believed that owls and other crepuscular and nocturnal birds forgo the visual signals found in other avian species but recent research on the Eagle Owl has suggested otherwise Bringing together more than 30 years of research The Eagle Owl tells a story rich in detail of one of the most thrilling and magnificent birds in the world

The Differences Between the Sexes R. V. Short, Evan Balaban, 1994-08-04 In most animals from bees to bison house flies to humans it is possible to see at a glance whether an individual is male or female How and why have these differences in appearance and behaviour developed and what are the nature and extent of the differences between men and women This book reviews the latest molecular genetic hormonal anatomical and behavioural data in a wide range of species in a series of lively and highly readable articles from the world s leading experts in this field Such an overview has never before been attempted It will have

a wide appeal especially to undergraduates and graduates in the biological and medical sciences and will help to bridge the gap between those who study genes and molecules in the laboratory and those who study the behaviour of animals in the wild Advances in the Study of Behavior H. Jane Brockmann, Peter J.B. Slater, Charles T. Snowdon, Timothy J. Roper, Marc Naguib, Katherine E. Multimodal Mating Signals: Evolution, Genetics and Physiological Background Astrid T. Groot, Varvara Yu. Vedenina, 2021-02-17 Comparative Hearing: Fish and Amphibians Richard R. Fay, 2012-12-06 A major goal of hearing research is to explain how the human auditory system normally functions and to help identify the causes of and treatments for hearing impairment Experimental approaches to this research make use of animal models that are developed evaluated and validated to determine what can be generalized from one species to another By investigating the structures physiological functions and hearing capabilities of various species comparative hearing research establishes the biological and evolutionary context for such models This volume brings together our current understanding of the auditory systems of two of the major vertebrate classes fish and amphibians It overcomes the differing theoretical and experimental paradigms that underlie most work on these groups and treats both fish and amphibians together in most chapters in order to address broader comparative issues **Insect Sounds and Communication** Sakis Drosopoulos, Michael F. Claridge, 2005-11-02 While we may have always assumed that insects employ auditory communication our understanding of it has been impeded by various technical challenges In comparison to the study of an insect's visual and olfactory expression research in the area of acoustic communication has lagged behind Filling this void *Insect Sounds and Communication* is the *Advances in the Study of Behavior*, 2011-05-12 *Advances in the Study of Behavior* was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This volume makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal

behavior and to their colleagues in neighboring fields *Advances in the Study of Behavior* is now available online at ScienceDirect full text online from volume 30 onward *Animal Behavior* Ken Yasukawa, 2014-01-22 Discover why animals do what they do based on their genes physiologies cultures traditions survival and mating advantages and evolutionary histories and find out how studying behavior in the animal world helps us understand human behavior The three volumes of *Animal Behavior How and Why Animals Do the Things They Do* cover the breadth of the field addressing causation development function and evolution in a wide range of animals from invertebrates to humans Inspired by Nobel laureate Nikolaas Tinbergen's work the first two volumes follow Tinbergen's four classic questions of animal behavior while the third volume supplies integrated examples of Tinbergen's investigative process applied in specific cases Written in an engaging accessible manner ideal for college students as well as general audiences this evidence based collection provides a fascinating tour of animal behaviorists findings such as how animal communication can be truthful or deceitful the deadly serious business behind clashes in the battle of the sexes and how documentation of animal behavior can lead to a deeper understanding of human behavior Each chapter provides both historical background and information about current developments in animal behavior knowledge *Marriage and Worship in the Early Societies* James George Frazer, 1986

variety of sex dimorphic traits Reviewing theoretical and empirical work in this very active field Malte Andersson a leading contributor himself provides a major up to date synthesis of sexual selection The author describes the theory and its recent development examines models methods and empirical tests and identifies many unsolved problems Among the topics discussed are the selection and evolution of mating preferences relations between sexual selection and speciation constraints on sexual selection and sex differences in signals body size and weapons The rapidly growing study of sexual selection in plants is also reviewed This volume will interest students teachers and researchers in behavioral ecology and evolutionary biology
