Mathematical Foundations For Computational Engineering A Handbook:

Mathematical Foundations of Computational Engineering Peter J. Pahl, Rudolf Damrath, 2012-12-06 Computational engineering is the treatment of engineering tasks with computers. It is based on computational mathematics which is presented here in a comprehensive handbook. Engineers and scientists who deal with engineering tasks have to handle large amounts of information which must be created and structured in a systematic manner. This demands a high level of abstraction and therefore knowledge of the mathematical foundations. From the existing rich repertoire of mathematical theories and methods the fundamentals of engineering computation are selected and presented in a coherent fashion. They are brought into a suitable order for specific engineering purposes and their significance for typical applications is shown. The relevant definitions, notations and theories are presented in a durable form which is independent of the fast development of information and communication technology.

The History of the Theory of Structures Karl-Eugen Kurrer, 2018-07-23 Zehn Jahre nach der 1. Auflage in englischer Sprache legt der Autor sein Buch *The History of the Theory of Structures* in wesentlich erweiterter Form vor. Nunmehr mit dem Untertitel *Searching for Equilibrium*. Mit dem vorliegenden Buch lädt der Verfasser seine Leser zur Suche nach dem Gleichgewicht von Tragwerken auf Zeitreisen ein. Die Zeitreisen setzen mit der Entstehung der Statik und Festigkeitslehre eines Leonardo und Galilei ein und erreichen ihren ersten Höhepunkt mit den baustatischen Theorien über den Balken, Erddruck und das Gewicht von Coulomb am Ende des 18. Jahrhunderts. Im folgenden Jahrhundert formiert sich die Baustatik mit Navier, Culmann, Maxwell, Rankine, Mohr, Castigliano und Müller-Breslau zu einer technikwissenschaftlichen Grundlagendisziplin, die im 20. Jahrhundert in Gestalt der modernen Strukturmechanik bei der Herausbildung der konstruktiven Sprache des Stahl, Stahlbeton, Flugzeug, Automobil und des Schiffbaus eine tragende Rolle spielt. Dabei setzt der Autor den inhaltlichen Schwerpunkt auf die Formierung und Entwicklung moderner numerischer Ingenieurmethoden wie der Finite-Elemente-Methode und beschreibt ihre disziplinäre Integration in der Computational Mechanics. Kurze, durch historische Skizzen unterstützte Einblicke in gängige Berechnungsverfahren erleichtern den Zugang zur Geschichte der Strukturmechanik und Erddrucktheorie vom heutigen Stand der Ingenieurpraxis und stellen einen auch einen wichtigen Beitrag zur Ingenieurpädagogik dar. Dem Autor gelingt es, die Unterschiedlichkeit der Akteure hinsichtlich ihres technisch-wissenschaftlichen Profils und ihrer Persönlichkeit plastisch zu schildern und das Verständnis für den gesellschaftlichen Kontext zu erzeugen. So werden in 260 Kurzbiografien die subjektive Dimension der Baustatik und der Strukturmechanik von der frühen Neuzeit bis heute entfaltet. Dabei werden die wesentlichen Beiträge der Protagonisten der Baustatik besprochen und in die nachfolgende Bibliografie integriert. Berücksichtigt wurden nicht nur Bauingenieure und Architekten, sondern auch Mathematiker, Physiker, Maschinenbauer sowie Flugzeug- und Schiffbauer. Neben den bekannten Persönlichkeiten der Baustatik wie Coulomb, Culmann, Maxwell, Mohr, Müller-Breslau, Navier, Rankine, Saint-Venant, Timoshenko und Westergaard wurden u.a. auch G. Green, A. N. Krylov, G. Li, A. J. S. Pippard, W. Prager, H. A. Schade, A. W. Skempton, C. A. Truesdell

Observer Design for Control and Fault Diagnosis of Boolean Networks Zhihua Zhang,2021-12-11 Boolean control networks BCNs are a kind of parameter free model which can be used to approximate the qualitative behavior of biological systems After converting into a model similar to the standard discrete time state space model control theoretic problems of BCNs can be studied In control theory state observers can provide state estimation for any other applications Reconstructibility condition is necessary for the existence of state observers In this thesis explicit and recursive methods have been developed for reconstructibility analysis Then an approach to design Luenberger like observer has been proposed which works in a two step process i e predict and update If a BCN is reconstructible then an accurate state estimate can be provided by the observer no later than the minimal reconstructibility index For a wide range of applications the approach has been extended

to enable design of unknown input observer distributed observers and reduced order observer The performance of the observers has been evaluated thoroughly Furthermore methods for output tracking control and fault diagnosis of BCNs have been developed Finally the developed schemes are tested with numerical examples
