Mathematical Modeling For System Analysis In Agricultural Research:

Mathematical Modeling for System Analysis in Agricultural Research K. Vohnout, 2003-03-27 This book provides a clear picture of the use of applied mathematics as a tool for improving the accuracy of agricultural research For decades statistics has been regarded as the fundamental tool of the scientific method With new breakthroughs in computers and computer software it has become feasible and necessary to improve the traditional approach in agricultural research by including additional mathematical modeling procedures The difficulty with the use of mathematics for agricultural scientists is that most courses in applied mathematics have been designed for engineering students This publication is written by a professional in animal science targeting professionals in the biological namely agricultural and animal scientists and graduate students in agricultural and animal sciences The only prerequisite for the reader to understand the topics of this book is an introduction to college algebra calculus and statistics This is a manual of procedures for the mathematical modeling of agricultural systems and for the design and analyses of experimental data and experimental tests It is a step by step guide for mathematical modeling of agricultural systems starting with the statement of the research problem and up to implementing the project and running system experiments

Decision Analysis through Modeling and Game Theory William P. Fox, 2024-11-08 This unique book presents decision analysis in the context of mathematical modeling and game theory The author emphasizes and focuses on the model formulation and modeling building skills required for decision analysis as well as the technology to

support the analysis The primary objective of Decision Analysis through Modeling and Game Theory is illustrative in nature It sets the tone through the introduction to mathematical modeling The text provides a process for formally thinking about the problem and illustrates many scenarios and illustrative examples These techniques and this approach center on the fact a decision makers at all levels must be exposed to the tools and techniques available to help them in the decision process b decision makers as well as analysts need to have and use technology to assist in the entire analysis process c the interpretation and explanation of the results are crucial to understanding the strengths and limitations of modeling and d the interpretation and use of sensitivity analysis is essential The book begins with a look at decision making methods including probability and statistics methods under risk of uncertainty It moves to linear programming and multi attribute decision making methods with a discussion of weighting methods Game theory is introduced through conflict games and zero sum or constant sum games Nash equilibriums are next followed by utility theory Evolutionary stable strategies lead to Nash arbitration and cooperation methods and N person methods presented for both total and partial conflict games Several real life examples and case studies using game theory are used throughout This book would be best used for a senior level course in mathematics operations research or graduate level courses or decision modeling courses offered in business schools The book will be of interest to departments offering mathematical modeling courses with any emphasis on modeling for decision making

Hudson,2018-01-18 Bioenergetics is an emerging discipline which offers a more profound understanding of the ecology behaviour and evolution of wild herbivores Increasingly bioenergetic principles have been applied in management since they provide insight into population dynamics and are relevant to manipulation of habitats and assessment of the impacts of resource development Growing interest in the agricultural potential of wild herbivores has provided further impetus In spite of this promise there are few comprehensive syntheses of the concept and its application to wild herbivores This volume attempts to fill this need This book provides a great amount of detail but its expressive aim is to lead us to the whole animal to a herd to population as integral parts of an ecological entity which in turn is the result of evolutionary forces The concept of this book promises the realization of an overdue change in the approach to bioenergetics to nutrition and husbandry and thus to the management of wild herbivores the final emancipation from rules and views based primarily on domesticated herbivores or on experimental animals held under unnatural conditions necessarily impeding them behaviourally physically and psychically
