Mathematical Quickies Charles W. Trigg, 1985 For the mathematics enthusiast of any age or level of sophistication this stimulating treasury of unusual math problems offers unlimited opportunity for mind boggling recreation Charles W Trigg Dean Emeritus and Professor Emeritus at Los Angeles City College and one of the country's best known problemists has compiled nearly 300 mathematical brainteasers from the field of arithmetic algebra plane and solid geometry trigonometry number theory and such general recreational mathematics and dissections cryptarithms and magic squares The object of each problem is to find the quickest most elegant solution they are often unorthodox and there is usually an element of surprise in each Ranging from the simple to complex problems are both original with the author and the work of over 100 other qualified mathematicians Most are rarely seen or entirely new all challenge the reader to devise solutions more elegant than the ones provided *Mathematical Quickies* Charles W. Trigg, 2007-10-26 *Intriguing Mathematical Problems* Oswald Jacoby, William H. Benson, 2013-05-23 Treasury of challenging brainteasers includes puzzles involving numbers letters probability reasoning more The Enterprising Snail The Fly and the Bicycles The Lovesick Cockroaches many others No advanced math needed Solutions [Impossible Folding Puzzles and Other Mathematical Paradoxes](#) Gianni A. Sarcone, Marie-Jo Waeber, 2014-02-20 Do all problems have solutions Is complexity synonymous with difficulty This original collection of mathematical puzzles and paradoxes proves that things aren't always what they seem Readers will discover that nothing is as easy or as difficult as it looks and that puzzles can have one several or no solutions The fun filled puzzles begin with The Tricky Hole a challenge that involves pushing a large coin through a small hole in a sheet of paper without ripping or making any cuts in the paper Advance to the Elastic Playing Card in which it's possible to cut a hole into a playing card big enough for someone to climb through Other incredible puzzles include Elephants and Castles Trianglized Kangaroo Honest Dice and Logic Dice Mind reading Powers and dozens more Complete solutions explain the mathematical realities behind the fantastic sounding challenges **Mathematical Recreations and Essays** Walter William Rouse Ball, Harold Scott Macdonald Coxeter, 1987-01-01 This classic work offers scores of stimulating mind expanding games and puzzles arithmetical and geometrical problems chessboard recreations magic squares map coloring problems cryptography and cryptanalysis much more A must to add to your mathematics library The Mathematics Teacher Index References for Further Study Includes 150 black and white line illustrations [The Bogotá Puzzles](#) Bernardo Recamán, 2020-10-14 A Colombian mathematician and professor assembled these 80 brainteasers while living in Bogotá forming a stimulating collection of word problems puzzles involving chess pieces sudoku style challenges other math based diversions Solutions included **Ruler and the Round** Nicholas D. Kazarinoff, 2012-09-11 An intriguing look at the impossible geometric constructions those that defy completion with just a ruler and a compass this book covers angle trisection and circle division 1970 edition [Masters of Mathematics](#) Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why

You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics
